

PROCEEDINGS
OF
THE ROYAL SOCIETY
OF
EDINBURGH.

VOL. I.

DECEMBER 1832 TO MAY 1844.

EDINBURGH :
PRINTED BY NEILL AND COMPANY.

MDCCCXLV.

CONTENTS.

On the Colours of Natural Bodies. By Sir David Brewster, V.P., R.S.E.,	Page 3
Notice respecting the Determination of the Geographical positions of the Village of Chamouni, and of the Convent of the Grand St. Bernard. By James D. Forbes, Esq., F.R.SS. L. & E.,	4
Researches on the conducting power of the Metals for Heat and Electricity, tending to establish a New Analogy between these principles. By James D. Forbes, Esq., F.R.SS. L. & E.,	5
On the Super-Sulphuretted Lead of Dufton. By J. F. W. Johnston, Esq., A.M., F.R.S.E.,	7
On the Natural History of the Salmon. By Robert Knox, M.D., F.R.S.E.,	7
Account of some Optical Phenomena observed upon the Rigi, on the 16th October 1832. By James D. Forbes, Esq., F.R.SS. L. & E.,	10
Notice respecting the application of Heated Air to Blast Furnaces. By Robert Bald, Esq.,	11
An Attempt to illustrate the remaining monuments of the Ancient Etruscan Language. By the Rev. John Williams, A.M., F.R.S.E.,	12
On the Gradual Elevation of Land in High Northern Latitudes. By J. F. W. Johnston, Esq., A.M., F.R.S.E.,	12
Observations on the Anatomy of the Rorqual (a whalebone Whale of the largest magnitude), drawn up from the dissection of a specimen found dead off North Berwick. By Robert Knox, M.D., F.R.S.E.,	14
Observations on the Structure of the Foot of the Horse. By Robert Knox, M.D., F.R.S.E.,	15
Experimental Researches regarding certain vibrations which take place between Metallic masses having different Temperatures. By James D. Forbes, Esq., F.R.SS.L. & E.,	17
On the Equations of Loci traced upon the surface of the sphere, as expressed by spherical co-ordinates. By T. S. Davies, Esq., F.R.S.E.,	19
Experiments and Observations on the Arterialization of the Blood. By William Gregory, M.D., F.R.S.E., and W. J. Irvine, Esq.,	20
Observations on the Lines of the Solar Spectrum, and on those produced by the Earth's Atmosphere, and by the action of Nitrous Acid Gas. By Sir David Brewster, LL.D., F.R.S.,	21
Notice relative to the Pigmentum Nigrum of the Eye. By Thomas Wharton Jones, Esq.,	24
VOL. I.	b

Dr Knox on the structure of the Ribs,	26
On the Composition of some Iron Slags. By J. F. W. Johnston, Esq., F.R.S.E.,	26
On a New Species of Coloured Fringes developed between certain pieces of Plate Glass, exhibiting a new variety of Polarization, and a peculiar property which renders them available for the purpose of Micrometry. By Mungo Ponton, Esq.,	31
Communication relative to the Fresh Water Limestone of Burdiehouse, near Edinburgh, belonging to the Carboniferous Group of Rocks. By Dr Hibbert, F.R.S.E.,	33
A General View of the Phenomena displayed in the neighbourhood of Edinburgh, by the Igneous Rocks, in their relations with the Secondary Strata; with reference to a more particular description of the section which has been lately exposed to view on the south side of the Castlehill. By the Right Honourable Lord Greenock,	35
Researches on the Vibrations of Pendulums in Fluid Mediums. By George Green, Esq. Communicated by Sir G. French Bromhead, Bart.,	36
Observations on the Fossil Fishes lately found in Orkney. By Thomas Stewart Traill, M.D., F.R.S.E.,	37
Notice of further discoveries at Burdiehouse. By Dr Hibbert,	38
On the Investigation of Magnetic Intensity, by the Oscillations of a Horizontal Needle. By William Snow Harris, Esq., F.R.S.,	39
Experiments on Magnetic Intensity made at Liverpool and Manchester. By Thomas Stewart Traill, M.D., F.R.S.E.,	40
Description and Analysis of a Mineral from Faroe, not before examined. By Arthur Connell, Esq.,	41
Short Notice relative to the position of the Limestone at Burdiehouse, and the relation it bears to the Mountain Limestone of Muirhouse. By Dr Hibbert,	42
On the Principle of Vital Attraction and Repulsion, with some applications to Physiology and Pathology. By W. P. Alison, M.D., F.R.S.E.,	44
Notice of some recent discoveries in Organic Chemistry. By William Gregory, M.D., F.R.S.E.,	47
On the Structure, Position, and other particulars of a Fossil Tree, found in Craighleith Quarry in the month of October last. By H. T. Maire Witham, Esq.,	47
Analysis of Coprolites from the Limestone of Burdiehouse. By Arthur Connell, Esq.,	48
Notice relative to the Polyzoal Lenses belonging to the Commissioners of the Northern Lighthouses. By Alan Stevenson, Esq.,	49
Additional Notice relative to the Freshwater Limestone in the vicinity of Edinburgh, belonging to the Carboniferous Group of Rocks. By Dr Hibbert,	50
On the Force of the Latin Prefix <i>ve</i> or <i>vae</i> . By the Rev. John Williams,	54
On a new Register Anemoscope. By Dr Traill,	54

