“An accessible and gripping narrative on a serious topic that manages to explain, in plain English, how viruses are changing the world.”—NATHAN WOLFE, founder and CEO of Global Viral Forecasting

A Planet of Viruses

CARL ZIMMER

“*A Planet of Viruses* is an important primer on the viruses living within and around all of us—sometimes funny, other times shocking, and always accessible. Whether discussing the common cold and flu, little-known viruses that attack bacteria or protect oceans, or the world’s viral future as seen through our encounters with HIV or SARS, Zimmer’s writing is lively, knowledgeable, and graced with poetic touches.”

FORTHCOMING IN MAY

“Disease Maps is an extraordinary visual and narrative treat. I have come to look forward to Tom Koch’s books for the wonderful and unique way that he can synthesize data and present it visually and in the process tell us magnificent stories.”

**Dr. Abraham Verghese,
Stanford University School of Medicine**

“This is a masterful book in conception and structure. It is also extremely well written. What we find on reading is an exquisite telling of the history of the medical science of disease. The collection of medical maps, diagrams, and other illustrations is impressive in scope—there are many disease maps shown that have not been publicly available before or collected in one place.”

Address infection prevention and quality of patient care with this hands-on guide to epidemiologic principles and prevention strategies.

In recent years, issues of infection prevention and control, patient safety, and quality-of-care have become increasingly prominent in healthcare facilities. *Practical Healthcare Epidemiology* takes a practical, hands-on approach to these issues, addressing all aspects of infection surveillance and prevention in clear, straightforward terms. This fully revised third edition brings together the expertise of more than fifty leaders in healthcare epidemiology who provide clear, sound guidance on infection prevention and control for the full range of patients in all types of healthcare facilities, including those in settings with limited resources. A powerful resource for practitioners in any branch of medicine or public health who are involved in infection prevention and control, whether they are experienced in healthcare epidemiology or new to the field.
