PHONOLOGY AND READING DISABILITY

Solving the Reading Puzzle

As educators struggle to improve our nation's schools, they face the question of why so many children have difficulty learning to read. Most children learn to speak and understand language fairly easily. Why is the next hurdle—reading—so much more challenging, particularly to children with learning disabilities? The authors of *Phonology and Reading Disability* argue that an understanding of the internal phonological structures of words is crucial for those who

would learn to read. Reading is seen as a process of identifying not just individual sounds, but their relationship as well. For teachers, researchers, and clinicians interested in understanding the process of learning to read, this book is an essential resource. A volume in the International Academy for Research in Learning Disabilities Monograph Series.

APPLIED PSYCHOLINGUISTICS

INSTRUCTIONS TO AUTHORS

The Editors of *Applied Psycholinguistics* are Catherine E. Snow, Harvard Graduate School of Education, and John L. Locke, Massachusetts General Hospital. Authors should submit their original manuscript plus three copies to:

Applied Psycholinguistics, Editorial Office
Harvard Graduate School of Education
Larsen Hall, 7th Floor
Cambridge, MA 02138

Submissions may be full length articles (original research, theoretical or methodological studies, issue-oriented literature reviews), short notes, or critical responses to articles previously published in *Applied Psycholinguistics*.

Spelling, capitalization, and punctuation should be consistent within each article and should follow the style recommended in the Third Edition of the *Publication Manual of the American Psychological Association*. A title should be given for each article. An *auxiliary short title* should be given for any article whose title exceeds 50 characters. The *author's name* should be given in the form preferred for publication; the *affiliation* should include the author's full mailing address and telephone number. An *abstract* should be prepared for each article (limited to 120 words). Author's personal note(s) appear in the *acknowledgment* section. *Notes* should be numbered consecutively throughout the text and typed together on a separate page following the acknowledgment section. *Tables and figures* should be numbered consecutively throughout the article and appear as a unit following the reference section. *Bibliographic citations in the text* must include the author's last name and the date of publication and may include page references. Complete bibliographic information for each citation must be included in the list of references. Examples of correct styling for bibliographic citations are: Brown (1973), Ingram (1976, 54–55), Smith and Miller (1966), (Smith & Miller, 1966), (Peterson, Danner, & Flavell, 1972), and subsequently (Peterson et al., 1972). If more than one, citations should be listed in alphabetical order. *References* should be cited in the text and should be typed in alphabetical order using the following style:

Brown, R. (1973). Schizophrenia, language and reality. *American Psychologist*, 28, 395–403.

Ingram, D. (1976). *Phonological disability in children*. New York: Elsevier.

Krashen, S. D. (1978). Individual variation in the use of the Monitor. In W. C. Ritchie (Ed.), *Second language acquisition research*. New York: Academic.

Smith, F., & Miller, G. A. (Eds.). (1966). *The genesis of language*. Cambridge, Mass.: MIT Press.

Titles of journals should *not* be abbreviated. Unpublished citations should be listed in the references.

Preparation of the manuscript

The entire manuscript, including notes and references, should be typed double-spaced on 8½ by 11 inch or A4 paper, with margins set to accommodate approximately 70 characters per line and 25 lines per page. Manuscript pages should be numbered consecutively. Each element of the article should begin on a new page and should be arranged as follows: title page (title, short title, author's full name, affiliation, and mailing address), abstract, text, appendices, acknowledgments, notes, references, tables and figures.

Each table and figure should be submitted on a separate page and should be titled. Figures should be ready for photographic reproduction; they cannot be redrawn by the publisher. Charts, graphs, or other artwork should be drawn in black ink on white paper to occupy a standard area of 8½ by 11 or 8½ by 5½ inches before reduction. Photographs should be glossy black-and-white prints; 8 by 10 inch enlargements are preferred. All labels and details on figures should be clearly printed and large enough to remain legible after a 50% reduction. It is recommended that labels be done in transfer type of a sans-serif face such as Helvetica.

Copyediting and proofreading

The publisher reserves the right to copyedit and proofread all articles accepted for publication. The lead author will review the copyedited manuscript only if changes have been substantial. Page proof of an article will be sent to the lead author for correction of typographical errors only; authors must notify the editorial office of any changes within 48 hours or approval will be assumed.

The Third Edition of the *Publication Manual of the American Psychological Association* should be consulted for instructions on aspects of manuscript preparation and style not covered in these instructions. The Editor may find it necessary to return manuscripts for reworking and retyping that do not conform to requirements.

The lead author will receive 25 offprints of his or her article without charge; additional copies may be purchased if ordered at proof stage.

Submission of an article implies that it has not been published elsewhere. Authors are responsible for obtaining written permission to publish material (quotations, illustrations, etc.) for which they do not own the copyright. Contributors of accepted articles will be asked to assign their copyrights, on certain conditions, to Cambridge University Press.
