

SUBJECT INDEX VOLUME 46, Nr 1–2

- ΔR , 611–620, 1005–1014
 $\Delta^{14}C$, 595–601, 901–910
 ^{10}Be , 83–88, 445–454, 683–690
 ^{14}C , 33–39, 41–49, 133–139, 231–244, 445–454, 485–490, 497–500, 517–529, 603–610, 633–642, 643–648, 785–795, 853–861, 863–868, 893–900, 925–932, 949–955, 957–964, 979–985, 987–995
 $^{14}C/^{12}C$ ratio, 387–394
 ^{14}C ages, 189–200, 437–443
 ^{14}C atmospheric release, 827–830
 ^{14}C background, 219–230
 ^{14}C calibration with AMS, 969–978
 ^{14}C chronology, 353–362, 809–826
 ^{14}C concentration, 911–916
 ^{14}C dating, 59–64, 123–131, 147–154, 245–258, 259–276, 277–284, 293–300, 301–314, 363–368, 377–385, 387–394, 551–566, 621–626, 691–699, 943–948, 745–754
 ^{14}C dates, 733–744
 ^{14}C degassing, 831–839
 ^{14}C distribution, 885–892
 ^{14}C inventory, 583–594
 ^{14}C liquid waste, 831–839
 $^{14}CO_2$, 901–910
 ^{14}C reservoir ages, 531–537
 ^{137}Cs , 893–900
 ^{14}C samples, 957–964
 ^{18}O , 517–529
 $^{230}Th/^{234}U$, 733–744
 $^{230}Th/U$ dating, 551–566
Accelerator mass spectrometry (AMS), 1–4, 5–16, 17–24, 33–39, 41–49, 51–58, 77–82, 89–95, 133–139, 141–145, 181–187, 363–368, 377–385, 387–394, 407–412, 445–454, 901–910
Accuracy, 17–24
Aegean, 325–344
Aerosol, 485–490
Aluminum, 89–95
AMS facility, 59–64
AMS high-precision, 165–173
Ancient documents, 369–375
Ancient nomads, 259–276, 277–284
Anomalous ^{14}C dates, 395–405
Anthropogenic ^{14}C , 869–875
Anthropogenic emissions, 475–484
Aquifer, 497–500
Archaeology, 219–230, 325–344
Asian monsoons, 925–932
Atmospheric $^{14}CO_2$, 501–515
Atmospheric circulation, 925–932
Australian megafauna, 437–443
Autocompaction, 421–435
Backgrounds, 41–49
Bayesian analysis, 979–985, 987–995
Beachrock, 539–550
Benzene synthesis, 105–116
Beryllium, 89–95
Beryllium fluoride, 83–88
BGO, 117–122
Bismarck Sea, 1005–1014
Black pottery, 407–412
Blank corrections, 123–131
Bomb ^{14}C , 595–601, 841–851, 893–900
Bomb peak, 455–463
Bone, 155–163, 853–861
Bone gelatin, 207–218
Bouncing, 77–82
Bulk combustion, 413–419
Bulk soil organic matter, 437–443
Calibration, 455–463, 785–795, 917–924, 987–995
CANDU reactor, 863–868
Carbonaceous aerosols, 475–484
Carbon AMS, 1–4
Carbon dioxide, 17–24, 25–32, 911–916
Carbon isotopes, 701–719
Carbon sequestration, 421–435
Cernavoda, 863–868
Charcoal, 841–851
Chemical oxidation, 413–419
Chalcolithic, 315–323
Chronology, 117–122, 315–323
China, 345–351
Chitin, 147–154
Chitosan, 147–154
Climate, 785–795, 987–995
Climate changes, 661–681, 809–826
Cocos (Keeling) Islands, 603–610
Coleoptera, 147–154
Collagen, 155–163
 CO_2 , 901–910
 CO_2 absorption, 105–116
 CO_2 ion source, 59–64
 CO_2 level, 701–719
Compact accelerator mass spectrometry, 83–88
Compound specific radiocarbon analysis (CSRA), 465–473
Contamination, 51–58
Coptic, 231–244
Coral, 595–601, 627–631, 643–648, 657–660
Coral Sea, 1005–1014
Core sediments, 797–808
Correlated noise, 979–985
Croatia, 245–258
Combustion system, 141–145
Cosmic background, 97–104
