

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using \LaTeX . Authors who are able to do so are invited to prepare their manuscripts using \TeX . (We accept Plain \TeX , \LaTeX or \LaTeX .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Convolution of Riemannian manifolds and its applications	
Bang-Yen Chen	177
Rigid sets	
Luca Guerrini and Pier Luigi Papini	193
Topological sequence entropy and topologically weak mixing	
Simin Li	207
Steady vortex flows obtained from an inverse problem	
B. Emamizadeh and F. Bahrami	213
Characterisations of derivations on some operator algebras	
Wu Jing, Shijie Lu and Pengtong Li	227
Hitting probabilities of conditional Brownian motion and polarisation	
Dimitrios Betsakos	233
On Helly's principle for metric semigroup valued BV mappings of two real variables	
M. Balcerzak, S.A. Belov and V.V. Chistyakov	245
The weighted Turán type inequality for generalised Jacobi weights	
J.L. Wang and S.P. Zhou	259
An estimate for the total mean curvature in negatively curved spaces	
Albert Borbély	267
Quantities related to upper and lower semi-Fredholm type linear relations	
Teresa Alvarez, Ronald Cross and Diane Wilcox	275
Gramian analysis of multivariate frame multiresolution analyses	
Jae Kun Lim	291
Jacobi-like forms and power series bundles	
Min Ho Lee	301
A subdifferential characterisation of Banach spaces with the Radon-Nikodym property	
J.R. Giles	313
Optimality conditions for vector optimisation with set-valued maps	
Yong Wei Huang	317
On meromorphic solutions of certain nonlinear differential equations	
J. Heittokangas, R. Korhonen and I. Laine	331
Commuting of Toeplitz operators on the Bergman spaces of the bidisc	
Yufeng Lu	345
