

## SUBJECT INDEX

- acoustic flux 322, 323, 329, 340, 343
- acoustic wave 376
- angular diameters 103, 461
  
- Balmer progression 5, 14
- binaries
  - common-envelope systems 387, 401, 415
  - contact systems 265, 387
  - critical surface 281
  - frequency 261
  - mass exchange 386, 484
  - mass loss 11, 31, 253, 271, 281, 385, 401, 409
  - mass ratio 261, 265, 271
  - multiple system 277
  - orbital angular momentum 409, 484
  - radial velocity 31, 277, 287, 291
  - stellar wind 391, 409
  - Wolf-Rayet stars 281, 287, 291, 409, 421, 433, 484
  
- central stars 43, 99
- centrifugal force 368
- convection 314, 321, 331, 364, 365, 381
- convective envelope 359
- core He-burning 343, 371
- corona-cool wind model 201, 257
  
- differential rotation 368, 369
  
- effective temperatures 103, 113, 437, 461, 484
- energy distributions 39
- equal mass curves (EMC) 325, 326
- evolution
  - binaries 409, 484
  - common-envelope binaries 401
  - timescales 301
  
- fast moving knots 358, 380
  
- hydrogen deficiency 305, 433
  
- imperfect flow wind model 215
- infrared observations 122, 131, 139, 143
- ionization balance 182
- isochrones 318, 342
  
- line profiles
  - equivalent widths 107
  - H alpha 23, 35, 39, 249
  - hydrogen, helium 243
  - ultraviolet 65, 81, 93, 95, 99

- luminosity classes 301, 433
- mass loss
  - binaries 11, 31, 253, 281, 334, 385, 401, 409
  - central stars 43
  - indicators 4
  - infrared 122, 139, 143
  - radiatively driven 237
  - radio 119, 147, 151, 155, 253
  - rates 315, 325, 329, 337, 342, 345, 352, 361, 380
  - single stars 35, 47, 237
  - supergiants 329, 337, 339
  - variation 35
  - Wolf-Rayet stars 433
- masses 15, 265, 271, 433
- meridional mixing 314
- metallicity 379
  
- OBn star 316
- overluminosity 313, 314
  
- photometry 10, 421
- polarimetry 9
- progenitor stars 357, 358, 362
  
- quasi-stationary flocculi 358, 359
  
- radial velocities 55, 287, 291
- radio observations 119, 147, 155
- radiatively-driven winds 175
- radio stars 151
- rotation 331, 367, 368
- runaway stars 18, 291, 421, 447
  
- semi-convection 321, 339, 341, 351, 365, 372, 381
- spectra
  - infrared 131
  - infrared review 122
  - optical review 3
  - radio review 119
  - ultraviolet 461
  - ultraviolet review 65
- spectrophotometry 461
- stellar radii 103
- stellar winds
  - binaries 31, 391, 409, 484
  - from ultraviolet 65
  - physical conditions 68, 253
  - velocities 68

- stellar wind theories/models
  - corona-cool wind 201, 257
  - coronal wind 241
  - imperfect flow 215
  - radiatively-driven winds 175, 237
  - review 169
  - summary 491
  - warm wind 191, 257
- subluminous stars 99, 291
- supernova remnant 357, 358
  
- turbulence 376
- turbulent magnetic fields 377
- turbulent velocities 377
  
- variability
  - H alpha 23, 35
  - infrared and radio 125
  - line profiles 17, 73
  - line strengths 27
- velocity gradients 475
- velocity progression 475
  
- warm wind 191, 257
- Wolf-Rayet stars
  - binaries 281, 287, 291, 409
  - chemical abundances 433, 461
  - effective temperatures 433, 471
  - evolutionary status 437, 455, 461
  - galactic distribution 452
  - infrared 124
  - late type WN stars 447, 479
  - Magellanic Clouds 51, 433
  - magnitudes 433, 471
  - masses 433
  - radio 119
  - runaways 447
  - WN 7,8 stars 327, 340, 345, 356
  
- X-ray binaries 313, 327, 328, 334, 354
