If the blue one protected 4 times better, would you use it?

When a risk arises, it's not a question of if you should protect yourself but how to best protect yourself.

With costly central venous catheter-related infections occurring at a rate of 3% to 12%, and an associated mortality rate of 20%,¹ the risks are real.

ARROWgard Blue™² is your best defense against infection.

unprotected catheters.³ So you can save up to 80% of your CVC patients from the risk of a catheter-related bloodstream infection. And you can save your hospital from the expense of \$7,000 per infection.

To learn about all the benefits of ARROWgard Blue™ catheters, contact your Arrow representative or call 1 800 523-8446 or 610 378-0131.

CVC catheters with the built-in protection of ARROWgard Blue™ are up to 80% less likely to develop bacteremia than

The Journal of *Hospital Infection* publishes original articles in the field of hospital-acquired infection and related subjects. The Journal seeks to promote collaboration between the many disciplines in infection control in different countries.

RESEARCH AREAS INCLUDE

- Outbreaks of infection and their prevention
- Surveillance of hospital infection
- Methods of prevention of infection in medical and surgical patients
- Prevention of infection in immuno-suppressed patients
- Infection hazards related to medical devices
- Role of apparatus in hospital infection
- Management of hospital-infection programmes
- Theory and use of disinfectants
- Environmental surveillance and contamination
- Use of antibiotic prophylaxis to prevent infection
- Use of computers in surveillance of infection
- Public health
- Isolation systems
- Design of hospitals and related services
- Infection hazards of ITUs, SCBUs and other hospital departments.
