

VOL. VII.—1893.

THE JOURNAL
OF
LARYNGOLOGY,
RHINOLOGY, AND OTOTOLOGY;

*AN ANALYTICAL RECORD OF CURRENT LITERATURE RELATING TO
THE THROAT, NOSE, AND EAR.*

EDITED BY

R. NORRIS WOLFENDEN, M.D. Cantab.,
JOHN MACINTYRE, M.B. Glasgow,

AND

DUNDAS GRANT, M.A., M.D., F.R.C.S. Eng.,

WITH THE ASSISTANCE OF

Dr. BARCLAY J. BARON (Bristol). Dr. SANDFORD (Cork).

And with the co-operation of

DR. RICARDO BOTEY (BARCELONA)
DR. BRYSON DELAVAN (NEW YORK)
DR. DRAISPUL (ST. PETERSBURG)
PROF. GUYE (AMSTERDAM)
DR. MIDDLEMASS HUNT (LIVERPOOL)
DR. VALERIUS IDELSON (BERNE)
DR. JOAL (PARIS)
DR. KARWOWSKI (WARSAW)
DR. JOHN N. MACKENZIE (BALTIMORE)
DR. GRAZZI (FLORENCE)
DR. SANDFORD (CORK)
DR. LUBET-BARBON (PARIS)

DR. G. W. MAJOR (MONTREAL)
PROF. MASSEI (NAPLES)
DR. W. ROBERTSON (NEWCASTLE-ON-TYNE)
DR. J. MICHAEL (HAMBURG)
DR. HOLGER MYGIND (COPENHAGEN)
DR. PORTER (ST. LOUIS)
DR. SAJOUS (PHILADELPHIA)
DR. SENDZIAK (WARSAW)
PROF. RAMON DE LA SOTA (SEVILLE)
DR. HICGUET (BRUSSELS)
DR. MILLIGAN (MANCHESTER)
DR. LICHTWITZ (BORDEAUX)

INHALERS.

THE B. W. & CO. PORTABLE PIPE CHLORIDE OF AMMONIUM INHALER.

(As designed by Dr. STENSON HOOKER.)

The beneficial effects of inhalations of Ammonium Chloride have been long known to the Medical Profession, and the only objection to the more extensive use has been the high cost of instruments for the inhalation of Ammonium Chloride

Vapour. We have, however, at the instance of Dr. HOOKER, introduced a portable Pipe Inhaler. It is composed throughout of earthenware. The bowl of the pipe contains an inner vessel, perforated at the base, to promote combination of the vapours, and is divided down the middle by a septum. In the base of the bowl itself there is placed a sponge, which, when saturated with water, thoroughly washes the fumes. This Inhaler possesses the following advantages over any temporary apparatus:—It is extremely portable, and not liable to get out of order easily. It may be thoroughly cleansed by washing, and is moderate in price. This inhaler may be employed by patients in any position, or while walking, sitting, or reclining.

The Inhaler, together with two stoppered bottles, containing Hydrochloric Acid and Solution of Ammonium, for use with the instrument, is supplied to the Profession at 5s. each; retail, 7s. 6d.

THE B. W. & CO. ORO-NASAL MENTHOL INHALER.

For the effective use of Menthol in the treatment of irritable, inflamed, or catarrhal conditions of the naso-pharyngeal mucous surfaces, the Oro-Nasal Inhaler, as suggested by Dr.

MACNAUGHTON JONES, answers every purpose. As its name indicates, it includes both a nasal and an oral attachment, and can be used for the inhalation of other

medicaments as well as menthol. Will be found of excellent service in the treatment of hay fever, rhinitis, ozena, etc. A bottle of menthol solution, with camel-hair brush, is included in the case, which, complete, is supplied to the Medical Profession at 3s. each. We shall be glad at all times to forward leaflets and pamphlets bearing on the above apparatus to any medical man who may address us.

THE VEREKER IMPROVED CHLORIDE AMMONIUM INHALER.

The value of Ammonium Chloride Vapour in the treatment of the affections of the mucous membrane of the throat is widely appreciated, but it is absolutely necessary that the vapour be delivered perfectly pure; free, that is, from

both alkaline and acid excess. It is claimed for the Vereker Inhaler, in its improved form, that the neutrality of the vapour, once the apparatus is properly set, is ab-

solutely to be relied upon, and it may be inhaled without the slightest irritation in all catarrhal conditions of the fauces and pharynx. To meet special cases any volatile body desirable may be used with the Ammonium Chloride Vapour by adding it to the liquid in the wash bottle. The "Vereker" is furthermore in a really portable form, easily charged, and, once properly arranged, contains a sufficiency of material to last for a considerable number of inhalations. Supplied to the Medical Profession in neat cases, at 5s.; retail, 7s. each.

THE B. W. & CO. PINOL-EUCALYPTIA DRY INHALER.

This little instrument is of the simplest construction, and therefore not liable to get out of order. The medicament—Phenol, Pinol, Eucalyptia, Terebene, as the case may be—is dropped into the wider end of the glass tube until the absorbent is sufficiently charged. The patient inspires through the mouthpiece, and the air drawn in, as it passes through the charged medium, becomes laden with the vapour of the particular inhalant concerned. The Pinol-Eucalyptia Dry Inhaler may be used at all times without the slightest danger in throat or chest affections. It has lately become remarkably popular on account of its adoption and success as a palliative in the treatment of, and as a preventive even against, asthmatic attacks. When used in connection with our Eucalyptia, it will be found of real service (as evidenced by very recent testimony) as a protective against malarial fevers. Supplied to the Medical Profession, in neat cases containing also a sufficiency of both Pinol and Eucalyptia for fair trial, at 1s. 2d. each.
