

INTERNATIONAL JOURNAL OF
**PATTERN RECOGNITION AND
 ARTIFICIAL INTELLIGENCE (IJPRAI)**

AIMS AND SCOPE

This journal publishes both applications- and theory-oriented articles on new developments in the fields of pattern recognition and artificial intelligence, and is of interest to both researchers in industry and academia. From the beginning, there has always been a close relationship between the disciplines of pattern recognition and artificial intelligence. The recognition and understanding of sensory data like speech or images, which are major concerns in pattern recognition, have always been considered as important subfields of artificial intelligence. On the other hand, topics like knowledge representation, inference, search or learning that belong to the center of artificial intelligence, have constantly attracted the attention of researchers working in pattern recognition. IJPRAI is the first to cover both fields in one periodical, and particular emphasis is put on papers which are in the intersection of both fields. However, it is open to articles from "pure" pattern recognition and "pure" artificial intelligence as well.

Cambridge: The Logical Choice

A Theory of Computer Semiotics

Semiotic Approaches to Construction and Assessment of Computer Systems

Peter Bøgh Andersen

"Because it systematically develops how semiotics can be applied to the study of human-computer interactions, HCI researchers will find the book stimulating, even if their own approach is different. Finally, systems builders who are languishing for lack of a methodology could do worse than to review Andersen's approach."

— Computing Reviews

Cambridge Series in Human-Computer Interaction 3

1997 416 pp. 44868-9 Paperback \$29.95

Computational Learning Theory

M. Anthony and N. Biggs

This text provides a framework for studying a variety of algorithmic processes, such as those currently in use for training artificial neural networks. The authors concentrate on an approximate model for learning and gradually develop the ideas of efficiency considerations. Finally, they consider applications of the theory to artificial neural networks.

Cambridge Tracts in Theoretical Computer Science 30

1997 157 pp. 59922-9 Paperback \$22.95

Technological Innovation

Oversights and Foresights

Raghu Garud, Praveen Nayyar, and Zur Shapira, Editors

This book addresses specific ways in which the slim odds of corporate success can be enhanced. It analyzes why companies choose certain new technologies, from a technological, economic, and institutional perspective. Based on multidisciplinary research on technological choice, the book bridges research and practice to provide an enlightening and practical study.

1997 385 pp. 55299-0 Hardback \$54.95

Information Seeking in Electronic Environments

Gary Marchionini

"...a welcome and needed addition to the information science literature...a well-written text on information seeking that is easily accessible by a broad audience...a great place to start building understanding of the information seeking process."

— Journal of the American Society for Information Science

Cambridge Series in Human-Computer Interaction 9

1995 236 pp. 44372-5 Hardback \$49.95
58674-7 Paperback \$19.95

Metamathematics, Machines and Gödel's Proof

Natarajan Shankar

This book describes the use of a computer program to check the proofs of several celebrated theorems in metamathematics including those of Gödel and Church-Rosser. The computer verification using the Boyer-Moore theorem prover yields precise and rigorous proofs of these difficult theorems. It also demonstrates the range and power of automated proof checking technology.

Cambridge Tracts in Theoretical Computer Science 38

1997 218 pp. 58533-3 Paperback \$24.95

Situated Cognition

On Human Knowledge and Computer Representations

William J. Clancey

This text differs from other purely philosophical treatises in that Clancey, an insider who has built expert systems for twenty years, explores the limitations of existing computer programs and compares them to human memory and learning capabilities. He examines the implications of "situated action" from the perspective of artificial intelligence specialists interested in building robots.

Learning in Doing: Social, Cognitive and Computational Perspectives

1997 c.375 pp. 44400-4 Hardback \$69.95
44871-9 Paperback \$27.95

Language at Work

Analyzing Communication in the Workplace to Inform Systems Design

Keith Devlin and Duska Rosenberg

This volume argues that situation theory, a theory of information couched in mathematics, has provided a uniform framework for the investigation of the creative aspects of language use. The authors explore the application of situation theory in the study of language use in everyday communication to improve human/computer interaction.

CSLI Lecture Notes

1997 c.250 pp. 1-57586-050-3 Hardback \$59.95
1-57586-051-1 Paperback \$19.95

Computational and Psychophysical Mechanisms of Visual Coding

Michael Jenkin and Laurence Harris, Editors

Both the biological and computational communities have addressed the task of designing or inferring visual coding strategies. This volume, with chapters by some of the most active contributors in the field of visual coding, describes some of the ingenious mechanisms used to code descriptions of visual phenomena in both areas. These chapters illustrate problems common to both communities and the models and algorithms proposed to solve them.

