<i>List of Contributors</i>	page viii
<i>Preface</i>	ix
by David Jordan, Nadia Mazza & Sibylle Schroll	
Introduction	1
1 Auslander–Reiten Theory of Finite-Dimensional Algebras	5
by Raquel Coelho Simões	
1.1 Bound Path Algebras	6
1.2 Representations of a Bound Path Algebra	9
1.3 Representation Finite Hereditary Algebras	12
1.4 Auslander–Reiten Theory	16
1.5 Geometric Models	25
Bibliography	43
2 τ-tilting Theory – an Introduction	46
by Hipolito Treffinger	
2.1 Introduction	46
2.2 Towards τ -tilting Theory	48
2.3 τ -tilting Theory: Basic Definitions	60
2.4 τ -tilting Pairs and Torsion Classes	63
2.5 A (τ -)tilting Theorem	67
2.6 τ -tilting Reduction	70
2.7 Torsion Classes, Wide Subcategories and Semibricks	73
2.8 The Poset Tors- A	76
2.9 Mutations of τ -tilting Pairs and Maximal Green Sequences	78
2.10 τ -tilting Finite Algebras	82
2.11 Brauer–Thrall Conjectures and τ -tilting Theory	83
2.12 Dimension Vectors and g -vectors	84

2.13	τ -tilting Theory and 2-term Silting Complexes	87
2.14	g -vectors and τ -tilting Theory	90
2.15	The Wall-and-chamber Structure of an Algebra	94
	Bibliography	104
3	From Frieze Patterns to Cluster Categories	109
	by Matthew Pressland	
3.1	Introduction	109
3.2	Frieze Patterns	111
3.3	Cluster Algebras	116
3.4	Cluster Categories	123
3.5	Appendix: the Bounded Derived Category	137
	Bibliography	141
4	Infinite-dimensional Representations of Algebras	146
	by Rosanna Laking	
4.1	Algebras and Modules	147
4.2	Direct Limits	151
4.3	Duality	155
4.4	Finite Matrix Subgroups and Pp-definable Subgroups	158
4.5	Pure Submodules and Pure-injective Modules	161
4.6	The Ziegler Spectrum	162
4.7	Finite-type and the Ziegler Spectrum	166
	Bibliography	167
5	The Springer Correspondence	169
	by Sam Gunningham	
5.1	The Statement of the Springer Correspondence	170
5.2	Springer Theory via Convolution	187
5.3	Springer Theory via Perverse Sheaves	198
	Bibliography	210
6	An Introduction to Diagrammatic Soergel Bimodules	212
	by Amit Hazi	
6.1	Motivation	212
6.2	The Diagrammatic Category \mathcal{D} of Soergel Bimodules	215
6.3	Some Diagrammatic Relations	220
6.4	Some Consequences and Applications	222
	Bibliography	225
7	A Companion to Quantum Groups	227
	by Bart Vlaar	
7.1	Introduction	227

7.2	Bialgebras	229
7.3	Quasitriangular Bialgebras and Braided Monoidal Categories	238
7.4	Drinfeld–Jimbo Quantum Groups	246
7.5	Quasitriangularity for $U_q\mathfrak{g}$	253
7.6	Coideal Subalgebras and Cylinder Braiding	263
	Bibliography	270
8	Infinite-dimensional Lie Algebras and Their Multivariable Generalizations	273
	by Brian Williams	
8.1	Infinite-dimensional Lie algebras	274
8.2	Multivariable Generalizations	281
8.3	Further Topics and Applications	304
	Bibliography	314
9	An Introduction to Crowns in Finite Groups	317
	by Gareth Tracey	
9.1	An Introduction to the Theory of Crowns	318
9.2	Equivalence Classes of Non-Frattini Chief Factors	325
9.3	An Application of Crowns: Minimal Generator Numbers	331
	Bibliography	334
10	An Introduction to Totally Disconnected Locally Compact Groups and Their Finiteness Conditions	335
	by Ilaria Castellano	
10.1	Introduction	335
10.2	Preliminaries on Topological Groups	337
10.3	Totally Disconnected Locally Compact Groups	347
10.4	Finiteness Properties for TDLC-groups	354
10.5	Willis' Theory of TDLC-groups: a Sketch	363
	Bibliography	366
11	Locally Analytic Representations of p-adic Groups	370
	by Andreas Bode & Nicolas Dupré	
11.1	Introduction	370
11.2	Basic Definitions	372
11.3	The Distribution Algebra	376
11.4	Fréchet–Stein Algebras	382
11.5	Appendix: Some Non-archimedean Functional Analysis	389
	Bibliography	393
