## VOLUME 112 SUPPLEMENT 1996

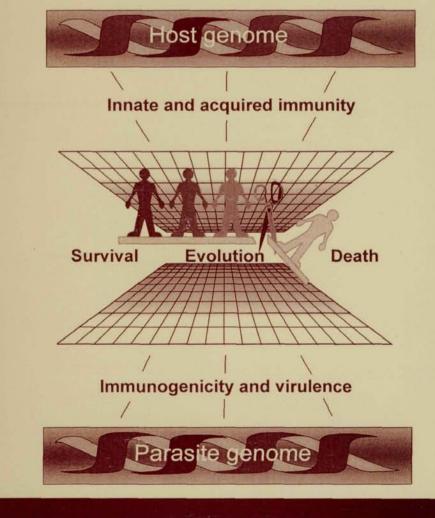

Symposia of the British Society for Parasitology Volume 33

Genetics of host and parasite: implications for immunity, epidemiology and evolution

EDITED BY D. WAKELIN and D. WALLIKER

CO-ORDINATING EDITOR L. H. CHAPPELL

CAMBRIDGE UNIVERSITY PRESS

**Subscriptions** may be sent to any bookseller or subscription agent or direct to the publisher: Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU. Subscriptions in the USA, Canada and Mexico should be sent to Cambridge University Press, Journals Department, 40 West 20th Street, New York, NY 10011–4211. All orders must be accompanied by payment. The subscription price (excluding VAT) of volumes 112 and 113, 1996 is £292 (US \$540 in the USA, Canada and Mexico), payable in advance, for twelve parts plus supplements; separate parts cost £26 or US \$48 each (plus postage). EU subscribers (outside the UK) who are not registered for VAT should add VAT at their country's rate. VAT registered subscribers should provide their VAT registration number. Japanese prices for institutions (including ASP delivery) are available from Kinokuniya Company Ltd, P.O. Box 55, Chitose, Tokyo 156, Japan. Second class postage paid at New York, NY and at additional mailing offices. POSTMASTER : send address changes in USA, Canada and Mexico to *Parasitology*, Cambridge University Press, 110 Midland Avenue, Port Chester, New York, NY 10573–4930.

Preface	<b>S1</b>
List of contributions	S5

Genetic variability in parasites and host-	
parasite interactions	S7
Summary	S7
Introduction	S7
The parasites	S7
Genetic variability, host occurrence and the	
species problem	S7
Echinococcus	<b>S8</b>
Giardia	S9
Cryptosporidium	S10
Species concepts	S10
The molecular ecology of host-parasite	
interactions	S11
Giardia	S11
Echinococcus	S13
Cryptosporidium	S13
Limitations and new approaches	S14
Genetic variation with the host	S15
Intra-host competition	S16
Virulence	S17
Conclusions	S19
References	S19
References	517
Host genetics and infectious disease	S23
Summary	S23
Introduction	S23
Genetic factors in susceptibility to malaria:	
the haemoglobinopathies	S23
Other red cell polymorphisms related to	020
present or past malaria	S26
Malaria-related polymorphisms in other	520
systems	S26
Selection by infection and other common	520
monogenic or polygenic diseases	S27
· · · · ·	327
Broader issues of genetic diversity to the	S27
selective pressures of infection	527 S28
References	528
T cell and cytokine basis of host	
variability in response to intestinal	
nematode infections	S31
Summary	S31
Variation in infection	S31
Expulsion of nematodes from the intestine is	551
mediated by T cells	S32
Immunity and predisposition to infection	S32
Factors controlling differential immune	052
responsiveness	S33
Influence of the parasite	535 S35
minuence of the parasite	222

	S35
References	S36
The role of MHC- and	
non-MHC-associated genes in	
determining the human immune	
response to malaria antigens	S39
Summary	S39
Introduction	S39
Host immune response genes and	
susceptibility to mild or severe malaria	S40
Evidence for genetic control of the immune	
response to malaria antigens	S41
Murine studies	S41
Human studies: MHC genes	S41
Human studies: non-MHC genes	S43
Non-genetic regulation of antibody response	
to malaria antigens	S44
Clonal imprinting or "original antigenic sin"	
as an explanation for selective antibody	
recognition of malaria antigens	S46
Implications for vaccine development	S46
So, what does determine which	
antigens/epitopes are targeted by the	~
immune system?	S47
Acknowledgements	S48
References	S48
Influence of host and parasite genotypes	
on immunological control of	
Theileria parasites	S53
Summary	S53
Sammary
