

We wish to purchase runs and odd nos.of:Sphinx,Revue Mensuelle des Questions Recreatives.Bruxelles,1931-39.

Journal of Recreational Mathematics.1968-,Recreational Mathematics Magazine,1961-64.,Sphinx-Oedipe,Nancy,1906-1932.All books published in the series"Libraire du Sphinx" Bruxelles.Rouse-Ball,W.W.R.Mathematical Recreations and Essays.All editions from the first(1891) to 11th (1939). Also mathematical books of all kinds from very elementary to advanced texts.Also biographies of mathematicians and physicists.

We also sell books in this field,indeed we specialise in mathematics,and will be pleased to receive your list of books wanted and to send you our current catalogue on request.

The Mathematical Association

132 SHORT PROGRAMS for the Mathematics Classroom

CONTENTS

WITH NUMBERED LIST OF PROGRAMS

THE BASICS	1	5 STATISTICS AND PROBABILITY	115
ACKNOWLEDGEMENTS	4	60 Case showing	114
INTRODUCTION	5	92 In the long run	116
1 NUMBER	16	71 Exact heads	116
1 Triangle numbers	16	72 Proportions of heads	127
2 Fibonacci and the golden ratio	17	73 Dice	149
3 Factors	18	74 Die frequency table	120
4 Perfect numbers	18	75 Multiple dice	122
5 Highest common factor	19	76 Tree diagrams	122
6 Prime test	20	77 Sample mean, any uniform distribution	123
7 Prime numbers	20	78 Running total	123
8 Six covering decimals	21	79 Triangular numbers a sample mean	124
9 Fractions to the lowest terms	22	80 Loading dice methods	125
10 Number chains	23	81 The mean	126
11 Prithagorean triples	24	82 Mean of frequency distribution	126
12 The stamp problem	25	83 Standard deviation	126
2 SEQUENCES AND SERIES	27	84 PROCEDURE for sample mean and standard deviation	127
13 Terms of a sequence	27	85 PROCEDURE for grouping data	127
14 Sequence terms	28	86 Grouping input data unequal intervals	129
15 Sums of a series	30	87 Dice law chart	129
16 Series sum, with factorials	32	88 Histogram drawing PROCEDURE	130
17 Series sum, with binomial coefficients	34	89 Sampling from any probability distribution function	133
18 Sumner series	35	90 London product	135
19 Generating functions	37	91 Sample mean, central limit theorem	135
3 GEOMETRY	41	92 Correlation and regression	137
1 Very simple graph plotters	42	93 Binomial distribution	136
2 Simple graph plotters	43	94 Hypergeometric distribution	139
3 Graph plotters	44	95 Binomial expansion	140
4 Using graph plotters	47	96 Binomial samples - standard	140
25 Convolution graph plotters	51	97 Hypergeometric samples	141
26 Parametric equations	56	98 Binomial samples - standard	141
27 Location angles	57	99 Cigarette cards	142
28 Polar graph plotters	58	100 Waiting for a six	143
29 Linear programming	60	101 Random walk	144
30 Lines of Apollonius $AP = kPB$	62	102 The binomial cube method	145
31 Circle locus $SP = kSA$	64	103 Buffon's needle	147
32 Curves of pursuit (1)	65	104 Bridge hands	147
33 Curves of pursuit (2)	67	105 Lovelace bridge	150
34 Binomial expansion	70	106 Sampling comparison with histograms	154
35 Simple curve-attaching	73	6 CALCULUS	155
37 Falling ladder	74	107 Calculate a chord gradient	157
38 Curve-attaching	75	108 The limit of a chord gradient	157
39 Polar co-ordinates	77	109 The global derivative	158
40 Curves to polar	78	110 Drawing the gradient of a graph	159
41 Vector addition	79	111 Graph a sum	161
42 Vectors	80	112 Midline search for a root	161
43 Triangle construction	84	113 Lower search for a root	162
44 Area of a triangle	86	114 Series of convergence	163
45 Orthogonal projections	87	115 Solution by iteration	166
46 Oblique projections	89	116 Newton's approximations I	167
47 Perspective	91	117 Newton's approximations II	168
4 ALGEBRA	94	118 Recurrence sums	169
48 The one y	95	119 Drawing the area function	170
49 Volume of a cylinder A	97	120 The area function	172
50 Volume of a cylinder B	97	121 The regression rule	173
51 Maximum surface area	97	122 Simpson's rule	173
52 Class means and average	98	123 Differential equations: any solution	174
53 Conversion of units	99	124 Differential equations: imposed step input	176
54 Compound interest	100	125 Differential equations: function solution	177
55 How purchase is amortaged	100	7 MISCELLANY	179
56 Pascal 1	101	126 Coins and balls	179
57 Pascal 2	101	127 Coins and balls (sequence)	181
58 Pascal 3	102	128 Perpetual calendar (1)	183
59 Pascal 4	102	129 Perpetual calendar (2)	183
60 Functions table	104	130 Date of Easter	186
61 Locate a root by linear search	106	131 Moon	184
62 Simultaneous equations, two unknowns	107	132 $W=2$ in four colours	189
63 Simultaneous equations, three unknowns	108	REFERENCES	192
64 Algebraic identities	109	INDEX	193
65 Clark's multiple mean	109		
66 Congruence equations, MOD M	110		
67 Truth tables	111		
68 Matrix algebra	111		