Cosmic ray intensity variations, 661–681
Cosmic rays, 683–690, 965–968
Cosmogenic isotopes, 661–681

- Curaçao, 765–774
 D-acetone, 141–145, 147–154
 Dating, 497–500
 Dead Sea, 649–655
 Dendrochronology, 917–924, 933–941
 Density fractionation, 853–861
 Early Iron Age, 353–362
 East Asia, 345–351
 Easter Island, 395–405
 Eastern Indian Ocean, 567–581
 Egypt, 231–244
 Elemental analyzer, 51–58
 Elemental carbon, 475–484
 El Niño, 627–631
 Environment, 765–774
 Environmental changes, 259–276, 277–284, 797–808, 809–826
 Environmental radiocarbon, 475–484
 Fiber pottery, 407–412
 Floating mats, 395–405
 Florida, 455–463
 Fluxes, 831–839
 Fossil fuel component, 911–916
 Fractionation, 5–16
 Galapagos, 627–631
 Gas, 25–32
 Gas handling system, 65–75
 Gas ion source, 65–75
 Gas samples, 65–75
 GC-AMS, 25–32
 Geochemical analysis, 259–276
 Geomagnetic excursion, 661–681
 GEOSECS, 583–594
 Germany, 175–180
 Glacial, 517–529
 Graphite, 133–139, 141–145
 Graphite sample preparation (organics and carbonates), 165–173
 Great Basin, Mono Lake, 189–200
 Groundwater, 501–515, 517–529
 Hammock River Marsh, 775–784
 Heliospheric modulation, 683–690
 High-elevation climatic effects, 969–978
 High resolution, 455–463
 Holocene, 301–314, 531–537, 539–550, 649–655, 691–699, 733–744, 797–808, 933–941
 Holocene deposits, 745–754
 Human bones, 377–385
 Human impacts, 721–731, 765–774
 HVEE, 77–82
 Hwajinpo Lagoon, 797–808
 Hybrid ion source, 65–75
 Indian Ocean, 603–610
 Indonesian Seas, 567–581
 Initial concentration, 497–500
 In situ, 201–206
 INTCAL98, 775–784, 943–948, 979–985
 Intermediate water, 583–594
 Interstellar clouds, 683–690
 Intertidal biota, 877–883
 Intertidal sediment, 877–883
 Ionization chamber, 83–88
 Ion source, 25–32, 33–39
 Irish coastline, 885–892
 Irish Sea, 869–875
 Iron, 175–180
 Iron Age, 611–620
 Iron Gates, 293–300
 Iron remains, 219–230
 Isobar suppression, 83–88
 Isotope fractionation, 539–550
 Japanese calligraphy, 369–375
 Japanese Islands, 345–351
 Japanese paper, 369–375
 Jordan, 315–323
 Kangaroo Island, 437–443
 Khant, 117–122
Kohitsugire fragment, 369–375
 Kurgan, 413–419
 Lake Baikal, 181–187, 745–754
 Lake Sediments, 621–626, 893–900
 Land-use change, 755–764
 Last Glacial, 649–655, 733–744
 Late Holocene, 721–731, 765–774
 Late Pleistocene, 745–754
 Leached ostracodes, 189–200
 Lepenski Vir, 293–300
 Liquid samples, 141–145
 Liquid scintillation spectrometry (LSC), 97–104, 105–116, 123–131
 Low-energy AMS, 1–4
 Maillard reaction, 147–154
 Magmatic carbon dioxide, 491–496
 Magnesium perchlorate, 165–173
 Mangroves, 421–435
 Marine diet, 285–291
 Marine radiocarbon reservoir effect, 611–620
 Marine reservoir correction, 603–610, 657–660
 Mesolithic, 809–826
 Mathematical modeling, 987–995
 Megafauna, 301–314, 363–368
 Mekong River, 657–660
 Multicathode, 949–955
 Nansei Islands, 539–550
 Neolithic, 245–258, 353–362, 377–385
 New Zealand, 207–218, 501–515, 721–731
 North Pacific, 133–139, 583–594
