In Tom & Bragg (2019) the ordinate axis label of figure 5 was incorrect. The correct version of this figure is shown below.

FIGURE 5. (Colour online) DNS results for $\langle u'_z(\mathbf{x}^p(t), t) \rangle / u_\eta$ as a function of St , for $Fr = 0.052$, and for various filtering lengths ℓ_F/η . The circles correspond to $R_\lambda = 90$, the triangles to $R_\lambda \approx 230$ and the squares to $R_\lambda = 398$. The solid lines correspond to $\ell_F/\eta = \infty$, the dashed lines to $\ell_F/\eta = 125.6$, the dash-dot lines to $\ell_F/\eta = 31.4$, and the dotted lines to $\ell_F/\eta = 12.6$.