Dr D. B. Reid exhibited some experiments on the heating power of the radiant caloric, from the lime-ball light of Mr Drummond; and illustrated, by means of the same light, the transparency of flame,	55
Notice of Experiments on the Diminution of Intensity sustained by the Sun's rays in passing through the Atmosphere. By Professor Forbes,	55
On the Application of the Microscope to the examination of the minute phenomena of Chemical Action. By the Rev. Edward Craig. Communicated by Dr D. B. Reid,	57
On a Register Barometer for indicating Maxima and Minima. By Dr Traill,	57
Remarks on the remains of an Oak dug from a Peat-moss near Lanfyne, Ayrshire. By Thomas Brown, Esq.,	59
Analysis of Levyine. By Arthur Connell, Esq.,	60
Summary of the discoveries hitherto made in the Ossiferous Beds of the Basins of the Forth and Clyde. By Dr Hibbert,	61
Account of the dissection of a young Rorqual, or short whalebone Whale (the <i>Balæna Rostrata</i> of Fabricius), with a few observations on the Anatomy of the Fœtal Mysticetus. By Robert Knox, M.D.,	63
On Phosphuretted-Hydrogen Gas. By Thomas Graham, Esq., Glasgow,	70
On the Fossil Fishes of the Limestone of Burdiehouse. By Dr Hibbert,	72
General Remarks on the Coal Formation of the Great Valley of the Scottish Lowlands. By Major-General Lord Greenock,	74
On the Composition of the Rangoon Petroleum, with remarks on the Composition of Petroleum and Naphtha in general. By William Gregory, M.D.,	77
On Water as a Constituent of Salts. By Thomas Graham, Esq.,	79
On the Refraction and Polarization of Heat. By Professor Forbes,	82
Supplementary Notice on the Chemical Analysis of the Animal Remains of Burdiehouse. By Arthur Connell, Esq.,	84
On the History of the Arch. By Dr Traill,	87
Dr Gregory exhibited the apparatus by which Dobereiner effects the conversion of Alcoholic into Acetic Acid, by the action of Platinum,	90
On the Anatomy of the Char. By Dr Knox,	90
On the Application of Hot-Air Blasts in the Manufacture of Cast-Iron. By Dr Clark, Aberdeen,	91
On the Ruins of Babylon. Part I. By Dr Traill,	91
On the Ruins of Babylon. Part II. By Dr Traill,	93
On the Expansibility of different kinds of Stone. By Alex. J. Adie, Esq., Civil Engineer,	95
On the Action of Voltaic Electricity on Alcohol, Ether, and Aqueous Solutions. By Arthur Connell, Esq.,	96
A Review of some of the more important Physical Truths contained in the writings of the Greek Philosophers, preparatory to an at-	

tempt to shew that the more ancient language of Greece was based upon the Truths of Natural Philosophy. By the Rev. Archdeacon Williams,	98
On the Poisonous Properties of Hemlock, and its lately discovered Alkaloid, Conia. By Dr Christison,	102
Notes on the Geology of Auvergne, particularly in connection with the Origin of Trap Rocks and the Elevation Theory. By Professor Forbes,	105
Notice of a new Compound of Sulphur, which is probably a Sulphurate of Nitrogen. By Dr Gregory,	106
On another new Compound of Sulphur, analogous to the Mercaptan of Zeise. By Dr W. Gregory,	106
On a Curious Phenomenon observed in the Island of Cephalonia, and on the proximate cause of Earthquakes in the Ionian Islands. By Dr John Davy,	107
Some Observations on Atmospherical Electricity. By Dr John Davy,	108
Essay towards establishing the Primary Properties of Parallel Lines. By Mr W. Nichol,	109
On the Mathematical Form of the Gothic Pendant. By Professor Forbes,	111
On the Occurrence of Megalichthys Hibberti, in a bed of Cannel Coal in the West of Fifeshire; with observations on the supposed Lacustrine Limestone of Burdiehouse. By Leonard Horner, Esq., F.R.S.S.L. & E.,	112
On the Circular Polarization of Heat, whether accompanied or unaccompanied by Light. By Professor Forbes,	113
Address on the Keith Prize being presented to Professor Forbes. By Dr Hope, V.P., R.S.E.,	114
On the Non-Hellenic portion of the Latin Language. By the Venerable Archdeacon Williams,	122
On the Sources and Composition of the different kinds of Gamboge. By Dr Christison; and on the Botanical Origin of Gamboge. By Dr Graham,	123
Observations and Experiments on the Coloured and Colourable Matters in the Leaves and Flowers of Plants, particularly in reference to the principles upon which Acids and Alkalies act in producing Red, and Yellow, or Green. By Dr Hope, V.P., R.S.E.,	126
On Dyspnœa, and other Sensations experienced on the Summit of Mount Blanc. By Martin Barry, M.D.,	129
Mr Smith of Jordanhill made a verbal communication regarding a change in the relative levels of the land and sea on the West Coast of Scotland,	130
Memorandum respecting the Polarization of Heat. By Professor Forbes,	130
On Paracyanogen and its Compounds. By James F. W. Johnston, Esq.,	131

