

UNIVERSITY OF GEORGIA RADIOCARBON DATES VII

JOHN E NOAKES

Center for Applied Isotope Studies

and

NORMAN HERZ

Department of Geology
University of Georgia, Athens, Georgia 30602

Radiocarbon dates reported in this date list are totally derived from a cooperative effort between the Romanian Institute of Geology and Geophysics and the Center for Applied Isotope Studies (CAIS). The project was carried out between 1972 through 1978. The purpose of the study was to add to the knowledge of the various stages of the Holocene development of the Danube and Black Sea (Ghenea *et al.*, 1971; Panin, 1976).

The Center continues to use the benzene method for sample preparation, liquid scintillation counting, and operational procedures as reported in Date List V (Noakes and Brandau, 1976). Ages quoted for this date list are calculated with a 1σ counting error which includes statistical variation of sample count as well as background and standard. The modern standard used was the 95% NBS oxalic acid with reference year of 1950.

ACKNOWLEDGMENTS

We acknowledge the cooperation of Nicolae Panin, Dan Jipa, Nicolae Mihăilescu, Stefana Panin, and George Salomie of the Romanian Institute of Geology and Geophysics, and Betty Lee Brandau and Donald F Smith of the Center for Applied Isotope Studies in the collection and dating of these samples. Financial support for the work was made possible by two National Science Foundation Grants #GF 35002 and INT 07223 and through the Romanian National Council for Science and Technology.

DANUBE DELTA AND BLACK SEA LITTORAL DEPOSITS

Sample coll from deltaic and shallow marine Black Sea sediments of Danube Delta, fore-delta area, and from borings in fluvial deposits of tributaries of Ialomita R in Romanian sub-Carpathian region. Samples consisted largely of mollusk shells, peat, and some bone. When omitted, geog coordinates are same as previous sample. Depths are given in meters.
