

INDEX OF SUBJECTS

- acesulfame, effect on caries 211
Actinomyces viscosus in dental plaque 205
activity, physical, effect on muscle 95–96, 106, 109, 111
adrenalin
 effect on glucose metabolism 72–73
 effect on proteolysis 73
ageing, effect on muscle protein turnover 83–84
alcohol, effect on mood 253
amino acids
 effect on insulin 76–77
 effect on muscle protein turnover 74–79
 large neutral *see* tryptophan
 tissue growth 96, 112–117
aminostatic appetite control 112–117
anabolic drive 80
 bone growth 100
 tissue growth 96, 99, 105, 111, 115–117
antidiuretic hormone, factors affecting release, pig 139–140
appetite
 aminostatic control 112–117
 control model 231–232
 factors affecting 225–242
 food and mood interactions 243–269
arginine, maintenance of gut integrity 51–52
ascorbic acid *see* vitamin C
aspartame, effect on caries 211
atherogenic lipoprotein phenotype 1–26

bacteria, translocation from gut 43–47
bag-theory of muscle growth regulation 108, 115, 117
balenine, metabolite of 3-methylhistidine 76
barrier function of gut mucosa 43–66
Basque Country *see* Spain
Belgium, intake of minerals and trace elements 273–275
binge eating *see* bulimia
blood
 effect on drinking, pig 138
 normal constituents, pig 143
blood pressure *see* hypertension
bone
 density, effects of vegetarian diet 190
 growth, effect of protein intake 96–105
 relation to muscle 99–109, 111, 115
buffaloes *see* ruminants
bulimia 258

cadmium, intake in European countries 275, 280, 282, 287–288, 292–294, 297
caffeine, effect on mood 251–256
calcium
 effect on caries 195, 200–201, 212
 calcium (*cont.*)
 intake, effect on appetite 113
 effect on bone growth 99–102
 European countries 273–279, 281–292, 296, 298
 calories, intake, effect of restriction on protein turnover 82–83
 cancer, effect of vegetarian diet 184–186
 carbohydrates
 balance and appetite 230–231
 craving 246, 259–260
 effect of consumption on glucose transport 29–32
 effect of consumption on mood 245–246, 259–260
 carbonic acid, effect on caries 212
 caries
 effect of corn starch sweeteners 209–210
 effect of dietary starch 207–210
 effect of dietary sugars 201–207
 effect of malnutrition 211–212
 effect of non-sugar sweeteners 211
 effect of oral retention of food 210
 protective factors in diet 197–201
 case-control studies in nutrition 171, 173
 casein, protection against caries 200
 cathepsins, effect of thyroid hormones 72
 cereals, effect on caries 207
 cheese, protection against caries 200
 chocolate
 effect on caries 201
 effect on mood 250–251, 262
 cholecystokinin, effect on mood 249
 cholesterol, blood, effects of vegetarian diet 187–188
 cholesteryl ester transfer protein 7–8, 10
 chromium, intake in European countries 282, 292–293, 296
 chylomicron remnants and heart disease 3–4, 7–8, 10
 citric acid, effect on caries 212
 cocoa factor, protection against caries 201
 coffee *see* caffeine
 cohort studies in nutrition 170, 172–173
 cola, effect on caries 212
 conception rate in ruminants, effect of rumen microbial protein 124–125
 connective tissue and muscle growth 104, 107–109, 116–117
 copper, intake in European countries 273–275, 277–279, 281–284, 288–289, 292–296
 corn starch sweeteners, effects on caries 209–210
 coronary heart disease *see* heart disease
 corticosteroids, effect on growth 99, 101
 corticosterone, effect of fasting 79
 cows *see* ruminants
 craving of foods 258–263
 cross-sectional studies in nutrition 171, 174