On the newly discovered Microscopic Entozoon, infesting the Muscles of the Human Body. By Dr Knox,	133
On the Origin of the Adjective. By Professor Pillans,	135
On Single and Correct Vision, by means of Double and Inverted Images on the Retina. By Dr Alison,	136
Observations on the Chemical Nomenclature of Inorganic Compounds. By Dr Hope,	139
On the Occurrence of the Clupea Alba, or White Bait, and of the Raniceps Trifurcatus, or Tadpole Fish, in the Firth of Forth. Communicated by Dr Parnell,	141
Account of a visit to the Governor of the Chinese Frontier Town of Mai-ma-tchin, bordering with Kiachta, in Siberia. By a General Officer in the Russian Service. Communicated by the Secretary,	142
An Attempt to ascertain the Relative Positions of the Athenian and Syracusan Lines before Syracuse, from the Description of Thucydides. By Professor Dunbar,	143
Researches on Heat. Second Series. By Professor Forbes,	144
On the Teeth of the Cachelot. By Dr Knox,	146
On an arrangement of the Planets and Satellites, according to their Distances and Masses. By John Paterson, Esq., Schoolmaster of Douglas,	15
Notice regarding the Composition and Properties of certain Concrete Juices, resembling Gamboge. By Dr Christison,	151
Dr Macdonald on a proposed improved system of Chemical Nomenclature,	152
Farther account of Indications of Changes in the Relative Levels of the Sea and Land. By James Smith, Esq., of Jordanhill,	153
Observations on Terrestrial Magnetism, made in different parts of Europe, especially with reference to the influence of Height. By Professor Forbes,	154
Notice respecting a new Reflecting Microscope. By Mr Guthrie,	155
Some observations were made by Dr Martin Barry, on Unity of Organization in the Animal Kingdom,	155
On one Troja. By the Venerable Archdeacon Williams,	155
On Tea Oil. By Robert D. Thomson, M.D.,	156
Observations on a new species of British Gurnard, and on a species of Sole new to Science. By Richard Parnell, M.D.,	157
On Aplanatic Telescopes; a posthumous paper by the late Archibald Blair, Esq. Communicated by Professor Forbes,	158
Sir Charles Bell gave a verbal notice regarding the importance of the circulation in the Medulla Oblongata, and the office of the Vertebral Artery,	158
On the condition of the Earth, as it is first described in the Mosaic Account of the Creation. By Mungo Ponton, Esq.,	159
On the Result of Experiments on the Weight, Height, and Strength, of above 800 individuals. By Professor Forbes,	160
Description of a Single Achromatic Eye-Glass. By Edward Sang, Esq.,	161

