single-species ecosystems, 525–526
$\text{SiO}_2$
bulk, 135–136
in subduction zone, 291
SIP. See stable isotope probing
Siqueiros Fracture Zone, 245–246
Siqueiros melt inclusion, 246–247
Siqueiros Transform, 240–241
slab-derived fluids, in mantle, 134
slave cratons, 101
SLiMEs. See subsurface lithoautotrophic microbial ecosystems
small polar compounds, 496
small volcanic plumes, 198–201
smectite clays, 464–465
S/N ratio, of BSE, 16–18
snowballs, 346–347
soft-tissue pump, 279–280
Solar reservoir, 8–9
solidus
carbon and, 264
carbonate phase at, 135–136
of carbonated sediment, 135–136
curves, 136
Na-carbonate at, 137
of peridotite, 258
solubility
confined liquids and, 369–370
of DOC, 484
sorption, in sedimentary subsurface, 485–486
sound velocities
of Fe–C alloy, 50
in inner core, 50–51
South African Gold Mine Miscellaneous Euryarchaeal Group (SAGMEG), 534
Southwest Indian Ridge, 255–257
spin transition, 77–78
diagram, 78–79
spot measurements, 195–196
SRB. See sulfate-reducing bacteria
stability fields, in incipient melting, 165–166
stable isotope probing (SIP), 562–563
steady state
in elemental cycling, 315–319
transition to new, 321–322
