# Marine Geophysical Researches

An International Journal for the Study of the Earth  
Beneath the Sea

## Editors

**Ken C. Macdonald**, *University of California, Santa Barbara, USA*; **R. C. Searle**, *University of Durham, Durham, UK*

The papers published in *Marine Geophysical Researches* emphasize the description and analysis of structures that can be investigated with geophysical methods only, and the study of the physical processes that led to the origin of these structures. Particular emphasis is given to papers on new techniques for imaging the sea floor, such as GLORIA, SeaMARC and Sea Beam. No sharp dividing line is drawn between marine geophysics, marine geochemistry and marine geology, and this broad interpretation means that many areas of marine geology and marine geochemistry are included in *Marine Geophysical Researches*, provided they are relevant to marine geophysics.

The journal publishes original research papers, research notes and preliminary papers, papers on instrumentation and methods, discussions and concise cruise reports.

Authors of state of the art review articles receive a free personal subscription for a period of three years to *Marine Geophysical Researches*.
