

## Instructions for contributors

*Robotica* aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. This includes: novel robotic mechanism and actuator design; robot kinematics, dynamics and control; computer vision; sensor fusion; teleoperation and haptic interfaces; robot motion planning; and artificial intelligence. In addition, papers that apply techniques from Robotics to other fields are also welcome. Examples include dynamics and control models applied to biological systems, the description of implementations of robots in factories, service and agricultural settings, and general mechatronic design. Works may be theoretical, computational or experimental, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editor.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Robotica* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor's decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

## Submission of manuscripts

Manuscripts for consideration by *Robotica* should be submitted electronically, using the Manuscript Central System, via <http://mc.manuscriptcentral.com/cup/robotica>. This system will allow authors to benefit from faster review and earlier, online publication. The system will accept PDF files; most other file types will be automatically converted directly into PDF. Source files are required for any paper accepted for publication. Authors who are unable to submit online should contact the Editorial Office ([robotica@cambridge.org](mailto:robotica@cambridge.org)) for assistance.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

## Layout of manuscripts

Text should be double spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. The title and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance of a manuscript, authors are asked to send the electronic source file of the final version together with a PDF copy produced using the same file. The publisher reserves the right to typeset material by conventional means if an author's file proves unsatisfactory.

## Illustrations

Figures should be composed to occupy a single column (80mm) or two columns (166mm) after reduction. The preferred format for figure files is .eps or .tiff at resolution 1200 dpi for lines, 600 dpi for greyscale and 300 dpi for colour (which preferably should also be in CMYK – cyan magenta yellow black – format). However,

most standard image formats such as pct, ppm, png, psd, Word, ppt, CorelDraw, ChemDraw, AutoCAD can also be used, but not customized output of software not designed for publishing purposes such as Matlab, nor PDF. Figures to be printed in black and white must be submitted as black and white files.

Figures should be numbered consecutively, with Arabic numerals, have descriptive captions, and be mentioned in the text. A list of captions should be attached separately, and as far as possible, information relating to a figure should be placed in the caption rather than on the figure. Each figure should be clearly numbered. Photographs should be the same size as they will appear in the journal and should be selected to fit neatly into one column (80 mm) or two columns (166 mm). Photographs should be clearly identified and numbered as for line drawings.

## Tables

Tables should be presented on separate sheets. A descriptive title should be given to each table. If possible, very wide tables should be avoided. Tables should be numbered consecutively in Roman numerals. Exceptionally lengthy tables may be summarized for publication with a note that fuller details can be obtained from the authors.

## Equations

Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be set in Roman (upright) type should be marked clearly.

## References

In the text, references are indicated by superior Arabic numbers (without brackets), and should be confined to published work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names: cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics:

P.W. Anderson, "More is different" *Science* **177**, 393-399 (1972);  
C.V. Negoita, *Fuzzy Systems* (Abacus Press. Tunbridge Wells, UK, 1980).

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

## Proof Reading

The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page charge is made.

## Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

# ROBOTICA

Volume **42** Part **6** June **2024**

Special Issue on Applications of Reconfigurable Mechanisms and Robotics <b>Guowu Wei, Daniel Martins and Fengfeng (Jeff) Xi</b>	1709
Editorial to the special issue on "Modeling and control of innovative robots" <b>Andreas Müller, Mathias Brandstötter, Lotfi Romdhane and Alessandro Gasparetto</b>	1710
Editorial of the special issue: innovative robot design for special applications <b>Alessandro Gasparetto, Yukio Takeda and Giulio Rosati</b>	1712
Learning vision-based robotic manipulation tasks sequentially in offline reinforcement learning settings <b>Sudhir Pratap Yadav, Rajendra Nagar and Suril V. Shah</b>	1715
Compliant variable admittance adaptive fixed-time sliding mode control for trajectory tracking of robotic manipulators <b>Hang Gao, Chao Ma, Xiaodong Zhang and Cheng Zhou</b>	1731
Multi-objective optimal trajectory planning for robot manipulator attention to end-effector path limitation <b>Jintao Ye, Lina Hao and Hongtai Cheng</b>	1761
Frequency-dependent $H_{\infty}$ control for wind disturbance rejection of a fully actuated UAV <b>Jérémie X. J. Bannwarth, Shahab Kazemi and Karl Stol</b>	1781
Research on welding seam tracking algorithm for automatic welding process of X-shaped tip of concrete piles using laser distance sensor <b>Cao Tri Huynh and Tri Cong Phung</b>	1796
Real-time adaptive super twisting algorithm based on PSO algorithm: application for an exoskeleton robot <b>Hichame Tiaiba, Mohamed El Hossine Daachi and Tarek Madani</b>	1816
Radial basis function neural networks for formation control of unmanned aerial vehicles <b>Duy-Nam Bui and Manh Duong Phung</b>	1842
Design and singularity analysis of a parallel mechanism with origami-inspired reconfigurable 5R closed-loop linkages <b>Yili Kuang, Haibo Qu, Xiao Li, Xiaolei Wang and Sheng Guo</b>	1861
A multi-stage localization framework for accurate and precise docking of autonomous mobile robots (AMRs) <b>Abdurrahman Yilmaz and Hakan Temeltas</b>	1885
Autonomous navigation and steering control based on wireless non-wheeled snake robot <b>Liming Bao, Yongjun Sun and Zongwu Xie</b>	1909
Modeling, simulations and experiments with generally routed cable-driven continuum robots and their application to three-fingered grippers <b>Soumya Kanti Mahapatra and Ashitava Ghosal</b>	1919
A virtual reality-based dual-mode robot teleoperation architecture <b>Marco Gallipoli, Sara Buonocore, Mario Selvaggio, Giuseppe Andrea Fontanelli, Stanislao Grazioso and Giuseppe Di Gironimo</b>	1935
Biofusion design and parameter optimization for a novel passive assisted knee exoskeleton robot based on eight-bar mechanism <b>Jun Wei, Shizhao Zhang and Jianjun Zhang</b>	1959
Vision-based adaptive LT sliding mode admittance control for collaborative robots with actuator saturation <b>Cong Huang, Minglei Zhu, Shijie Song, Yuyang Zhao and Jinmao Jiang</b>	1986
Co-designing versatile quadruped robots for dynamic and energy-efficient motions <b>Gabriele Fadini, Shivesh Kumar, Rohit Kumar, Thomas Flayols, Andrea Del Prete, Justin Carpentier and Philippe Souères</b>	2004
Multi-objective trajectory planning for industrial robots using a hybrid optimization approach <b>Taha Chettibi</b>	2026
Four-bar linkage reconfigurable robotic wheel: Design, kinematic analysis, and experimental validation for adaptive size modification <b>X. Yamile Sandoval-Castro, Sergio Muñoz-Gonzalez, Mario A. Garcia-Murillo, Pedro D. Ferrusca-Monroy and Maxiamiano F. Ruiz-Torres</b>	2046
A variable stiffness design method for soft robotic fingers based on grasping force compensation and linearization <b>Xiaowei Shan, Litao Xu and Xuefei Li</b>	2061

Robotica now accepts submissions via Manuscript Central