1997 373 pp. 57104-9 Hardback \$49.95

Basic Proof Theory

A. S. Troelstra and H. Schwichtenberg

"The book is mathematically rigorous and would provide a sound theoretical introduction for students and researchers interested in structural proof theory."

— Computing Reviews

The authors give examples of several areas of application, including the metamathematics of pure first-order logic (intuitionistic as well as classical); the theory of logic programming; category theory; modal logic; linear logic; first-order arithmetic; and second-order logic.

INSTRUCTIONS FOR AUTHORS

AIMS AND SCOPE

AIEDAM: *Artificial Intelligence for Engineering Design, Analysis and Manufacturing* is an archival research journal that is intended to reach two audiences: engineers and designers who see AI technologies as powerful means for solving difficult engineering problems; and researchers in AI and computer science who are interested in applications of AI and in the theoretical issues that arise from such applications. The Editor is specifically seeking original articles that develop new and interesting applications based on the most up-to-date research in all branches and phases of engineering, including analysis, synthesis and design; manufacturing and assembly; and concurrent engineering. The journal is interested in the use of AI in planning, design, analysis, simulation, spatial reasoning and graphics, manufacturing, assembly, process planning, scheduling, numerical analysis, and optimization. Areas of special interest include: knowledge-based (expert) systems for engineering, including knowledge acquisition and representation, control, and system architectures; theoretical work on the modeling of engineering problem-solving and design processes; the integration of AI-based techniques with numerical analysis tools, graphics and solid modeling packages, and engineering databases; and distributed design theory and application.

ORIGINALITY AND COPYRIGHT

To be considered for publication in **AIEDAM** a manuscript cannot have been published previously, nor can it be under review for publication elsewhere. Papers with multiple authors are reviewed with the assumption that all authors have approved the submitted manuscript and concur in its submission to **AIEDAM**. A Transfer of Copyright Agreement must be executed before an article can be published. Government authors whose articles were created in the course of their employment must so certify in lieu of copyright transfer. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

MANUSCRIPT SUBMISSION AND REVIEW

Three high quality copies of articles, in English, should be submitted to the Editor.

Professor William P. Birmingham, Editor

AIEDAM
Artificial Intelligence Laboratory
Department of Electrical Engineering and Computer Science
The University of Michigan
College of Engineering
128 ATL Building
1101 Beal Avenue
Ann Arbor, MI 48109-2110
Phone: (313) 936-1590. Fax: (313) 763-1260.
E-mail: wpb@cecs.umich.edu

Photocopies of typescripts will not be accepted for publication. For refereeing purposes only, good photocopies may be submitted. Upon acceptance of the manuscript the top copy and the original illustrations should be submitted for publication. Authors of accepted manuscripts are urged to submit their final manuscripts on diskette as well as on hard copy, identifying what software was used.

MANUSCRIPT PREPARATION AND STYLE

Paper should be typed in double spacing throughout, including tables, footnotes, references and legends to tables and figures. One side of the paper, only, should be used and there should be a margin of at least 2.5 cm all around. The position of tables and figures should be clearly indicated, in sequence, in the text. Tables, footnotes and legends to figures should be typed separately. Where it is essential for clear cross-referencing, particularly in mathematically-orientated material, paragraphs and

subparagraphs may be numbered, and the decimal system should be used, i.e. 1.1.1., 1.1.2., etc. A short running title of not more than 40 characters (including spaces) should be indicated if the full title is longer than this. The name of the laboratory where the work has been carried out should be indicated on the title page and the full postal address for the despatch of proofs and offprints should be included on a separate page. Minor corrections to the manuscript may be typed or neatly printed in ink; retyping is required for significant changes. Numbers should be spelled out when they occur at the beginning of a sentence; use Arabic numerals elsewhere.

MANUSCRIPT ELEMENTS AND ORDER

Unless there are obvious and compelling reasons for variation (e.g. review articles, short communications), manuscripts should be organized as follows:

Title page. This is page 1. The title should be concise, informative, and free of abbreviations, chemical formulae, technical jargon, and esoteric terms. This page should include (a) the article's full title, (b) names and affiliations of all authors, (c) the name, mailing address, and telephone number of the corresponding author, (d) the address for reprint requests if different from that of the corresponding author, (e) a short title of 50 characters or less, and (f) a list of the number of manuscript pages, number of tables, and number of figures.

Abstract and keywords page. This is page 2 and should include (a) the article's full title, (b) an abstract of no more than 300 words, and (c) up to 5 keywords or phrases that reflect the content and major thrust of the article. The abstract should give a succinct account of the objective, methods, results, and significance of the subject matter.

Introduction. This section begins on page 3 and should clearly state the objective of the research in the context of previous work bearing directly on the subject. An extensive review of the literature is not usually appropriate.