- dementia, effects of vegetarian diet 190
- Denmark, intake of minerals and trace elements 275–276
- dental health
 - effect of diet and nutrition 193–224
 - effect of tooth loss on diet 213–214
- dental plaque, effects of diet 195–215
- dental prostheses, effects on health 214
- depression
 - effect of carbohydrate consumption 246
 - effect of phenylalanine 245
 - effect of tryptophan 245–249
 - effect of tyrosine 245
- diabetes and caries 203
- diabetes and vegetarian diet 188
- diazoxide, effect on insulin secretion 78
- diet, measurement in epidemiological studies 165–178
- diating, effect on eating behaviour 257
- dopamine, appetite control 113
- drinking, factors affecting, pig 138–139
- drinks, effect on mood 254–256
- embryo survival, effect of protein nutrition in ruminants 125
- emotion *see* mood
- enamel slab studies *see* caries
- endotoxins, translocation from gut 45
- energy *see* calories
- energy balance and appetite 225–242
- epidemiology
 - dietary studies 165–178
 - health of vegetarians 179–192
- European Prospective Study into Cancer and Nutrition 190
- faeces, effect of water intake on excretion, pig 137–164
- fasting, effect on protein synthesis 77–78, 81
- fats, effect of consumption on mood 249
- fatty acids
 - heart disease 1–26
 - n*-3, maintenance of gut integrity 55–56
 - short chain, maintenance of gut integrity 53–55
- fertility, effect of protein nutrition in ruminants 128–129
- fetus, ruminant, effect of protein nutrition on growth 125
- fibre, effect on caries 195
- fibre, effect on gut barrier function 46
- flooding dose studies on amino acid metabolism 74–77
- fluoride, protection against caries 197–199
- folic acid, effect on caries 195–196
- foods
 - appetite and mood interactions 243–269
 - effects on caries 193–224
- foods *see* nutrients
- France, intake of minerals and trace elements 276–277
- free radicals, effect on caries 196
- fructose, effect on caries 205
- fuel balance *see* energy balance
- German vegetarian study 181, 188
- Germany, intake of minerals and trace elements 277–280
- gingivitis *see* periodontitis
- glucagon, effect on muscle protein 72
- glucocorticoids, effect on muscle protein turnover 72–74
- glucose
 - effect on caries 205
 - intestinal transport 27–41
 - protein sparing 76
- glucose polymers *see* corn starch sweeteners
- glucose syrups *see* corn starch sweeteners
- glutamine
 - effect on muscle protein turnover 77
 - maintenance of gut integrity 48–50
- goats *see* ruminants
- gravity, zero, effect on lean body mass 106
- Great Britain, intake of minerals and trace elements 280–285
- growth 93–117
 - catch-up 96–97, 102–103, 110, 112, 114–115
 - functional demands of tissues 95
 - genetic determination 94–95
- growth hormone
 - effect of ageing 84
 - effect on IGF-1 73–74
 - effect on muscle protein synthesis 71, 79, 81
- gut
 - maintenance of integrity 43–66
 - permeability 43–66
 - translocation of bacteria 43–66
- health food shop users, diet and health 181–188
- heart disease
 - effects of vegetarian diet 188–189
 - factors affecting 1–26
- Helicobacter pylori*, gut mucosal ulceration 45
- 5-hydroxytryptamine *see* serotonin
- hypertension, effects of vegetarian diet 186–187
- IGF-1
 - effect of dietary protein restriction 80–81
 - effect of fasting 83
 - effect on muscle protein turnover 70–71
 - interaction with insulin 73
- insulin
 - appetite control 96, 113
 - effect of dietary protein restriction 81
 - effect of fasting 83
 - effect on muscle protein turnover 69–71, 73–74, 76–77
 - effect on puberty in ruminants 127
 - interaction with IGF-1 73
- insulin resistance and heart disease 5–6, 10
- insulin-like growth factor, effect on growth 96, 99, 104
- insulin-like growth factor 1 *see* IGF-1
- iodine, intake in European countries 276–279, 282–284, 292, 296
- Ireland *see* Northern Ireland, Republic of Ireland
- iron, intake in European countries 275–279, 281–294, 296, 298