On the Action of Disintegrated Surfaces of Crystals upon Light. By Sir David Brewster,	148
Observations on the Pulsation of the Heart and Arteries. By Dr Knox,	148
On an Expression for the effort required to ascend Planes of differ- ent Inclinations. By Professor Forbes,	149
Observations on some new Species of British Fishes. By Dr Par- nell,	150
On the Power of the Periosteum to form new Bone. By Professor Syme,	153
On the Action of Voltaic Electricity or Pyroxylic Spirit, and on Solutions in Water, Alcohol, and Ether. By Arthur Connell, Esq.,	156
Geological Observations on Binny-Crag in West Lothian. By Charles Maclaren, Esq.,	159
Notice of Experimental Researches into the Laws of certain Hydro- dynamical Phenomena, that have not hitherto been reduced into conformity with known laws. By John Scott Russell, Esq.,	161
List of a large Collection of preserved Fishes, presented to the Royal Society by Dr Parnell,	164
On the Constitution of the Earth's Atmosphere in remote Geolo- gical Epochs. By Professor Johnston, Durham,	165
Account of a new Species of British Bream, and a Species of Skate new to Science, with a List of, and Observations on, the Fishes of the Firth of Forth and Neighbourhood. By Richard Parnell, M.D.,	166
Notice on the Composition of the Right Prismatic Baryto-Calcite, the Bicalcareo-Carbonate of Baryta of Dr Thomson. By Pro- fessor Johnston,	167
An Explanation of the Aristotelian Expression <i>Μετα τα Φυσικα</i> , with some inferences from the Explanation. By the Venerable Arch- deacon Williams,	168
On the Food of the Herring and Salmon. By John Stark, Esq.,	170
Dr Barry made some verbal remarks on the Physiology of the Pro- teus Anguinus,	170
Remarks on the Ossiferous Caves of Cefn, in Denbighshire. By Dr Traill,	176
Experiments on the Growth of the Fry of the Salmon, from the ex- clusion of the Ova to the age of seven months. By Mr John Shaw,	178
On the Terrestrial Mechanism of the Tides. By John Scott Rus- sell, Esq.,	179
Notice regarding the Composition of Dr James's Fever Powder. By Dr Douglas Maclagan,	183
Observations on the Cysticercus Cellulosæ inhabiting the Human Muscles. By Dr Knox,	185
Examination of certain Objections to the Theory of Isomorphism. By Henry Madden, Esq.,	186
Observations on the Parr and Young of the Salmon. By Dr Parnell,	187

Notice of the remarkable Mathematical Properties of a certain Parallelogram. By John Scott Russell, Esq.,	187
On the Composition of a new Ink, which, by resisting chemical deletion, promises to diminish the chances of the successful falsification of Bills, Deeds, and other Documents. By Professor Traill,	189
Abstract of first part of Memoir on the Mid-Lothian and East-Lothian Coal Districts. By David Milne, Esq.,	191
Memorandum concerning different kinds of Heat being susceptible of polarization by transmission through a given bundle of Mica Plates. By Professor Forbes,	192
Notice regarding a New British Species of Coregonus. By Dr Parnell,	194
Abstract of Part II. of Memoir, descriptive and explanatory of the Mid-Lothian and East-Lothian Coal Fields. By David Milne, Esq.,	195
Practical Researches on Respiration. By Dr D. B. Reid,	199
The Keith Medal awarded by the Council, to Mr John Scott Russell for his Researches on Hydrodynamics, was presented by the Vice-President,	199
Observations on the Fur Seal of Commerce. By Robert Hamilton, Esq.,	200
On the Wild Ox of Scotland. By Dr Knox,	201
On the Third Pair of Nerves. By Sir C. Bell,	202
Inquiry whether Sea Water has its Maximum Density at some degrees above its freezing point, after the manner of Fresh Water. By Dr Hope,	203
On the Origin and Compound Functions of the Facial Nerve, or Portio Dura of the Seventh Nerve. By Sir C. Bell,	205
Description of the Hydrodynameter, a new instrument for shewing the rate of Sailing of Ships, and Velocity of Currents, Rivers, Tides, &c. By Mr R. Adie of Liverpool. Communicated by Dr Traill,	206
A Verbal Communication on the Osseous Structure of Fishes. By Dr Macdonald,	207
Researches on Heat. Third Series. By Professor Forbes,	207
Remarks on the Illustrations presented by the surface of the Moon, respecting certain Geological Phenomena. In a Letter to Sir J. Robison, K.H., from Professor Nichol, University of Glasgow,	210
On the Fourth and Sixth Nerves of the Brain, being the concluding paper on the distinction observed in the Nerves of the Encephalon and Spinal Marrow. By Sir C. Bell,	213
On the Superficial Deposits of Gravel, Clay, Sand, &c., which cover the Formations of the Lothians and South Coast of Fife. By David Milne, Esq.,	214
Investigation of a New Series for the Rectification of the Circle. By J. Thomson, LL.D., Glasgow,	216
On the Real Nature of Symbolical Algebra. By D. F. Gregory, B.A.,	217

