REVIEW.

New and Non-Official Remedies, 1911. Chicago: Press of the American Medical Association, 1911.

By a very happy inspiration a council of pharmacy and chemistry was established in February, 1905, by the American Medical Association for purpose of gathering disseminated information for the protection of the medical profession and the prescribing of proprietary medicinal articles. The work now before us contains descriptions of the articles which have been examined by this council, and it will certainly be admitted by even the most pushing of drug manufacturers that the subject has been dealt with in a large-minded and catholic spirit. We can scarcely think of a drug with an artificial title which is absent from this book either under its trade name or its true chemical one. In the body of the book, which is alphabetically arranged, we certainly miss anæsthesin under that name, but in the index we are referred to its full-dress title of ethylaminobenzoate. In addition to the list of new and non-official remedies which from their descriptions, usefulness, title and mode of advertising, the council fully approves, there is an appendix containing proprietary articles arranged under the names of the manufacturers or their agents, which, though complying with the rules, do not seem to possess sufficient originality to be admitted to the body of the book. Among these we observe agar-agar combined with cascara sagrada under the denomination of regulin. It is interesting to observe the numerous names applied by different manufacturers to the agents extracted from the supra-renal bodies. The day has gone by when proprietary remedies are placed under a ban, and the practitioner will find it of great advantage to have this more or less official guide to the selection of new and non-official remedies.

THE NATIONAL BUREAU FOR PROMOTING THE GENERAL WELFARE OF
THE DEAF.

At a meeting held on June 9, 1911, at 22, Upper Brook Street, London (the house of Mr. Leo Bonn), it was decided to inaugurate a bureau, as above, for the following purposes:

To get into touch and co-operate with all existing agencies and charities for the improvement of the deaf and to consider the question of overlapping. To collect all information available from annual reports, periodicals, daily papers, government publications—home and foreign—and to classify such information and to keep it available for members of the Bureau. To make special studies of any problem affecting the deaf which may recommend itself for the purposes of investigation, and to submit the results of such investigation to the Council for the purposes of public and private propaganda of suggestions or reforms.

The Bureau will be established in London, and its management will be vested in a council and an executive committee, among the members of which we observe the names of Dr. Kerr Love and Mr. Macleod Yearsley.

We understand that Mr. Bonn has generously offered to establish and maintain the undertaking for two years.
