MCMC for a hyperbolic Bayesian inverse problem in traffic flow modelling – ADDENDUM

Jeremie Coullon and Yvo Pokern

DOI: 10.1017/dce.2022.3 Published online by Cambridge University Press: 22 February 2022.

The editors and publisher of *Data-Centric Engineering* have awarded the Open Data and Open Materials badges to this article Coullon, J., & Pokern, Y. (2022).

Open Data Badge—indicates that data necessary to reproduce the reported results is available in an open access repository, under an open licence, with an accompanying description of the data.

Open Materials Badge—indicates that any infrastructure, instruments, or equipment related to the reported methodology are available in an open access repository and are described in sufficient detail to allow a researcher to reproduce the procedure.

The original article has been updated to include the badges. Please refer to the Data Availability Statement to find the identifier linking to the open data or open materials.
