

## Instructions for Authors

**Editorial policy** The journal welcomes submissions in any of the areas of plasma physics. Its scope includes experimental and theoretical work on basic plasma physics, the plasma physics of magnetic and inertial fusion, laser–plasma interactions, industrial plasmas, plasma devices and plasmas in space and astrophysics. This list is, of course, merely illustrative of the wide range of topics on which papers are invited, and is not intended to exclude any aspect of plasma physics that is not explicitly mentioned.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Journal of Plasma Physics* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editors' decision on the suitability of a manuscript for publication is final.

**Submission of manuscripts** Papers may be submitted to the Editor or any of the Associate Editors, preferably by email in pdf format. When a paper is accepted, the authors will be asked to supply source files in LaTeX or Word. Instructions for the preparation of these files and LaTeX style files are given in the Instructions for Contributors link at [journals.cambridge.org/pla](http://journals.cambridge.org/pla).

**Incremental publishing and DOIs** In order to make articles which have been accepted for publication in *Journal of Plasma Physics* available as quickly as possible, they are now published incrementally online (at Cambridge Journals Online; [journals.cambridge.org](http://journals.cambridge.org)) The online version is available as soon as author corrections have been completed and before the article appears in a printed issue. A reference is added to the first page of the article in the journal catchline. This is the DOI – Digital Object Identifier. This is a global publishers' standard. A unique DOI number is created for each published item. It can be used for citation purposes instead of volume, issue and page numbers. It therefore suits the early citation of articles which are published on the web before they have appeared in a printed issue. See [journals.cambridge.org/pla](http://journals.cambridge.org/pla).

**Proof reading** Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors.

**Offprints** Corresponding authors will receive a PDF of their article upon publication. Print offprints may be purchased from the publisher if ordered at first proof stage.

**Copying** This journal is registered with the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923. Organizations in the USA who are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per copy fee of \$16.00. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0022–3778/2012 \$16.00.

*ISI Tear Sheet Service*, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorized to supply single copies of separate articles for private use only.

Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions.

*For all other use*, permission should be sought from Cambridge or the American Branch of Cambridge University Press.

# JOURNAL OF PLASMA PHYSICS

VOLUME 78 • PART 5 • OCTOBER 2012

## Research Articles

- Resistive wall mode in cylindrical plasmas in the presence of surface currents  
*Shaoyan Cui, Gaimin Lu and Yue Liu* 501
- Experimental evaluation of protons emission from a plasma focus device  
*M. Bhuyan and S. R. Mohanty* 507
- On unstable electromagnetic radiation through nonlinear wave–particle interactions in presence of drift wave turbulence  
*P. N. Deka and A. Borgohain* 515
- Propagation of solitary waves and shock wavelength in the pair plasma  
*Behrooz Malekolkalami and Taimur Mohammadi* 525
- Dissipative instability under weak beam–plasma coupling  
*Eduard V. Rostomyan* 531
- Quantum statistical properties of free-electron laser with ion-channel guiding  
*H. Mehdian, M. Alimohamadi and A. Hasanbeigi* 537
- Nonlinear low-frequency structures in an electron–positron–ion plasma  
*S. Moolla, I. J. Lazarus and R. Bharuthram* 545
- Terahertz generation by the high intense laser beam  
*Munther B. Hassan, A. H. Al-Janabi, Monika Singh and R. P. Sharma* 553
- Influence of the ion wake-field on the eikonal cross section for the electron–dust collision in dusty plasmas  
*Young-Dae Jung and Woo-Pyo Hong* 559
- An analytical study on the existence of solitary structure at  $M = M_C$   
*Animesh Das, Anup Bandyopadhyay and K. P. Das* 565
- ## Letter
- Role of static inductance on ion beam emission in plasma focus devices  
*Farzin M. Aghamir and Reza A. Behbahani* 585
