Robotica aims to endow robotics with an authoritative, competent and dedicated journal to serve industry, research and education on a global scale. It provides an international forum for the multidisciplinary subject of robotics and help to encourage developments in this important field of automation. It covers the many aspects of robotics, including sensory perception, software (in the widest sense), particularly in regard to programming languages and links with master computers and CAD/CAM systems, control devices, the study of kinematics and dynamics involved in robot design, design of effectors and ancillary manipulators, problem solving, robot task planning, intelligibility of skilled motion, world model representation, development of relevant educational courses, training methods, analysis of managerial and social policy, economic and cost problems, applications of robots in the service industries (health, nuclear, security, cleaning, etc.), microrobots and items of theoretical and practical interest. As well as original papers, the journal publishes research notes, book reviews, conference reports and letters to the editor.

This journal is concerned with the interdisciplinary study of cybernetics and systems in the widest sense. Among the extensive range of topics covered are the following: *Artificial Intelligence, Automation, Cybernetic Modelling, Computer Simulation, Biocybernetics, Economic and Social Systems, Nature and Validation of General Systems, Ecosystems, Adaptive Systems, Philosophy of Cybernetics, the Interrelation between Cybernetics and other Sciences.*

Kybernetes, now in its twenty fifth year of publication, aims to endow cybernetics and general systems with an authoritative voice of its own and to establish a competent forum for the exchange of knowledge and information in relevant fields. One of the primary objectives of this publication is to weed out pseudo-cybernetics claims and to base cybernetics on a sound foundation; hence, highly speculative papers that lie on the fringe of cybernetics and systems sciences will not be published. The journal contains only *original papers*; it is the official publication of the World Organisation of General Systems and Cybernetics.