On a New Method in the Conic Sections. By J. Scott Russell, Esq.,	217
Discussion of one year's Observations of Thermometers sunk to different depths in different localities in the neighbourhood of Edinburgh. By Professor Forbes,	223
On the Law which connects the Elastic Force of Vapour with its Temperature. By John Scott Russell, Esq.,	227
Abstract of a Paper on Results of Observations made with Whewell's New Anemometer. By Mr John Ranken. Communicated by Professor Forbes,	231
Notice respecting an Intermitting Brine Spring discharging Carbonic Acid Gas, near Kissingen in Bavaria. By Professor Forbes,	233
Notice on the Geology of Gottland, from the observations of Mr Laing. By Dr Traill,	236
Notice regarding some points in Hydrodynamics that have been misunderstood. By J. Scott Russell, Esq.,	238
On the Colour of Steam under certain circumstances. By Professor Forbes,	242
On the Meaning of the Homeric terms <i>θεμισ, δίκη, τιμη, ποινή</i> , with their more important compounds and derivatives. By the Venerable Archdeacon Williams,	243
The Colours of the Atmosphere considered with reference to a paper "On the Colour of Steam under certain circumstances," read at the last meeting of the Royal Society. By Professor Forbes,	244
Notice of some observations made during the Storm of January 1839. By J. Scott Russell, Esq.,	246
On Fresnel's Law for the Intensity of Reflected and Refracted Light. By Professor Kelland,	246
On a New Galvanic Battery, and an Improved Voltmeter. By Martyn Roberts, Esq. Communicated by Sir John Robison,	248
Notice upon the Alcoholic Strength of Wines. By Dr Christison,	249
Notice respecting the Drying-up of the Rivers Teviot, Clyde, and Nith, and their Tributaries, on 27th November 1838. By David Milne, Esq.,	252
Memorandum on the Intensity of Reflected Light and Heat. By Professor Forbes,	254
On the Theory of the Motion of Waves. By Professor Kelland,	258
On a new method of shewing the unequal Expansion of Crystals. By Professor Forbes,	259
On the Diminution of Temperature with Height in the Atmosphere at different seasons of the year. By Professor Forbes,	259
Notice respecting the relative Voltaic Agency of Circuits of Copper and Zinc, and Zinc and Iron. By Martyn Roberts, Esq.,	261
Investigation of Analogous Properties of Co-ordinates of Elliptic and Hyperbolic Sectors. By W. Wallace, LL.D., Emeritus Professor of Mathematics, University of Edinburgh,	262
On the Newer Tertiary or Pliocene Deposites of Scotland. By James Smith, Esq., of Jordanhill,	263

On certain circumstances affecting the Colour of Blood during Coagulation. By Dr P. K. Newbigging. Communicated by Professor Forbes,	263
On Two Storms which passed over the British Islands in the end of November 1838. By David Milne, Esq.,	264
Solution of a Functional Equation, with its application to the Parallelogram of Forces, and to Curves of Equilibration. By Dr Wallace, Emeritus Professor of Mathematics,	273
On General Differentiation. Part I. By Professor Kelland,	274
Experiments on the Development and Growth of the Salmon, from the exclusion of the Ovum to the Age of two years. By Mr Shaw, Drumlanrig. Communicated by James Wilson, Esq.,	275
On the use of the word "Temperature" in the Analytical Theory of Heat. By Professor Kelland,	279
On the Effect of the Mechanical Texture of Screens on the immediate Transmission of Radiant Heat. By Professor Forbes,	281
On the Functions of the Roots of the Spinal Nerves, in corroboration of former observations, proving that the anterior roots are nerves of motion, and the posterior nerves of sensation. By Sir Charles Bell, K.H.,	284
On General Differentiation. Part II. By Professor Kelland,	285
On the means employed to prevent Forgeries of Bank Notes, Bills of Exchange, Cheques, &c. By Dr Traill,	285
Observations on the influence of various circumstances in Vegetation, in modifying the Physiological Actions of Plants. By Dr Christison,	286
A Specimen of <i>Clavagella Balanorum</i> (Scacchi), presented by Sir Thomas Brisbane, Bart., President of the Society, was laid on the table, with remarks by Dr Traill,	288
On the Cosmogony described in the Sixth Eclogue of Virgil, and on its relation to the Theories of Modern Geology. By the Venerable Archdeacon Williams,	291
A brief notice relative to an Aërolite which was seen to fall near Juvinas, in the Department of the Ardèche in France, on the 15th June 1821. By Professor Forbes,	292
On the Persian mode of making Malleable Iron direct from the Ore. By James Robertson, Esq. Communicated by Robert Bald, Esq.,	293
On the Fatal Effects of Air drawn into the Veins during Surgical Operations on the Neck and Shoulder. By Sir Charles Bell, K.H.,	293
On Sulphuret of Cadmium, a New Mineral, (first observed by Lord Greenock). By Arthur Connell, Esq.,	294
On an Optical Illusion, giving the idea of an Inversion of Perspective, in viewing objects through a Telescope. By Professor Forbes,	296
List of African Shells, collected by J. O. M'William, Esq., Surgeon, R.N., and presented by him to the Royal Society, through Dr Traill,	296