- isomalt, effect on caries 211
 Italy, intake of minerals and trace elements 286–287
- I-ketoisocaproate, effect on protein synthesis 75
- lactitol, effect on caries 211
 lactose, effect on caries 205
 lead, intake in European countries 275, 280, 282, 287–288, 292–294, 297
- lean body mass
 dietary effects 93–117
 regulation of food intake 109–117
- leucine, effect of infusion on protein synthesis 75
 limit dextrins *see* corn starch sweeteners
- lipaemia, postprandial 8–9
 lipases and heart disease 5, 7–9
- lipids
 balance and appetite 231–240
 dietary, effects on energy balance 227–228
 effect on muscle protein metabolism 83
- lipoproteins and heart disease 2–26
 luteinizing hormone and puberty in ruminants 127
- lycasin, effect on caries 211
- lysine
 effect on protein synthesis 81
 effect on water consumption, pig 157
 tissue growth 96–97
- magnesium, intake in European countries 273–279, 281–284, 288–292, 296, 298
- malic acid, effect on caries 212
- malnutrition, effect on caries 211–212
- maltose, effect on caries 205
- manganese, intake in European countries 273–275, 277, 281–282, 284, 294, 296
- mannitol, effect on caries 211
- manure *see* faeces
- meat, effects on health 179–192
- mercury, intake in European countries 275, 280, 282, 292, 294, 297
- 3-methylhistidine, myofibrillar protein breakdown 70, 75–76
- milk, protection against caries 199
- minerals, intake in European countries 271–302
- mood, appetite and food interactions 243–269
- mucosa, gut, glucose transporters 32
- multiple organ failure *see* barrier function, gut muscle
 effect of diet 93–120
 effect of stretch on growth 103–106, 115
 protein metabolism 67–91
 relation to bone 100–105, 115
 stability of mass 105–107
- myofibrillar proteins, catabolism 70, 75–76
- Netherlands, intake of minerals and trace elements 287–290
- neurotransmitters, appetite control 113
- nicotinic acid, effect on caries 195
- non-steroidal anti-inflammatory drugs, gut mucosal ulceration 45
- noradrenaline, appetite control 113
- Northern Ireland, intake of minerals and trace elements 285–286
- Norway, intake of minerals and trace elements 290–291
- nucleotides, maintenance of gut integrity 56–57
- nutrients, effect on protein synthesis 77
- nutrition
 effect on gut barrier function 46
- obesity
 appetite control 225–242
 carbohydrate craving 246
 effect of emotional stimuli 246, 256
 effect on lean body mass 111
- oestrous cycle of ruminants, effect of rumen microbial protein 123–124
- opioid peptides, effect on consumption of foods 251, 260
- ornithine, maintenance of gut integrity 52–53
- ovulation rate in ruminants, effect of rumen microbial protein 124
- Oxford vegetarian study 182, 187–189
- pantothenic acid, effect on caries 195
- periodontitis, effects of diet and nutrition 194–215
- phenylalanine
 appetite control 113
 effect on depression 249
 flooding dose, effect on protein synthesis 69–70
- phosphates, protection against caries 201
- phosphoric acid, effect on caries 212
- phosphorus
 intake in France 276–277
 protection against caries 200
- phytate, protection against caries 201
- pig
 water balance 137–164
 water requirement
 lactation 153–154
 reproduction 151–153
- plant foods, unrefined, protection against caries 200–201
- plaque *see* dental plaque
- plasma, extracellular volume, effect on drinking, pig 139–140
- polysomes, protein synthesis 68
- potassium, effect on water intake and excretion, pig 156–157
- premenstrual syndrome
 effect of carbohydrate consumption 246, 259
 effect of tryptophan 248
- progesterone, effect on embryo survival in ruminants 125
- proteasomes, proteolysis 69
- protein-stat, regulation of lean body mass 93–120
- protein balance and appetite 229–230
- protein, rumen microbial, effect on growth and reproduction 121–130
- proteins
 dietary
 growth control 93–120
 effect on water consumption, pig 157–159
 effect on ruminant reproduction 121–136

