

BSHS Monographs

THE British Society for the History of Science is publishing a monograph series of extended scholarly studies which further the discipline of history of science. The series is self-financing and non-profit making, and aims to make studies available at the lowest cost compatible with proper presentation. All subjects within the broad field of history of science will be considered. The length of monographs should be between 40,000 and 100,000 words.

All inquiries concerning editorial matters, and suggestions for possible monographs, should be addressed to the Series Editor,

Roger Smith, Department of History, University of Lancaster,
Bailrigg, Lancaster LA1 4YW, England.

Orders for monographs should be addressed to

The Administrator, The British Society for the History of Science,
Halfpenny Furze, Mill Lane, Chalfont St Giles, Bucks HP8 4NR,
England.

Postage is included in the monograph price, but orders must be prepaid. (Please add the equivalent of £0.60 to foreign cheques to cover the additional bank charges involved.) Alternatively, orders may be placed with any bookshop. Monographs are available to members of BSHS at 25% discount, cash with order, direct from The Administrator only.

The first title is *Images of the earth: essays in the history of the environmental sciences*, edited by L. J. Jordanova and Roy Porter, June 1979, pp. xx+282, with 10 plates. £5.95 (4.40 to members).

Further titles in preparation for 1979–80 include studies of European science and social thought in the nineteenth century, annotated guides to scientific correspondence, and English translations of important foreign-language studies in the history of science.

New books from **GAMBRIDGE**

What Little I Remember

OTTO FRISCH

In this delightful autobiography Otto Frisch relates some of the most exciting developments of modern physics, including the discovery of nuclear fission, a term he himself coined. His vivid description of those heady days which saw the birth of radio-astronomy, the unravelling of the double helix and the making of the first atomic bomb creates the background for his pen portraits, enlivened by entertaining anecdotes of the many great scientists he has met, including Einstein, Bohr and Oppenheimer. His lively account will be enjoyed by scientists and non-scientists alike. **£9.50 net**

The Post-Darwinian Controversies

A study of the Protestant struggle to come to terms with Darwin in Great Britain and America, 1870-1900

JAMES R. MOORE

Victorian controversies between science and religion have been the subject of many scholarly studies, but no book has yet appeared which treats in detail the well known religious debates over evolution in the latter decades of the nineteenth century. This volume offers an original interpretation of Protestant responses to Darwin after 1870, viewing them in a transatlantic perspective and as a constitutive part of the history of post-Darwinian evolutionary thought. The detailed and scholarly treatment of this interesting topic will be invaluable to historians of science and theology and to social historians. **£18.00 net**

Arch Bridges and their Builders 1735-1835

TED RUDDOCK

This book provides a comprehensive study of bridge building during the period 1735-1835, treating the administration and financing of projects as well as the designs and methods of construction. All the bridges described are of interest as engineering works, and some are of architectural interest because of their grandeur and beauty. The book includes many narratives of individual bridge projects, both famous and relatively unknown. Historians, industrial archaeologists, architects and engineers as well as general readers will enjoy this highly readable and beautifully illustrated book. **£30.00 net**

CAMBRIDGE UNIVERSITY PRESS

Einstein

A Centenary Volume

Edited by A. P. FRENCH

An illustrated collection of new essays, reminiscences, quotations, and abstracts compiled to commemorate the centenary of Einstein's birth. 'There is something for almost everyone here, from banal reminiscence by famous people who scarcely knew Einstein to lucid exposition of his most serious work.'

David Fishlock, Financial Times

'The rich variety of the articles in this book provides something to interest everyone who wants to know about this remarkable man.'

Peter Hodgson, New Scientist

'A wealth of contemporary material exists on Einstein's life and it is from the best of this that this book has been assembled.'

Prof. Sir Fred Hoyle, Evening News cased **£10.50** net

A History of Microtechnique

BRIAN BRACEGIRDLE

This handsomely illustrated book is invaluable for an understanding of the process of microscopy. It provides a comprehensive reference for the historian of science and medicine, as well as the collector.

'The book is well produced and contains both name and subject indices together with citations of over 1,000 original books and articles . . . Here we have a work which is sure to remain the standard reference in this field for many years to come.'

Savile Bradbury, Nature cased **£22.50** net

An Illustrated History of Science

F. SHERWOOD TAYLOR

Illustrated by A. R. THOMPSON

A world-famous scientific historian and an equally renowned artist collaborated to produce this unique book now available in paperback for the first time. It both describes and illustrates the growth of science from ancient Egypt to the mid-twentieth century. paper **£2.50** net

The Common Sense of Science

JACOB BRONOWSKI

'This is a delightful book . . . (which) analyses the evolution of scientific thinking in a language common to us all'. From a foreword by Sir Hermann Bondi. paper **£1.50** net

HEINEMANN EDUCATIONAL BOOKS

22 Bedford Square, London WC1B 3HH

Oxford University Press

Soviet Science

Zhores A. Medvedev

In this short history of science in the Soviet Union the emphasis is on the interaction between scientific and technological developments and the political objectives of the Soviet government. It tells of the persecution and survival of the scientific community under different periods of political pressure. £5.95.