Collection of Fossil Shells, from the great deposit near Uddevalla, in Sweden, presented by R. S. G. Kilbee, Esq., through Professor Forbes,	297
Notice regarding the Growth of Plants in close Glazed Cases. By Allan Maconochie, Esq.,	299
Results of Additional Experiments on Terrestrial Magnetism. By Professor Forbes,	299
A Collection of Fossil Shells from Italy, was presented by Chevalier Michelotti of Turin,	300
A Collection of Organic Remains from the Airdrie Coal Measures, was exhibited by Mr Bald,	300
A Collection of Fossil Organic Remains from Touraine, was presented by Sir George Mackenzie, Bart.,	301
Specimens of Fossil Vegetables and Shells from Shetland and Skye, were presented by Professor Necker of Geneva, Hon. F.R.S.E.,	301
Additional Remarks on the fatal effects of air admitted into the Veins of the Neck during Surgical Operations. By Sir Charles Bell,	301
On the Origin and Progress of Grecian Sculpture. By Dr Traill. Part I.,	301
Account of Earthquakes felt in Scotland during the Autumn and Winter of 1839. By David Milne, Esq.,	302
On certain Physiological Inferences which may be drawn from the study of the Nerves of the Eyeball. Part I. By Dr Alison,	305
On the Plane and Angle of Polarization at the surfaces of Crystals. By Professor Kelland,	307
On the Polarization of the Chemical Rays of Light. By Dr Sutherland, Liverpool,	312
On the Nutrition of Vegetables. Part I. By Dr H. R. Madden, Penicuik. Communicated by Dr Christison,	313
On the Fossil Fishes of the Old Red Sandstone of Orkney. By Dr Traill,	314
Communication respecting Instruments for registering Shocks of Earthquakes. By David Milne, Esq.,	314
On certain Physiological Inferences which may be drawn from the study of the Nerves of the Eyeball. Part II. By Dr Alison,	316
The Secretary stated the substance of a communication by Mr Atkinson, on the subject of Rain-Gauges, and of another on an Instrument for measuring the Force of Wind,	317
On the mode in which Musket-Balls and other Foreign Bodies become enclosed in the Ivory of the Tusk of the Elephant. By John Goodsir, Esq. Communicated by Professor Syme,	318
On the Theory of Waves. Part II. By Professor Kelland,	319
Analysis of Berg-Meal from Umea Lapmark. By Dr Traill,	321
On the Force of Solar Radiation in the Arctic Regions. By Dr Richardson. Communicated by the Secretary,	322
An Attempt to reconcile the Theories of the Debacle and the Action of Glaciers, in accounting for the Distribution of Erratic Blocks. By Sir G. S. Mackenzie, Bart.,	323

Contributions to Optical Meteorology. No. I. On the Polarization of the Light of the Sky. By Professor Forbes,	324
Farther Researches on the Voltaic Decomposition of Aqueous and Alcoholic Solutions. By Professor Connell,	326
On the Preparation of Paracyanogen, and the Isomerism of Cyanogen and Paracyanogen. By Samuel Brown, M.D. Communicated by Dr Christison,	328
A Notice was communicated by Mr Milne, from Joseph Atkinson, Esq., of results obtained with Rain-Gauges of different forms,	329
On the Sea-Level of the Neapolitan Coast. By Sir John S. Forbes, Bart.,	331
On the Supposed Progress of Human Society, from Savage to Civilized Life, as connected with the Domestication of Animals, and the Cultivation of the Cerealia. By John Stark, Esq.,	332
On the Parallel Roads of Glen Roy, with an Examination of Mr Darwin's Theory of their Formation. Part I. By Sir Thomas Dick Lauder, Bart.,	334
On the Polarizability of Heat from different sources. By Professor Forbes,	334
Account of the Fossil Species of the genus Solarium, Lamarck, found in the Supercretaceous Group in Italy. By M. Le Chevalier Michelotti of Turin. Communicated by Dr Traill,	334
On the Parallel Roads of Glen Roy, with an Examination of Mr Darwin's Theory of their Formation. Part II. By Sir Thomas Dick Lauder, Bart.,	335
On the Visibility of rapidly revolving Lights, made in reference to the improvement of Lighthouses. By Alan Stevenson, LL.B., Civil Engineer,	336
On the Theory and Construction of a Seismometer—an Instrument for measuring Earthquake Shocks and other Concussions. By Professor Forbes,	337
On the Circulation of the Blood, and the difference of the Laws of Fluids moving in living and dead tubes. Part I. By Sir Charles Bell,	339
Experimental Researches on the Production of Silicon from Paracyanogen. By Samuel Brown, M.D. Communicated by Dr Christison,	341
On the Anatomy of the <i>Amphioxus lanceolatus</i> of Yarrell. By John Goodsir, Esq. Communicated by Professor Syme,	344
On the Circulation of the Blood, and the difference of the Laws of Fluids moving in living and dead tubes. Part II. By Sir Charles Bell,	*331
On a Peculiar Structure observed by the Author in the Ice of Glaciers. By Professor Forbes,	*332
Report of a Committee on the Papers of David Hume, bequeathed to the Society by the late Baron Hume. Communicated by the Council,	*338
On the Optical Properties of Greenockite, by Sir David Brewster, in a Letter to Lord Greenock,	*342

