

He will remain a well-remembered Professor, particularly by those who were his students, because the Charlesworth forthrightness and bold vision never failed to make its impact.

University of Pennsylvania

R. William Gilmore

R. William Gilmore, Associate Professor of Political Science at the University of Toledo, passed away on March 10, 1974. He is survived by his widow, Joan, his children Kevin and Kristin, his parents, and a brother and sister. Death came from complications following surgery, and his unexpected passing has saddened and diminished us all.

Born in Hamilton, Ohio, December 19, 1934, Professore Gilmore attended Miami University in Oxford. (B.A., 1956). After military service that included a tour of duty in Germany, he took graduate degrees from Ohio State University (M.A., 1959) and from the University of Pittsburgh (Ph.D., 1967). It was while a doctoral candidate that Bill came to the University of Toledo in the Summer of 1962. He served on this faculty with distinction for more than eleven years.

As with all of us, there were many facets to Bill's life, and any tribute such as this can only suggest who he was and what he stood for. Such words as kindness, intelligence and integrity can serve as an introduction. As a teacher, he was an excellent and popular lecturer who read widely in his field of international relations. His energy and time were expended willingly as an undergraduate adviser and architect of the Center for International Studies. As a colleague, he was always there with a helpful suggestion. He participated in more than his share of the tedious committee work that lurks in academe. Outside of the University, he was a frequent speaker before civic groups and was active in the Council on World Affairs. A deacon in the United Presbyterian Church for seven years, Bill was active personally in contributing to the well-being of the elderly. He was a devoted husband and father, and was always looking to the future.

We never fully understand how our lives interact with one another — how we affect each other. But in his brief life, Bill Gilmore did his share and more. He wanted to know, to dispel ignorance, and to pass on to others that which he had learned. He was ever a teacher and a friend. We miss him.

John Hanessian, Jr.

The Political Science community, and particularly those concerned with science policy, lost a highly valued colleague and supporter when John Hanessian, Jr. was killed in the crash of a DC-10 Turkish airliner near Paris on March 3, 1974. John was working at the National Science Foundation, on leave from George

Washington University where he was senior staff scientist in the University's Program of Policy Studies in science and technology. At the Foundation, he served as a program manager in the Office of Exploratory Research and Problem Assessment, with primary responsibility for creating a new research program on transnational issues raised by science and technology.

For the last two years, John Hanessian had been working with astonishing energy, enthusiasm and competence to develop this new program under the RANN (Research Applied to National Needs) program of NSF. The U.S. Government had never before recognized in a coherent way the importance of developing a program of studies of international issues influenced or created by developments in science and technology. John was determined to do it right, and had been making excellent progress in identifying priority issues, planning a broad spectrum of research projects, and obtaining the necessary resources. He involved the academic and research community directly in his efforts; though he provided the leadership.

In exercising this leadership, he was committed to the idea that it was essential for us to understand better technologically-related international issues, in particular political issues, and to explore policy options, because these issues loomed so large in the future for the nation and the world. This commitment followed naturally from his long, active and varied career as a teacher, researcher and administrator, all of it illuminated by a deep humanitarian concern in people, and by the belief that it is possible to solve man's problems through intelligent and cooperative action.

Born in Syracuse, N.Y., Mr. Hanessian graduated from Syracuse University after serving with the Army during World War II. He took further studies at North Carolina State College, the University of Strasbourg in France and the Johns Hopkins School of Advanced International Studies and had completed his doctorate requirements in international law at Cambridge University in England.

He was on the staff of the National Academy of Sciences from 1954 to 1958 and visited both the North and South Poles during the International Geophysical Year. From 1960 to 1964, Mr. Hanessian was a staff associate with the American Universities Field Staff in New York. In this capacity, he was a visiting professor at American University of Beirut in Lebanon for two years and also did research for AUFS in the Middle East, Russia, Europe and the Pacific area. He lectured at numerous universities and colleges in this country. Before coming to Washington, Mr. Hanessian had taught at the University of Alabama, the University of Hawaii and California State College at Los Angeles and at Long Beach. He also had been acting director of the Arms Control Study Group, California Institute of Technology — Jet Propulsion Laboratory in Pasadena, and was the author of or contributor to numerous publications on arms control, outer space affairs, international politics and law and Middle East affairs.
