

Subscription rates

Subscription rates for volume **48** (2011) of *Journal of Applied Probability (JAP)* are as follows (post free and including online access at <http://projecteuclid.org/jap/>): US\$312.00; A\$360.00; £195.00 for libraries and institutions; or US\$104.00; A\$120.00; £65.00 for individuals belonging to a recognised scientific society. The subscription rates for volume **43** (2011) of *Advances in Applied Probability*, the companion publication, are the same; if both journals are ordered directly from the Applied Probability office at the same time, the combined price is discounted by 10%. Please send all enquiries to: Applied Probability Subscriptions, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK (telephone +44 114 222 3922; fax +44 114 272 9782; email s.c.boyles@sheffield.ac.uk). Cheques, money orders, etc. should be made payable to 'Applied Probability'. Payment is acceptable in US, Australian or UK currency, or by Visa or Mastercard. We can provide back issue prices on application.

Notes for contributors

Research papers are published in both *Journal of Applied Probability (JAP)* and *Advances in Applied Probability (AAP)*, with longer papers typically appearing in *AAP*. However, assignment of papers between the two journals is made by the Editor on an issue-by-issue basis. A submission to Applied Probability is considered as a submission to either journal. In addition, *AAP* publishes letters specifically related to papers that have appeared in *AAP* and *JAP* publishes short communications of a few printed pages in the nature of notes and letters specifically related to papers that have appeared in *JAP*. Review papers and papers in *stochastic geometry and statistical applications* are published in *AAP*.

Fifty offprints of each paper will be provided free, with additional offprints available at cost.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2000 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as hard copy or as electronic files (with hard copy back-up). All submissions will be acknowledged on receipt and **must be accompanied by a covering letter stating the author's postal address and affiliation**. Hard copy: Send **all** submissions to the Applied Probability office in Sheffield, and not to individual editors. Two copies of the paper, at least one of which should be double spaced, should be sent to: **Executive Editor, Applied Probability, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK**. Electronic submission: Please email a **double-spaced** PostScript™ (.ps) or portable document format (.pdf) file, not exceeding 1 Mb. **The files must be clearly identified by name in a separate covering message**. The address for email submissions is l.nash@sheffield.ac.uk. Authors should also submit one hard copy to the Executive Editor, as above.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021-9002/11

Volume 48 Number 1

Research Papers

- 1 ANGELOS DASSIOS AND SHANLE WU. Double-barrier Parisian options
- 21 KATSUMASA NISHIDE AND L. C. G. ROGERS. Optimal time to exchange two baskets
- 31 NADER EBRAHIMI. Assessing the reliability function of nanocomponents
- 43 NEERAJ MISRA, AMIT KUMAR MISRA AND ISHWARI DUTT DHARIYAL. Standby redundancy allocations in series and parallel systems
- 56 F. G. BADIA. Hazard rate properties of a general counting process stopped at an independent random time
- 68 N. S. WALTON. Utility optimization in congested queueing networks
- 90 KONSTANTIN AVRACHENKOV, ALEXEY PIUNOVSKIY AND YI ZHANG. Asymptotic fluid optimality and efficiency of the tracking policy for bandwidth-sharing networks
- 114 PETER W. GLYNN AND MICHEL MANDJES. Simulation-based computation of the workload correlation function in a Lévy-driven queue
- 131 RUDOLF GRÜBEL AND HENDRIK WEGENER. Matchmaking and testing for exponentiality in the $M/G/\infty$ queue
- 145 CHIHOON LEE. On the return time for a reflected fractional Brownian motion process on the positive orthant
- 154 CHANG-LONG YAO, GE CHEN AND TIAN-DE GUO. Large deviations for the graph distance in supercritical continuum percolation
- 173 SIMON E. F. SPENCER AND PHILIP D. O'NEILL. The probability of containment for multitype branching process models for emerging epidemics
- 189 R. T. SMYTHE. Generalized coupon collection: the superlinear case
- 200 E. J. BAURDOUX AND K. VAN SCHAİK. Further calculations for the McKean stochastic game for a spectrally negative Lévy process: from a point to an interval
- 217 MARK S. VEILLETTE AND MURAD S. TAQQU. A technique for computing the PDFs and CDFs of nonnegative infinitely divisible random variables
- 238 KEN R. DUFFY, CLAUDIO MACCI AND GIOVANNI LUCA TORRISI. Sample path large deviations for order statistics
- 258 JI HWAN CHA AND MAXIM FINKELSTEIN. On new classes of extreme shock models and some generalizations
- 271 SUBHASH KOCHAR AND MAOCHAO XU. On the skewness of order statistics in multiple-outlier models

Short Communications

- 285 PATRICK FAYARD AND TIMOTHY R. FIELD. Discrete models for scattering populations
- 293 RHONDA RIGHTER. Stochastic comparison of discounted rewards
