HOW TO DO IT

SECOND EDITION

The first edition of HOW TO DO IT proved a useful and popular guide to those things a doctor needs to know but is rarely taught: how to take an examination, how to interview and be interviewed, how to plan and write up research, how to behave at an inquest. In the second edition the original chapters have been expanded and updated, and there are several more chapters on new challenges – choosing a computer, flying, holding a press conference – and on some older ones not included in the first edition – assessing a job, dealing with a publisher.

Journal of the History of Biology

Editor

Everett Mendelsohn, *Harvard University, Cambridge, USA*

The *Journal of the History of Biology* is devoted to the history of the biological sciences, with additional interest and concern in philosophical and social issues confronting biology. While all historical epochs are welcome, particular attention has been paid in recent years to developments during the nineteenth and twentieth centuries. The journal serves the working biologist who needs a full understanding of the historical and philosophical bases of the field as well as serving the historian of science interested in following developments in the biological sciences.

The BMJ's new series of books of general interest by medical writers

This enterprising new series could have no better beginning. ROY PORTER

The MEMOIR Club

In *Doctors in Science and Society* Christopher Booth examines the lives and times of some eighteenth century medical scientists, among them Sir Samuel Garth, FRS, physician to the Duke of Marlborough and friend and fellow poet of Alexander Pope; and Dr John Dawson, a country practitioner and largely self taught mathematical genius, twelve of whose pupils went on to become senior wranglers at the University of Cambridge.

Not concerned only with history, *Doctors in Science and Society* also considers the role of modern medical science and its relationship with technology, and the development and function of two major medical institutions, the Medical Research Council and the Royal Postgraduate Medical School. Written with elegance and authority, this fascinating collection is a must for anyone interested in the past and future of medical science.

"... a delight to read and a pleasure to handle... At the price of a meal out it is superb value. 'Buy good books', wrote Lord Chesterfield to his son, 'and read them'. I can give no better advice about this book."

The Lancet: October 10 1987

"... a well written and well researched series of contributions that will give pleasure and instruction to what should be a wide readership."

Journal of the Royal College of Physicians: January 1988

The latest Keynes Press publication marks the ninetieth anniversary of a major breakthrough in tropical medicine

This day designing God
 Hath put into my hand
 A wondrous thing. And God
 Be praised. At His command,

I have found thy secret deeds
 Oh million-murdering Death.

I know that this little thing
 A million men will save—
 Oh death where is thy sting?
 Thy victory oh grave?

Not many scientists are moved to verse by the fruits of their research, but few results are as momentous as the one celebrated by Ronald Ross in *The Great Malaria Problem and its Solution*. Adapted from Ross's memoirs, this Keynes Press edition gives the full story of Ross's discovery of the mode of transmission of malaria by the *Anopheles* mosquito. Engagingly written, it is the frank and accurate picture of four years' painstaking work, full of hope, despair, elation, frustration, and what Ross describes as the "sacred passion for discovery." It also shows the close and moving scientific partnership between Ross and Patrick Manson, the "father of tropical medicine", as evidenced in the 155 letters exchanged between them over this period.

Fully illustrated, and with an introduction by L J Bruce-Chwatt, emeritus professor of tropical public health at the University of London, this unique volume provides a fascinating insight into the process of scientific research as well as a self portrait of one of the most impressive and colourful individuals in the history of tropical medicine.