- proteins (*cont.*)
 effect of consumption on mood 245–249
 intake
 effect of deficit on muscle proteins 77–78
 effect of surplus on muscle proteins 78
 metabolism in muscle 67–91
 muscle, catalysis 68–69
 synthesis 68–69
 proteoglycan synthesis 98–99, 104
 puberty in ruminants, effect of protein nutrition 122–123, 127–128
- reproduction of ruminants, effect of protein nutrition 121–136
- Republic of Ireland, intake of minerals and trace elements 285
- riboflavin, effect on caries 195
- ruminants
 effect of dietary protein on reproduction 121–136
 glucose transporters 32
- saccharin, effect on caries 211
 saliva, protection against caries 202
 satiety and appetite 235–240
 seasonal affective disorder
 effect of carbohydrate consumption 246, 259
 effect of tryptophan 248
- selenium
 effect on caries 196–197
 intake in European countries 273, 277, 279, 282, 288–289, 292–293, 296
- serotonin
 appetite control 113–114
 effect of carbohydrate on protein consumption 245–249, 259
- Seventh-Day Adventists, diet and health 179–192
- sheep *see* ruminants
- smoking, effects on cancer mortality 182–184
- sodium, effect on water intake and excretion, pig 139–140, 142–144, 155–156
- sorbitol, effect on caries 211
- soya products, effects on caries 200
- Spain, intake of minerals and trace elements 291–294
- starch, dietary, effect on caries 207–210
Streptococcus mutans in dental plaque 201, 205, 210–211
- substrates, interactions with hormones 76–77
- sucrose, effect on caries 195, 201–207
- sugars
 effect on caries 201–207
 effect on intestinal glucose transport 32–36
see also carbohydrates, sweetness
- Sweden, intake of minerals and trace elements 295–297
- sweeteners, non-sugar, effects on caries 211
 sweetness, effect on mood 251
- Switzerland, intake of minerals and trace elements 295, 297–298
- Tarragona Province *see* Spain
- tartaric acid, effect on caries 212
- teeth *see* caries, dental health, dental prostheses
- thaumatin, effect on caries 211
- theobromine, effect on mood 250
- thyroid hormones
 effect on cathepsins 72
 effect on muscle protein turnover 72, 79
- tocopherol *see* vitamin E
- trace elements, intake in European countries 271–302
- tri-iodothyronine, effect of dietary protein restriction 80
- triacylglycerols and heart disease 3–26
- tryptophan
 appetite control 113–114
 effect of carbohydrate or protein consumption 245
 effect of deficiency on IGF-1 81
 effect of supplement on protein synthesis 81
 effects on mood and behaviour 245–249
 tissue growth 96–97
- tryptophan/large neutral amino acids, effect of ratio on appetite 230
- tyrosine
 appetite control 113
 effect on depression 249
 effect on onset of puberty in ruminants 127
- ubiquitin, proteolysis 68–70, 72, 78
- urine
 effect of water intake on excretion, pig 137–164
 normal values, pig 144
- Valencia *see* Spain
- validity of dietary studies 174–175
- vegetarians, effects of diet on health 179–192
- vitamin A, effect on caries 195
- vitamin C, effects on caries 196, 212
- vitamin D, effects on caries 195, 212
- vitamin E, effect on caries 196–197
- water
 absorption in gut, pig 138–139
 allowances, pig 147–154
 balance, physiological regulation, pig 138–142
 consumption, circadian rhythmicity, pig 146–147
 pig nutrition 137–164
- wortmannin, effect on muscle protein synthesis 71
- xylitol, effects on caries 211
- zinc
 effect of deficiency on appetite 111
 intake in European countries 273–279, 281–286, 288–289, 292–294, 296
 requirement during catch-up growth 103