On the Results of the most recent Experiments on the conducting power for Heat of different Soils. By Professor Forbes, . . .	*343
On the Cultivation of the Sugar Cane in Spain. By Dr Traill, . . .	*346
On the Theory of the parallel Roads in the Glens of Lochaber. By Sir G. S. Mackenzie, Bart,	*348
On the Results obtained with different forms of Rain-Gauges. By Joseph Atkinson, Esq. Communicated by David Milne, Esq.,	*350
On the Identity of the Animal Matters which form the Basis of the Animal Fluids and Solids. By James Stark, M.D.,	353
On the Parasitic Fungi found growing on the Bodies of Living Animals. By John Hughes Bennett, M.D. Communicated by Dr Graham,	356
On the Action of Water on Lead. By Dr Christison,	358
On the Necessity of the Sense of Muscular Action to the full exercise of the Organs of the Senses. By Sir Charles Bell, K.H.,	361
Geological Notes on the Alps of Dauphine. By Professor Forbes. Part I., 363. Part II.,	365
On the most recent Disturbance of the Crust of the Earth in respect to its suggesting a Hypothesis to account for the Origin of Glaciers. By Sir G. S. Mackenzie, Bart.,	364
On a new Species of British Grass of the Genus <i>Holcus</i> , and Observations on some of the more closely allied species of Grasses found in the neighbourhood of Edinburgh. By Richard Parnell, M.D.,	367
On the ultimate Secreting Structure of Animals. By John Goodsir, Esq. Communicated by Professor Syme,	369
On the Theoretical Investigation of the absolute intensity of Interfering Light. By Professor Kelland,	371
On the Quarantine Classification of Substances with a view to the prevention of Plague. By John Davy, M.D.,	372
Results of Experiments on the Specific Heat of Certain Rocks. By M. Regnault of Paris. Communicated by the Secretary, . . .	373
On the effect of Snow in apparently increasing the Force of Solar Radiation. By Professor Forbes,	374
On the Structure, Formation, and Movement of Glaciers; and the probable cause of their former extension and subsequent disappearance. By James Stark, M.D.,	375
On Plague, in relation to the question of its Nature, whether or not a Contagious Disease. By John Davy, M.D.,	380
Analysis of two new Minerals of the Zeolite Family. By Thomas Anderson, M.D. Communicated by Dr Christison,	381
Dr Christison exhibited specimens from the Government Superintendent of Tea Culture in Assam, illustrating the several ages at which the leaves of the Assam and China Tea Plants are used for making the different commercial varieties of Black and Green Tea,	382
On the construction of a new Music Hall. By Sir George S. Mackenzie, Bart.,	383
On the Geology of Roxburghshire. Part I. By David Milne, Esq., 383. Part II.,	399

Letter on Terrestrial Magnetism, addressed to the Secretary. By Professor Hansteen of Christiania,	388
Notice of the occurrence in Scotland of the <i>Tetrao medius</i> , shewing that supposed species to be a Hybrid. By James Wilson, Esq.,	395
On the Coloration of the Blood. By the late Daniel Ellis, Esq. Communicated by Dr Christison,	395
On the Growth of the Salmon. By Mr Andrew Young, Invershin, Sutherlandshire. Communicated by James Wilson, Esq.,	398
On the property of transmitting Light, possessed by Charcoal and Plumbago, in fine plates and particles. By John Davy, M.D.,	401
Chemical Observations on the Flowers of the <i>Camellia Japonica</i> , <i>Magnolia grandiflora</i> , and <i>Chrysanthemum Leucanthemum</i> , and on three proximate principles which they contain. Part I. By Dr Hope,	403
On the Law of Visible position in Single and Binocular Vision, and on the representation of Solid Figures by the union of dissimilar plane pictures on the Retina. By Sir David Brewster, K.H.,	405
Papers on Glaciers. No. I. Account of a Geometrical Survey of the Mer de Glace of Chamouni. By Professor Forbes,	406
On the Anatomy of the Human Placenta. By John Goodsir, Esq;	407
On the mode in which Sound is produced and diffused, and on the Vibrations caused in the quality of Sound by substance and form. By Sir George S. Mackenzie, Bart.,	409
Papers on Glaciers. No. II. Describing the Rate of Motion of the Ice of the Mer de Glace deduced from observation. By Professor Forbes,	409
On the Nature, Locality, and Optical Phenomena of <i>Muscæ volitantes</i> . By Sir David Brewster, K.H.,	411
On the Structure of the Lymphatic Glands. By John Goodsir, Esq.,	411
On the Determination of Heights by the Temperature of Boiling Water. By Professor Forbes,	412
Papers on Glaciers. No. III. On the Structure of Glaciers, and the cause of their motion. By Professor Forbes,	414
Observations on the Temperature and Hygrometric state of the Island of Barbadoes. By R. Lawson, Esq., Assistant-Surgeon of H.M. 47th Regiment. Communicated by Henry Marshall, Esq.,	416
On the Growth and Migration of the Sea Trout (<i>Salmo Trutta</i>). By Mr John Shaw, Drumlanrig. Communicated by James Wilson, Esq.,	416
Experiments with Hydro and Thermo Electric Currents; and an Examination of Metals long exposed to Thermo-Electric Currents. By R. Adie, Esq. Communicated by Dr Traill,	417
Chemical Observations on the Flowers of the <i>Camellia Japonica</i> , <i>Magnolia grandiflora</i> , and <i>Chrysanthemum Leucanthemum</i> , and	