The book of listings (over 288 pages) has versions for the BBC, RML and Spectrum micros together with suggestions of how to use the programs in the classroom. The book is spirally bound to stay open while in use on top of the computer.

All the 132 programs are available on ONE 40-track disc for the BBC micro. Also included is a program to enable you to collect more than 200 of your own programs on one disc.

* Now 80-Track BBC B, BBC *
 * MASTER & AMSTRAD 1512 *
 * versions available. *

Cheques and postal orders should be made payable to The Mathematical Association and sent to: Disc, THE MATHEMATICAL ASSOCIATION, 259 London Road, LEICESTER, LE2 3BE.

All prices quoted include postage & packing.

Book £5.95
 Disc £8.50
 Both £13.45

A copy of the disc with a licence to make copies within one Local Education Authority area £60.

THE MATHEMATICAL ASSOCIATION

The fundamental aim of the Mathematical Association is to promote good methods of mathematical teaching. A member receives each issue of the *Mathematical Gazette* and/or *Mathematics in School* (according to the class of membership chosen), together with any Newsletters and Reports published during the year. Intending members should ask the Executive Secretary for information and application forms.

The address of the Association and of the Honorary Treasurer and Secretaries is **259 London Road, Leicester LE2 3BE, Telephone (0533) 703 877.**

Change of address should be notified to the Membership Secretary at the Leicester office. If copies of the Association's periodicals fail to reach a member for lack of such notification, duplicate copies can be supplied only at the published price. If change of address is the result of a change of appointment, the Membership Secretary will be glad to be informed.

Subscriptions should be paid to the Hon. Treasurer.

Correspondence relating to the **Teaching Committee** should be addressed to Mr D. Bain, 23 Capstan Square, Stewart Street, London E14.

The **Library** is housed in the University Library, Leicester.

Correspondence relating to the **Teaching Committee** should be addressed to Mr D. Bain, 23 Capstan Square, Stewart Street, London E14.

THE MATHEMATICAL GAZETTE

Editor

Dr V. W. Bryant, Department of Pure Mathematics,
The Hicks Building, The University, Sheffield S3 7RH.

Assistant editors

Dr D. J. Baylis, Trent Polytechnic, Clifton Site, Nottingham NG11 8NS.
Mr G. Hoare, Dr Challoner's Grammar School, Amersham, Bucks HP6 5HA.

Material for publication should be sent to Dr Bryant.

Books for review should be sent to Dr Baylis.

Problems and solutions for the **Problem corner** should be sent to Mr Hoare.

Business and advertising correspondence should be addressed to the Executive Secretary at the Leicester office of the Association.

CONTENTS

Elections and swings	<i>Colin R. Fletcher</i>	1
Where is the camera?	<i>Colin Tripp</i>	8
An attack on the Erdos conjecture	<i>Nick MacKinnon and John Eastmond</i>	14
The birthday problem for boys and girls	<i>Tony Crilly and Shekhar Nandy</i>	19
Limits and real life	<i>M. Rycraft</i>	22
The distribution of l.s.d. and computer design 13, 14, 15: an investigation	<i>Peter R. Turner</i> <i>Geoffrey Wain and William Wynne Willson</i>	26 32
Notes 71.1–71.13		
Confusing quadratics	<i>Christopher Bradley</i>	37
The arithmetic-geometric mean	<i>J. A. Scott</i>	40
Circus triangles	<i>A. H. R. Grimsey and G. D. Entwisle</i>	41
A universal test for divisibility	<i>Oliver D. Anderson</i>	44
The $3 \times 3 \times 3$ magic cube	<i>George O'Sullivan</i>	46
An unreliable D -operator short-cut	<i>S. B. Edgar</i>	50
The shift theorem in differential equations	<i>A. J. B. Ward</i>	52
Introducing hyperbolic functions	<i>Hans Liebeck</i>	55
Collapsing a series with an additive	<i>Frank Chorlton</i>	56
Tree alignments in a regular plantation	<i>Paula M. J. Harris</i>	58
Venn diagrams using convex sets	<i>Mike Humphries</i>	59
Estimating the standard deviation	<i>J. F. Reynolds</i>	60
Why the mechanic kicked the car	<i>M. D. Stern</i>	62
Problem corner		64
Reviews		67
