

## INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,  
Department of Mathematics, The University of Queensland,  
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

### EDITORIAL POLICY

**1. References.** Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

### 2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

**3. Subject Classification.** Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

**4. Abstracts of Ph.D. Theses.** The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

**5. Electronic Manuscripts.** The Bulletin is produced using  $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$ . Authors who are able to do so are invited to prepare their manuscripts using  $\mathcal{T}\mathcal{E}\mathcal{X}$ . (We accept Plain  $\mathcal{T}\mathcal{E}\mathcal{X}$ ,  $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$  or  $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to [ams@maths.uq.edu.au](mailto:ams@maths.uq.edu.au). [Typed manuscripts are, of course, still acceptable.]

# Bulletin of the Australian Mathematical Society

<b>The heat flows and harmonic maps from complete manifolds into regular balls</b> Jiayu Li and Silei Wang	177
<b>G-Fonctions et cohomologie des hypersurfaces singulières II</b> Cristiana Bertolin	189
<b>Remarks on square functions in the Littlewood-Paley theory</b> Shuichi Sato	199
<b>Pseudo-monotonicity and degenerated or singular elliptic operators</b> P. Drábek, A. Kufner and V. Mustonen	213
<b>A stable finite difference ansatz for higher order differentiation of non-exact data</b> Bob Anderssen, Frank de Hoog and Markus Hegland	223
<b>Nilpotent quotients of fundamental groups of special 3-manifolds with boundary</b> Gabriela Putinar	233
<b>Tail probabilities for weighted sums of products of normal random variables</b> B. Gail Ivanoff and N.C. Weber	239
<b>Abstract reflexive sublattices and completely distributive collapsibility</b> W.E. Longstaff, J.B. Nation and Oreste Panaia	245
<b>Jones polynomials of periodic knots</b> Yongju Bae, Young Kon Kim and Chan-Young Park	261
<b>Discrete quadratic estimates and holomorphic functional calculi in Banach spaces</b> Edwin Franks and Alan McIntosh	271
<b>Holomorphic functional calculi and sums of commuting operators</b> David Albrecht, Edwin Franks and Alan McIntosh	291
<b>Stability of discrete orthogonal projections for continuous splines</b> R.D. Grigorieff and I.H. Sloan	307
<b>Remarks on the pure critical exponent problem</b> E.N. Dancer	333

## ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

<b>Combinatorial identities in number theory related to <math>q</math>-series and arithmetical functions</b> Geoffrey Bruce Campbell	345
<b>Three topics in topology and group theory</b> John Crisp	349