on three proximate principles which they contain. Part II. By Dr Hope,	419
On certain negative actions of Light. By Professor Moser of Koenigsberg. In a Letter to Sir David Brewster,	422
On the Specific Gravity of certain substances commonly considered lighter than Water. By Dr Davy,	424
On the presence of Organic Matter in the purest waters from Ter- restrial Sources. By Professor Connell,	426
Biographical Sketch of the late Sir Charles Bell. By Sir John MacNeill,	427
Notice regarding the Bebeeru Tree of British Guiana. By A. Douglas Maclagan,	427
An attempt to explain the phenomena of the Freezing Cavern at Oranburg. By Dr Hope,	429
Observations on the Temperature of the Earth in India. By John Caldecott, Esq. Communicated in a Letter to Professor Forbes,	432
Researches in Hydrodynamics. Second Memoir. On Waves. By J. Scott Russell, Esq.,	433
On the Influence of various circumstances in Vegetation upon the activity of plants. Part II. The Umbelliferous Narcotics. By Dr Christison,	437
A Description of Congenital Malformation of the Auricle and Ex- ternal Meatus of both sides. in three persons; with Experiments on the state of Hearing in them, and Remarks on the mode of Hearing by conduction through the hard parts of the Head in general. By Dr Allen Thomson,	443
On the Luminousness of the Sea. By Dr Traill,	446
On the Fossil Vegetables of the Sandstone of Ayrshire, illustrative of a series of them, as a Donation for the Society's Museum. By J. Shedden Patrick, Esq.,	448
On a new Self-Registering Barometer. By Robert Bryson, Esq.,	450
On the Vibrations of an Interrupted Medium. By Professor Kel- land,	450
On certain laws of the Resistance of Fluids. By J. Scott Russell, Esq.,	451
Chemical Examination of the Tagua Nut, or Vegetable Ivory. By Professor Connell,	451
On the Tides of the Firth of Forth, and the East Coast of Scotland. By J. Scott Russell, Esq.,	453
Additional Observations as to the Poisonous Properties of <i>Oenanthe</i> <i>Crocata</i> . By Dr Christison,	453
On the Cellular Fibre, and the incrusting Matters of Plants. By Mr P. F. H. Fromberg. Communicated by Professor Johnston,	454
On a remarkable Oscillation of the Sea observed at various places on the Coasts of Great Britain, in the first week of July 1843. By David Milne, Esq.,	457
On the Human Races in Britain, enumerated by Tacitus. By Dr Hibbert Ware,	459

On the existence of an Osseous Structure in the Vertebral Column of Cartilaginous Fish. By James Stark, M.D.,	463
Farther Observations on Glaciers. By Professor Forbes,	465
The President announced that the Keith Prize had been awarded to Professor Forbes for his papers on Glaciers,	465
On the Development, Structure, and Economy of the Acephalocysts of Authors; with an account of the Natural Analogies of Entozoa in general. By Harry D. S. Goodsir, Esq. Communicated by John Goodsir, Esq.,	466
Account of a Repetition of Dr Samuel Brown's processes for the Conversion of Carbon into Silicon. By George Wilson, M.D. Communicated by the Secretary,	468
On Dr Matthew Stewart's General Theorems. By T. S. Davies, Esq.,	471
Inquiry into the Aborigines of the British Islands. Part II. On the claims of the Cymric and Gaelic races to be thus considered. By Dr S. Hibbert Ware,	471
On the Knowledge of distance given by Binocular Vision. By Sir David Brewster, K.H.,	475
On the Geology of Cockburn Law, and its neighbourhood. By William Stevenson, Dunse. Communicated by David Milne, Esq.,	475
Notice regarding the Indian Grass Oil or Oil of Andropogon Calamus-Aromaticus. By Thomas G. Tilley, Phil. D. Communicated by Dr Christison,	478
