

AMERICAN ORNITHOLOGISTS' UNION MEMBERSHIP INVITATION

The American Ornithologists' Union is the oldest and largest organization in the New World devoted to the scientific study of birds. Although the A.O.U. is primarily a professional organization, its 4,000 members include many amateurs dedicated to the advancement of ornithology.

Publications Available Through Membership

The Auk, a quarterly journal published for more than 100 years, reports original scientific research. Supplements provide summaries of worldwide ornithological literature.

The bimonthly *Ornithological Newsletter* reports information about organizational activities, job opportunities, research granting agencies, requests for assistance with special projects, etc.

Additional Publications

Ornithological Monographs
Ten-year Indexes to *The Auk*
Back Issues for *The Auk* and *Ornithological Monographs*
Anatomical and Egg Inventory Series
Research and Membership Directories
Check-Lists (and updates) for North American Birds

Activities Supported by Membership

Annual Meetings, which include reports of scientific research, plenary lectures, films, workshops, exhibits, field trips, and social events
Ornithological Research
Graduate Student Travel to Annual Meetings
Annual Awards for Excellence in Research
Committee Projects on Conservation Issues

Membership Application

Regular Member, @ \$35.00	\$ _____	NAME _____
Life Member, @ \$1,050.00	\$ _____	ADDRESS _____
Life Installments, @ 4 annual payments of \$262.00	\$ _____	CITY _____ STATE (PROVINCE) _____
Student Member, @ \$18.00	\$ _____	ZIP CODE _____ COUNTRY _____
		TELEPHONE _____ HOME _____ WORK _____

Make check or money order (in U.S. dollars) payable to OSNA. All memberships are for a calendar year. Payments received after Sept 1 will begin membership the following year.

Write to OSNA for further information about library or institution subscriptions.

PHOTOCOPY THIS FORM AND SEND WITH DUES TO:

Der Ornithologische Beobachter

Did you know...

...that hunting on the Bassin of Ermatingen, a site of international importance for over 10,000 wintering waterfowl, reduced the populations of Mallards, Tufted Ducks and Pochards substantially, even if half the area was closed to hunting ?

...that Tree Pipits breeding in intensively farmed areas nest and forage almost exclusively in the remaining uncultivated plots, where the insect abundance is much higher ?

...that first records of the Black-winged Kite, Spectacled Warbler, Lesser Short-toed Lark and Pine Bunting have increased the Swiss avifauna to 365 species, and that the Bee-eater and the Ferruginous Duck have bred in Switzerland for the first time in 1991 ?

...that Swiss waters figure among the most important wintering sites for half a million waterfowl ?

...that 600-800 Snow Finches winter around the mountains Eiger, Mönch and Jungfrau, at altitudes of 1800-4000 m above sea level and that they roost in crevices in the cliffs providing optimal conditions during freezing cold nights ?

You do, if you read **Der Ornithologische Beobachter**, the scientific journal of **Ala**, the Swiss Society for Ornithology and Bird Protection.

It is issued four times a year, presenting original scientific papers on 350 pages per year, focusing on breeding ecology, migration, distribution and numbers, occurrence of new and rare bird species in Switzerland. All papers are in German, but the main contributions have extensive summaries and captions to figures and tables in English.

Subscription outside Switzerland is SFr. 45.-- per year. By becoming a Member of **Ala** you receive **Der Ornithologische Beobachter**, and you support the conservation activities of the Swiss Society for Ornithology and Bird Protection.

Invitation to subscribe

Subscription and Membership:
SFr. 45.-- outside Switzerland.

.... I apply for the **Ala** Membership to obtain **Der Ornithologische Beobachter**.

.... Please send me a copy of **Der Ornithologische Beobachter**.

Guidelines for Contributors

Bird Conservation International publishes papers and communications on subjects relevant to the conservation of birds, with a general preference for those addressing international or high national priorities. Submissions should be in duplicate, typewritten on one side of the paper only, and double-spaced, with positions of figures and tables indicated in the margin. Papers should be concise and factual, taking proper account of previous relevant literature; opinions expressed should be based on adequate evidence. Titles of papers must be accurate and concise, and (for the benefit of abstraction services) include any relevant scientific (taxonomic) name; a running head is needed (the editors will provide this if authors do not). *A full-length paper must include a proper summary.* The use of a word processor is strongly advised.

Whenever possible, authors should consult an issue of *BCI* for style and layout. Spelling generally follows *The shorter Oxford English dictionary*, supplemented by various standard references such as 'Topography' in *A dictionary of birds* (1985) and the most recent edition of *The Times atlas of the world*. Localities with well-known other spellings or older names should have these placed in parentheses after first mention, while localities too small to be in the *Times atlas* should be given their precise geographical coordinates (preferably with some evidence of source).

Modern authorities should be followed for both English and scientific names of birds, with explanations of any deviation. On first mention of a bird both English and scientific name should be given, thereafter only one, preferably the English. Scientific trinomials need be used only if subspecific nomenclature is relevant to the topic under discussion. These recommendations also apply for any other animal or plant species mentioned.

Metric units and their international symbols should be used (other systems of measurement can be added in parentheses), with temperatures in the Centigrade (Celsius) scale. Numbers one to nine are written in full except when linked with a measurement abbreviation or higher number, thus 'five birds' but '5 km' and '5–12 birds'; numerals are used for all numbers above ten, four-figure numbers and above using the comma thus: '1,234', '12,345'. Details of experimental technique, extensive tabulations of results, etc., are best presented as appendices. Dates should be written 1 January 1985, times of day as 08h30, 17h55 (24-hour clock), etc. When citing a conversation ('verbally') or letter ('*in litt.*'), the contact's name *and initials* should be included, preferably with the year of communication. Maps are best marked with a scale and north arrow, and drawn very neatly. Good photographs are also considered. Captions for figures and photographs should be typed on a separate sheet.

References in the text should not use ampersand or comma before the date, and should be chronologically listed, alphabetically if in the same year. Publications by the same authors in the same year may be distinguished by a, b, etc., after the date. Full references must be listed alphabetically at the end in conformity with the existing system of presentation (*which should be carefully checked before submission*). Name(s) and postal address(es) of author(s) should appear at the end of the article, in the format adopted.

Authors will receive proofs for checking which they are required to return within three days of receipt. Proofs of joint papers will automatically go to the senior author. Textual changes in proof cannot normally be countenanced. Twenty-five reprints will be made available irrespective of number of authors, and sent to the senior author.

Volume 2 Number 1 March 1992

CONTENTS

- Natural and man-induced evolutionary shifts in the birds of some Cuban cays 1
ORLANDO H. GARRIDO
- The distribution, abundance and habitat preferences of the Salmon-crested Cockatoo *Cacatua moluccensis* on Seram, Indonesia 7
STUART J. MARSDEN
- A review of the Santiago Purple Heron *Ardea purpurea bournei*, with a report of a new colony 15
C. J. HAZEVOET
- The White-breasted Guineafowl *Agelastes meleagrides* in Taï National Park, Côte d'Ivoire 25
I. S. FRANCIS, N. PENFORD, M. E. GARTSHORE AND A. JARAMILLO
- Conserving the endemic birds on the Comoro Islands, I: general considerations on survival prospects 61
MICHEL LOUETTE AND JAN STEVENS
- Conserving the endemic birds on the Comoro Islands, II: population fluctuations on Ngazidja 81
JAN STEVENS, MARC HERREMANS AND MICHEL LOUETTE
