# Erratum

‘Psychomotor development and minor anomalies in children exposed to antiepileptic drugs in utero: a prospective population-based study’  
*DMCN* **42**: 87–92

Wide et al. have indicated that Table Va (p 90) in their article is incorrect because the odds ratios and confidence intervals are based on those for a matched case-control study, whereas the data for the subjects and control infants are for an unmatched case-control study. The correct Table Va is given below.

**Table Va: Number of pairs of infants with minor anomalies exposed to antiepileptic drugs during pregnancy**

	<i>Anomaly in subjects and control infants</i>	<i>Anomaly in subjects not control infants</i>	<i>Anomaly in control infants not subjects</i>	<i>No anomaly in subjects or control infants</i>	<i>OR (95% CI)</i>
Carbamazepine	4	11	1	22	11.0 (1.4, 85.2)
Phenytoin	1	4	5	12	0.8 (0.2, 3.0)
Others	0	3	1	6	3.0 (0.3, 28.8)
Polytherapy	2	6	3	5	2.0 (0.5, 8.0)
Total	7	24	10	45	2.4 (1.2, 5.0)

Complete protocols on minor anomalies were obtained from 83 complete pairs out of the 87 matched subject/control infant pairs born to mothers participating once or for the first time in the study. Odds ratio (OR) and the 95% confidence intervals (CI) were calculated as conditional logistic regression analyses.