Black-Body Theory and the Quantum Discontinuity, 1894-1912

Thomas S. Kuhn

The author of *The Structure of Scientific Revolutions* and *The Copernican Revolution* has now produced a monograph on the development of quantum conditions, a central theme in the evolution of the quantum theory. It provides a strategic survey of the development of that theory, tracing Planck's route to the black-body problem through the classical phase to the breakdown of his theory and Einstein's new approach. £12.50.

The British Electrical Industry 1875-1914

The Economic Returns to a New Technology

I. C. R. Byatt

This book discusses the interaction of technology and economics in the early development of the use of electricity. It provides an economic history of electricity supply and electrical manufacturing in Britain to 1914, and shows the international setting of the industry and British dependence on the United States and Germany. £8.50.

A Bibliography of Books on Symbolic Logic

including Foundations of Mathematics, Philosophy of Logic and of Mathematics and History of Logic

Michael Moss and Dana Scott

The period covered is roughly from 1830 to 1975, and there are more than 5,000 references to books published in English, French, German, and Italian. Each section has an introduction and cross-references. £10.00.

BSHS LIST OF THESES

A list of theses and dissertations in history of science in British universities in progress or recently completed, No. 9, Session 1978–79, compiled for the British Society for the History of Science by J. B. Morrell, University of Bradford, is now available from the Society's Administrator. It contains 479 entries, and is free to members of the Society. The charge to non-members is £1.00 or \$3.00, post paid.

The British Society for the History of Science

LIKE the discipline which it represents, the British Society for the History of Science has grown considerably since its foundation in 1947. The object of the Society is to further the discipline in all possible ways, particularly by holding meetings for the reading and discussion of papers, and by publication of relevant material. The Society offers a forum for all who have an interest in the history of science; although it is based in Britain, its membership is international. It welcomes applications for membership from students as well as established scholars, and from non-specialists as well as professional historians of science.

Membership of the Society, which includes a subscription to *The British Journal for the History of Science*, is open to all persons approved by the Council of the Society and elected at an ordinary meeting (formalities required by the UK Companies Act). The annual subscription is £9.00 (US \$21.00 in the Americas, Canada, and Japan) or, for students, £3.00 (\$9.00).

Applications for membership should be made on a form which is available from the Society's **Administrator** at the address below.

Meetings: The Society mounts an ambitious programme of meetings. The pattern is flexible, the only fixture being the three-day summer meeting, held at a different British university or polytechnic each year. About four other meetings, lasting for between one and three days, are held during the year, sometimes devoted to a clearly-defined theme or an important anniversary, and often arranged in conjunction with other scholarly societies.

The British Journal for the History of Science is the official organ of the Society. It is published three times a year, in March, July, and November, and the three parts constitute a volume. Articles and reviews range over all aspects of the history of science, and many are interdisciplinary in character, encompassing social and economic history, the philosophy and sociology of science, the history of technology, and the relations between science and theology. Contributions from members and non-members are welcomed alike.

Editorial matters: Papers for inclusion in the *Journal* should be submitted to the Editor, **Dr Nicholas Fisher, Department of History and Philosophy of Science, King's College, Aberdeen AB9 2UB, Scotland**, from whom instructions may be obtained concerning the presentation and documentation of papers. All correspondence on the contents of the *Journal*, and all books for review, should be addressed to the Editor.

Advertising: Particulars about advertising in the *Journal* may be obtained from the Society's **Administrator**.

Orders and back issues: Orders for the *Journal* and inquiries about back issues should be addressed to the **Administrator**. Claims for missing copies should be made within six months of publication. The annual subscription for non-members is £12.00 (\$30.00).

Other publications: **BSHS Monograph Series** is designed to allow the publication of monographic studies in the history of science quickly and cheaply. All correspondence on the subject of monographs, and any new suggestions for titles, should be sent to the Series Editor, **Dr Roger Smith, Department of History, University of Lancaster, Bailrigg, Lancaster LA1 4YG, England**. Monographs are available to members at a discount of 25%, post-free from the Society's **Administrator**. Non-members may obtain them through bookshops, or post-free from the **Administrator**.

Now available:

Images of the earth: essays in the history of the environmental sciences. Ed. by L. J. Jordanova and R. Porter, £5.95 (£4.40 to members).

List of theses: Every December, the Society publishes a full list of current theses in history of science in British universities. This is available free to members, and at a small charge to non-members, on request to the **Administrator**. Standing orders are accepted from members or non-members who wish to receive the list regularly.

All the administrative business of the Society is handled by **The Administrator, The British Society for the History of Science, Halfpenny Furze, Mill Lane, Chalfont St Giles, Bucks HP8 4NR, England**.