 North Sea, 869–875
 Northwestern Pacific, 643–648
 Nuclear processing plant, 827–830, 831–839
 Ocean, 987–995
 Ocean circulation, 603–610
 Ocean tracers, 567–581
 Online measurement, 65–75

- Open air AMS, 1–4
 Organic carbon, 475–484
 Oxygen, 5–16
 Pacific colonization, 207–218
 Pacific Ocean, 551–566
 Paleodiet, 293–300
 Paleohydrology, 649–655
 Paleowater, 517–529
 Palynology, 395–405, 721–731
 Peat, 455–463, 841–851
 Peru, 531–537
 Phospholipid fatty acids (PLFA), 465–473
 Poland, 809–826
 Pollen, 181–187, 485–490
 Pollen analysis, 259–276, 691–699
 Pollen dating, 721–731
 Pollen separations, 395–405
 Polynesian rat (*Rattus Exulans*), 207–218
 Porewater, 633–642
 Pottery manufacture, 345–351
 Prebomb period, 657–660
 Precision, 5–16, 17–24, 51–58
 Pretreatment, 17–24, 155–163, 207–218
 Quartz, 201–206
 Rare isotopes, 89–95
 Reservoir age, 621–626, 649–655, 785–795
 Reservoir correction (R value), 551–566
 River Thames, 285–291
 Roman, 231–244
 Russian Far East, 345–351
 Salt marshes, 775–784
 Sample preparation, 51–58, 219–230
 Santorini, 325–344
 Scotland, 611–620
 Spheroidal carbonaceous particles (SCP), 841–851
 Scythian time, 277–284
 Sea level, 421–435,
 Sea-level change, 539–550, 797–808
 Seasonality, 485–490, 643–648
 Seawater, 133–139, 583–594
 Seawater intrusion, 633–642
 Secular variation, 911–916
 Sedimentation rate, 421–435, 755–764
 Sellafield, 869–875, 877–883
 Sellafield discharges, 885–892
 Sequential, 77–82
 Shallow sediments, 633–642
 Siberia, 301–314
 Single stage AMS, 1–4
 Single-year tree rings, 949–955, 957–964
 Size distribution, 485–490
 Soil air, 491–496
 Soil erosion, 445–454
 Soil lipids, 465–473
 Soil organic matter, 413–419, 465–473
 Solar activity, 661–681, 965–968
 Solomon Sea, 1005–1014
 Sonoluminescence, 141–145
 Sopot culture, 245–258
 South China Sea, 595–601, 657–660
 South Georgia, Sub-Antarctic, 621–626
 Southwest Pacific, 1005–1014
 Spallation, 201–206
 Spectral analysis, 979–985
 Spectrometer, 41–49
 Spoerer Minimum, 965–968
 Stable isotopes, 285–291, 293–300, 853–861
 Statistical inference, 987–995
 Stepped-combustion, 893–900
 Stone-pine dendrochronology, 969–978
 Subfossil wood, 123–131
 SUERC, 59–64
 Sunspots, 987–995
 Super low level, 117–122
 Surface and underground laboratories, 97–104
 Surface corals, 551–566
 Tandetron, 77–82
 Teleilat Ghassul, 315–323
 Textiles, 231–244
 Thailand, 925–932
 Thera, 325–344
 Throughflow, 567–581
 Transport, 89–95
 Tree-ring chronology, 943–948
 Tree rings, 701–719, 755–764, 911–916, 917–924, 925–932, 933–941, 965–968, 987–995
 Tricarb, 117–122
 Tritium, 567–581
 Turnover, 853–861
 TURTLE, 89–95
 Ultra-filter, 155–163
 Unzen Volcano, 491–496
 Upper Paleolithic, 353–362
 Upwelling, 531–537, 627–631
 Urban development, 315–323
 U.S. Midwest, 933–941
 Vegetational history, 691–699
 Volcano, 325–344
 Wetland, 755–764
 Wiggle-match, 277–284, 387–394, 917–924, 957–964, 943–948
 World Ocean Circulation Experiment (WOCE), 583–594
 Younger Dryas, 933–941