Citations in text. Customary abbreviations will be accepted and the authors are recommended to employ Systeme Internationale (SI/metric) units. Special and unusual symbols should be clearly identified, especially if handwritten. Spell out acronyms at first use, but use only acronyms thereafter. All equipment supplies and products stated in the article should have the manufacturer name and location identified at first mention.

Tables. Tables should be numbered consecutively with Arabic numerals and each should be typed double-spaced on a separate sheet. All tables are to be grouped together after the references. A short explanatory title and column headings should make the table intelligible without reference to the text. All tables must be cited and their approximate positions indicated in the text.

Figures and legends. The number of figures should be the minimum necessary to make the essential points of the paper. Figures should be supplied no larger than 8 × 10" (approx. 200 × 250 mm) and must be camera-ready. Photographs will be accepted only if the information cannot be presented easily in any other form. Explanation and keys should, as far as possible, be placed in the legends. Photographs for halftone reproduction must be on white glossy paper. Figures should be composed to occupy a single column (8.3 cm) or two columns (17 cm) after reduction. Diagrams and illustrations must have a professional appearance and be typed or drawn with sharp, black lettering to permit reduction. To assure legibility, letters, numbers, and symbols on figures should have a minimum height of 1 mm when reduced. Figures should be separate and not incorporated into the text copy.

Artwork should normally be in black and white; if authors have color figures, the publisher will provide a price quotation for the additional production costs. All figures must be identified on the back with the short title of the paper, figure number, and figure orientation (top or bottom). Preferably, figures should be mounted on heavy sheets of the same size as the manuscript. Four complete sets of figures should

be carefully packaged in protective envelopes, one to accompany each copy of the manuscript. Each figure must be cited and its approximate position clearly indicated within the text.

Figures must be numbered consecutively with Arabic numerals and be accompanied by a descriptive caption typed double-spaced on a separate sheet. The captions, collected at the end of the manuscript, should concisely describe the figure and identify any symbols and/or calibration bars.

References. Entries should be listed alphabetically by lead author at the end of the paper. All authors' names should be included, followed by the year of publication, the full title of the journal, volume, issue number, and inclusive page numbers. For books, the full title should be given, followed by the editors, volume number (if any), page numbers, publisher and place of publication. Citations in the text should read: Brown and Smith (1973), but (Brown & Smith, 1973). Where there are more than two authors the citation should read: Brown et al. (1973). The conventional Brown (1973a), Brown (1973b) should be used where more than one paper by the author(s) has appeared in the same year. Brief examples:

Journal or Magazine article
Schank, R.C. (1991). Where's the AI? *AI Magazine* 12(4), 38-49.
Segre, M.A. (1991). Learning how to plan. *Robotics and Autonomous Syst.* 8(1-2), 93-111.

Book
Dym, C.L. (1994). *Engineering design: A synthesis of views*. Cambridge University Press, New York.

Chapter in an edited book
Quinlan, J.R. (1983). Learning efficient classification procedures and their application to chess end games. In *Machine Learning: An Artificial Intelligence Approach*, (Carbonell, J.G., et al., Eds.), Vol. 1, pp. 463-482. Morgan Kaufmann, Los Altos, California.

Proceedings
Craw, S., & Sleeman, D. (1990). Automating the refinement of knowledge based systems. *Proc. Ninth Europ. AI Conf.*, 167-172.

Proceedings with publisher identified
Mittal, S., & Frayman, F. (1989). Towards a generic model of configuration tasks. *Proc. Eleventh Int. Joint Conf. Artificial Intelligence*, pp. 1395-1401. Morgan Kaufmann, Los Altos, California.

The alphabetical list of references begins a new page, and must be typed double-spaced. Each in-text citation must have a corresponding reference and vice versa. List works by different authors who are cited within the same parentheses in chronological order, beginning with the earlier work. Journal titles should not be abbreviated. Only published articles and articles in press should appear in this list. Responsibility for the accuracy of references cited lies with the authors.

Author biographies. Brief author biographies will be printed at the end of each paper; they should not exceed 100 words for each author.

COPYEDITING AND PAGE PROOFS

The publisher reserves the right to copyedit manuscripts to conform to the style of **AIEDAM**. The corresponding author will receive page proofs for final proofreading. No rewriting of the final accepted manuscript is permitted at the proof stage, and substantial changes may be charged to the authors.

OFFPRINTS

The corresponding author will receive 50 free article offprints. A form will accompany the page proofs allowing orders for complete copies of the issue and for the purchase of additional offprints. Offprint requirements of all coauthors should be included on this form. Orders received after issue printing will be subject to a 50% reprint surcharge.
