Public Health Nutrition

Volume 20, 2017 ISSN: 1368-9800

Eighteen issues per year

Aims and Scope

Public Health Nutrition provides an international forum for the publication and dissemination of research and scholarship in the form of peer-reviewed original papers and reviews, and for discussion in the form of editorials, commentaries, and correspondence, with a specific focus on nutrition-related public health.

The scope of *Public Health Nutrition* encompasses nutrition and nutrition policy at a population level, including work on assessment of nutritional status and nutritional environments, communication of nutrition-related information, implementation of programs and interventions, and sustainability of dietary patterns, food systems and supplies. We welcome papers that:

- Address assessment, monitoring, and surveillance of nutritional status or the quality of nutritional environments
- Describe the development and evaluation of methodology for assessment, monitoring, and surveillance in population-based samples
- Identify and analyse behavioural, social, cultural, environmental, economic, and political determinants of nutrition-related public health, and dietary and nutritional factors as determinants of health outcomes

- Build intelligence about the development, implementation, and evaluation of interventions and community nutrition programs and efforts
- Describe, discuss, debate and influence nutrition-related public policies
- Serve to build capacity for effective public health nutrition action, including workforce development and educational issues
- Develop perspectives and models to study diet and nutrition as related to the environment and sustainability.

We prefer papers that are innovative and contribute new knowledge to the literature. Papers should be succinct (ie, usually well under 5000 words not including the abstract, references, tables, figures and acknowledgements). Short communications (<2000 words) are welcome. We publish research, scholarship, and discussions that take a population and preventive approach. In addition to original contributions, ideas and suggestions for topics for debate are also welcome. We publish special issues.
