

# CLAY MINERALS

VOLUME 34, NUMBER 1, MARCH 1999

## CONTENTS

|                                                                                                                                                                                                                                |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <i>Editorial</i>                                                                                                                                                                                                               | 1   |
| D. M. C. MacEwan. The origin of the Clay Minerals Group                                                                                                                                                                        | 3   |
| M. J. Wilson. The origin and formation of clay minerals in soils: past, present and future perspectives                                                                                                                        | 7   |
| J. Środoń. Use of clay minerals in reconstructing geological processes: recent advances and some perspectives                                                                                                                  | 27  |
| H. H. Murray. Applied clay mineralogy today and tomorrow                                                                                                                                                                       | 39  |
| G. C. Allen, J. R. Eastman, K. R. Hallam, G. J. Graveling, K. V. Ragnarsdottir and D. R. Skuse. Mineral/reagent interactions: an X-ray photoelectron spectroscopic study of adsorption of reagents onto mixtures of minerals   | 51  |
| J. A. Anderson and M. Galán-Fereres. Precursor-support interactions in the preparation of sepiolite-supported Ni and Pd catalysts                                                                                              | 57  |
| K. Bahranowski, E. Bielańska, R. Janik, T. Machej and E. M. Serwicka. LDH-derived catalysts for complete oxidation of volatile organic compounds                                                                               | 67  |
| K. Bahranowski, M. Gąsior, A. Kielski, J. Podobiński, E. M. Serwicka, L. A. Vartikian and K. Wodnicka. Copper-doped alumina-pillared montmorillonites as catalysts for oxidation of toluene and xylenes with hydrogen peroxide | 79  |
| N. J. Elton, L. F. Gate and J. J. Hooper. Texture and orientation of kaolin in coatings                                                                                                                                        | 89  |
| E. Galán, M. I. Carretero and J. C. Fernández-Caliani. Effects of acid mine drainage on clay minerals suspended in the Tinto River (Río Tinto, Spain). An experimental approach                                                | 99  |
| C. Galhano, F. Rocha and C. Gomes. Geostatistical analysis of the influence of textural, mineralogical and geochemical parameters on the geotechnical behaviour of the 'Argilas de Aveiro' Formation (Portugal)                | 109 |
| D. T. Griffen. Quantitative phase analysis of clay minerals by X-ray powder diffraction using artificial neural networks. I. Feasibility study with calculated powder patterns                                                 | 117 |
| S. Hillier. Use of an air brush to spray dry samples for X-ray powder diffraction                                                                                                                                              | 127 |
| A. Hurst. Textural and geochemical micro-analysis in the interpretation of clay mineral characteristics: lessons from sandstone hydrocarbon reservoirs                                                                         | 137 |
| K. Kirsimäe, P. Jørgensen and V. Kalm. Low-temperature diagenetic illite-smectite in Lower Cambrian clays in North Estonia                                                                                                     | 151 |
| P. J. Loveland, I. G. Wood and A. H. Weir. Clay mineralogy at Rothamsted: 1934–1988                                                                                                                                            | 165 |
| P. H. Nadeau. Fundamental particles: an informal history                                                                                                                                                                       | 185 |
| A. Psyrillos, J. H. Howe, D. A. C. Manning and S. D. Burley. Geological controls on kaolin particle shape and consequences for mineral processing                                                                              | 193 |
| <i>Book Reviews</i>                                                                                                                                                                                                            | 209 |
