

## Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L<sup>A</sup>T<sub>E</sub>X class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

*Research Papers*

- 339 FRANÇOIS BACCELLI AND ANTONIO SODRE. Renewal processes, population dynamics, and unimodular trees
- 358 MAGDALENA SZYMKOWIAK. Measures of ageing tendency
- 384 CLAUDIO FONTANA, MARKUS PELGER AND ECKHARD PLATEN. On the existence of sure profits via flash strategies
- 398 YIMING JIANG, SHIYU SONG AND YONGJIN WANG. Some explicit results on one kind of sticky diffusion
- 416 ISTVÁN FAZEKAS, CSABA NOSZÁLY AND ATTILA PERECSENYI. The  $N$ -star network evolution model
- 441 BO LI, NHAT LINH VU AND XIAOWEN ZHOU. Exit problems for general draw-down times of spectrally negative Lévy processes
- 458 LASSE LESKELÄ AND HOA NGO. First passage percolation on sparse random graphs with boundary weights
- 472 MATIJA VIDMAR. First passage upwards for state-dependent-killed spectrally negative Lévy processes
- 496 BLANKA HORVATH, ANTOINE JACQUIER AND CHLOÉ LACOMBE. Asymptotic behaviour of randomised fractional volatility models
- 524 YOSHIAKI INOUE. Comparison results for M/G/1 queues with waiting and sojourn time deadlines
- 533 ZHISHUI HU, ZHENG LI AND QUNQIANG FENG. Accessibility percolation on random rooted labeled trees
- 546 STEFAN ANKIRCHNER, CHRISTOPHETTE BLANCHET-SCALLIET AND NABIL KAZI-TANI. The De Vylder–Goovaerts conjecture holds within the diffusion limit
- 558 C. HOUDRÉ AND G. KERCHEV. On the rate of convergence for the length of the longest common subsequences in hidden Markov models
- 574 LÁSZLÓ GYÖRFI, NORBERT HENZE AND HARRO WALK. The limit distribution of the maximum probability nearest-neighbor ball
- 590 ÁGNES BACKHAUSZ AND DÁVID KUNSZENTI-KOVÁCS. On the dense preferential attachment graph models and their graphon induced counterpart
- 602 DARYL J. DALEY AND MASAKIYO MIYAZAWA. A martingale view of Blackwell's renewal theorem and its extensions to a general counting process
- 624 EDDIE TU. On association and other forms of positive dependence for Feller processes
