## **Agricultural Research Alternatives**

**William Lockeretz and Molly D. Anderson**

Entrenched ideas about the way agricultural research is conducted have been challenged by farmers, environmentalists, food-safety advocates, rural activists, and others. William Lockeretz and Molly D. Anderson meet these challenges and chart a reasoned course through the fray. They analyze the potential and the limits of various research approaches associated with alternative agriculture: multidisciplinary research, application of ecological principles in designing agricultural systems, emphasis on the use of agricultural information, use of working farms as research sites, and the involvement of farmers in agricultural research. \$30.00

## **Crop Improvement for Sustainable Agriculture**

**Edited by M. Brett Callaway and Charles A. Francis**

Eighteen noted researchers currently working in plant breeding and related fields bring together the best thinking about achieving crop improvement—especially the development of new hybrid strains—to create a sustainable agriculture. \$35.00
