

# STATISTICAL METHODS FOR THE EARTH SCIENTIST

An Introduction

Roger Till

This introduction to statistics for second, third year and graduate students in the earth sciences explains the theory and practice of statistical tests. These include probability, distribution, sampling and tests of significance, correlation, regression and variance analysis – all are illustrated by data from all branches of the earth sciences. It is the only introductory text of its kind, providing a clear understanding of the basis, utility and limitations of each test and serving as a core-text for courses beginning with elementary techniques and developing to the frontier of graduate studies.

£5.00 paperback £2.50

## A Geology for Engineers

*Sixth Edition*

F. G. H. BLYTH AND M. H. DE FREITAS

The issue of a sixth edition of this book bears witness to the esteem in which it is held by generations of engineers and geologists. Under joint authorship, the book has been extensively revised to include much new information. All units, except those quoted from actual case histories conform to the SI.

Much new information is presented on geological features of relevance to the excavation of materials (including drilling), underground works, dam construction, reservoirs (above and below ground) and to industrial and urban development of land.

All chapters conclude with a comprehensive reference list, and many have additional notes expanding on the preceding text discussion. Sources of geological information are listed in the Appendix.

## CIRA 1972

Cospar International Reference Atmosphere 1972

Compiled by The Committee for the COSPAR International Reference Atmosphere (CIRA) of Cospar Working Group 4

Committee on Space Research

Established by the International Council of Scientific Unions 1972.

XX, 450 pages, 119 illustrations, 39 tables, large octavo, cloth, M.58.–

Order No.: 761 869 2 (6127)

CIRA 1972 has been prepared in English by an international team of authors on behalf of COSPAR. Latest data measured by various approaches, including satellites, space probes, and missiles, in the higher atmosphere are compiled and interpreted in several contributions. Included are numerous diagrams and tables with explanations on the basis of calculations by means of electronic data processing techniques. Scientists interested in research of the atmosphere in the widest sense will find in this book reference values for the standard atmosphere.

For the time being, CIRA 1972 is the only valid model for the Earth's atmosphere, an important reference work indispensable to research workers throughout the world.

## COSPAR

Symposium on Approaches to Earth Survey Problems through the Use of Space Techniques

Proceedings of the Symposium held in Constance, FRG, 23–25 May 1973

Edited by P. Bock

With the assistance of F. W. G. Baker and S. Ruttenberg

1974. Approx. 620 pages, 220 illustrations, 28 tables, large octavo, cloth, approx. M 50.–

Order No. 761 927 3 (6201)

This book, fully published in English, offers several papers by selected competent experts in various disciplines on aspects relating to applications of space missions of relevance to environment research, as conducted in all countries, today. Reference is made to a wide range of issues, including air and water pollution, infestation of monocultures with certain pathogens, coastline protection, reconnaissance for exploration of raw materials, as well as problems of meteorology and oceanography.

# COSPAR

Symposium on Methods of Measurements and Results of Lower Ionosphere Structure

Proceedings of the Symposium held in Constance, FRG, 23–26 May 1973

Edited by K. Rawer

Sponsored by International Union of Radio Science (URSI); Committee on Space Research (COSPAR); International Association of Geomagnetism and Aeronomy of the International Union of Geodesy and Geophysics, (IAGA/IUGG)

1974. Approx. 430 pages, illustrations, tables, large octavo, cloth, approx. M 60.–

Order No.: 761 928 1 (6202)

Papers delivered at this specialised symposium held in the framework of the General Assembly of COSPAR, 1973, and reflecting the latest findings in physics of the higher atmosphere are compiled in this book. All are printed in English. The lower ionosphere is identical with that part of the higher atmosphere which is of greatest interest when it comes to missions with artificial Earth satellites involved. Therefore, closer studies into this layer may be helpful in drawing workable conclusions as to more purpose-oriented use of artificial satellites.

Kindly place your orders through your local stockist. We shall be glad to send you more sales information free of charge and on request.

**Zeitschrift für geologische Wissenschaften**  
*(Journal for Geological Sciences)*

Published by Vorstand der Gesellschaft für Geologische Wissenschaften der DDR

Monthly, 128 pages, 16·7 × 24 cm, illustrations, M 12.–, preferential price for members: M 8.–

Order No.: 1022

This journal is published to serve as a platform for scientific discussion in the entire field of geological research. It is a tool for nationwide scientific exchange. The body of periodical publications formerly sponsored by Gesellschaft für Geologische Wissenschaften has been reorganised and, as a result, is now being replaced by this journal, an expression of more concentrated effort which is hoped to yield favourable results in terms of interdisciplinary co-operation between all facets of geological research. Published are original papers, summaries, as well as reports and reviews. The publication language is German, but English and Russian contributions will be accepted in exceptional cases.

Orders should be placed with a bookseller. Write for free pamphlets or our Catalogue of Journals with all details.

## NOTES FOR CONTRIBUTORS

Contributions for publication should be addressed to The Editors, Geological Magazine, Sedgwick Museum, Downing Street, Cambridge, CB2 3EQ, England.

All contributions, whether articles, correspondence or reviews, must be typed in duplicate on one side of the paper, double spaced throughout, with a wide margin on the left of each page and a narrower margin on the right. Any minor corrections should be made neatly in the typescript, leaving the margins clear.

Articles must be accompanied by a brief summary. Contributions should follow the general style of papers in recent issues of the Magazine and the principles laid down in *Notes to Authors* (*Proc. Geol. Soc. Lond.*, No. 1627. Oct. 1965). Headings should be set out clearly, but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; sub-headings should be numbered 2.a, 2.b, etc., and tertiary headings 2.a.1., 2.a.2. No cross references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section 2.a.1. The total length of a paper should not in general exceed 20 pages of the Geological Magazine; preference and priority are given to short papers. The accuracy of references is the responsibility of authors. References must be double spaced and abbreviated in the form of the *World List of Scientific Periodicals* 4th Edition as far as possible, e.g. Lapworth, C. 1878. The Moffat Series. *Q. Jl geol. Soc., Lond.* **34**, 240–343. Books should be cited briefly as: Burns, R. G. 1970. *Mineralogical applications of crystal field theory*. 224 p., C.U.P., London. Unpublished work, e.g. from theses, should normally be referred to in the text in parentheses and not included in the reference list unless in the press.

Illustrations must be drawn to allow reduction to maximum size of 165 mm × 110 mm; originals must not exceed 495 mm × 330 mm and must be sent in a flat package. Lettering must allow for legibility after reduction (i.e. equivalent to 1 mm as a minimum on reduction). Duplicates of illustrations may be prints or, preferably, reductions. Metric units of the SI system are preferred. Illustrations in the text will be referred to as figures (Fig. 2, 2a, etc.), and halftone plates will be referred to (also in arabic) as Plates 2, 2a, etc. Folding plates will not be accepted. Captions for figures and plates must be typed on separate sheets.

Twenty-five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges.
