# CAMBRIDGE Mathematics

## A Primer of Nonlinear Analysis

A. AMBROSETTI

This is an introduction to nonlinear functional analysis, in particular to those methods based on differential calculus in Banach spaces and is intended to accompany upper division courses for students of pure and applied mathematics and physics.

£25.00 net HB 0 521 37390 5 192 pp.

## Vortex Dynamics

P. G. SAFFMAN

The emphasis in this monograph is on the classical theory of inviscid incompressible fluids containing finite regions of vorticity. Including chapters on viscosity, compressibility, inhomogeneity and stratification, this book will be an invaluable guide for researchers in hypersonic flight to fluid mechanics.

£35.00 net HB 0 521 42058 X 336 pp.

*Cambridge Monographs on Mechanics and Applied Mathematics*

## Wave Asymptotics

Edited by P. A. MARTIN and G. R. WICKHAM

The papers collected here outline the development of fluid mechanics and asymptotics, and will be valuable reading to all who are interested in water waves and asymptotic techniques.

£22.95 HB 0 521 41414 8 250 pp.

## Large Eddy Simulation of Complex Engineering and Geophysical Flows

BORIS GALPERIN

Large eddy simulation (LES) is one of the most powerful computational tools available today for studying complex turbulent flows. Galperin provides a comprehensive review of LES – the history, state-of-the-art, and promising directions for future research.

£50.00 net HB 0 521 43009 7 550 pp.

## Bénard Cells and Taylor Vortices

E. L. KOSCHMIEDER

Describes the research done on the problems of Bénard convection, as well as its modern offspring the Rayleigh-Bénard problem, and Taylor vortices. Both problems are classical examples in the theory of hydrodynamic stability and share many features.

£35.00 net HB 0 521 40204 2 288 pp.

## Acta Numerica 1993

A. ISERLES

This year's *Acta Numerica* presents six invited papers on a broad range of topics from numerical analysis. Papers treat each topic at a level intelligible by any numerical analyst from graduate student to professional.

£22.95 net HB 0 521 44356 3 323 pp.

## Turbulence and Random Processes in Fluid Mechanics

Second Edition

M. T. LANDAHL and E. MOLLO-CHRISTENSEN

This timely update continues the original theme of the book, presenting the fundamental concepts and basic methods of fluid flow turbulence, enabling the reader to follow the literature and understand the current research.

£30.00 net HB 0 521 41992 1 170 pp.
£12.95 net PB 0 521 42213 2

## Topics in Fluid Mechanics

RENE CHEVRAY and JEAN MATHIEU

The authors have aimed for simplicity in presentation, stressing physical understanding over mathematical development. Specialized subjects such as chaotic advection, chaos and the onset of turbulence are given particular attention.

£65.00 net HB 0 521 41082 7 384 pp.
£27.95 net PB 0 521 42272 8

## Lectures on Ergodic Theory and Pesin Theory on Compact Manifolds

MARK POLLICOTT

Pesin theory consists of the study of the theory of nonuniformly hyperbolic diffeomorphisms. The author provides us with a straightforward account of this theory, following the approaches of Katok and Newhouse.

£19.95 net PB 0 521 43593 5 180 pp.

## The Quantum Theory of Motion

PETER HOLLAND

This is the first comprehensive exposition of the interpretation of quantum mechanics pioneered by Louis de Broglie and David Bohm. Written in a clear and concise manner this book will appeal to all physicists with an interest in the foundations of their subject.

£70.00 net HB 0 521 35404 8 624 pp.

## INSTRUCTIONS TO AUTHORS

*Submission of manuscripts* Papers may be submitted to any member of the editorial board. Three copies should be sent; originals of figures should *not* be included until the paper has been accepted. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Papers may be submitted electronically by sending a LaTeX file to EJAM@VAX.OX.AC.UK; this file should include the figures (line figures only). Electronic communications can also be used for minor corrections and for messages to the editors.

*Layout of manuscripts* Papers should be typewritten **in double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers must begin with an abstract of not more than 300 words, and they should end with a brief concluding section. The SI system of units must be used throughout. There is no formal restriction on length, but the constraint of fitting an integral number of papers into 96 pages means that short papers (20 typed pages or fewer) are likely to appear sooner than the long ones.

*Illustrations* Figures should be drawn in indian ink on good quality white paper or produced by computer to comparable quality. Wherever possible they will be reproduced *with* the author's lettering. A list of captions for figures should be attached separately.

Where appropriate, articles may be illustrated by photographs: high-quality glossy black and white prints are necessary.

*References* References should be listed in alphabetical order at the end of the main text. Please include the article title in the reference, which should be in the order: author's surname, initials; year in parentheses; article title; journal name, abbreviated in accordance with the *World List of Scientific Periodicals* (4th Edn); volume number (underlined); inclusive page numbers.

*Citations in the text* Any unambiguous system is acceptable. Three recommended ways of citing a 1992 paper by A. European are: European (1992); European [Eu]; European [7]. In the second case, the reference at the end of the text should be preceded by [Eu], and in the third by [7]. Please note that in the third system, alterations may lead to wholesale renumbering.

## EDITORIAL POLICY

The **European Journal of Applied Mathematics** aims to publish papers in all areas of applied mathematics, with especial emphasis on the following.

**(i) The exposition of new mathematical ideas relevant to the modelling and analysis of modern technological processes.**

**(ii) The development of interesting mathematical methods with broad areas of applicability.**

There is no restriction in the areas of applicability or the style of mathematics as long as the content is presented so as to be as accessible as possible to the entire community of mathematicians and mathematical scientists. This applies in particular to the introductory section of the paper. Standard mathematical techniques will only be published if they are associated with novel applications or lead to substantial advances in established problem areas.

## COPYING

This journal is registered with the Copyright Clearance Center, 27 Congress Street, Salem, MA 01970. Organisations in the USA who are also registered with the C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per-copy fee of $5.00. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0956-7925/93 $5.00 + .00

Organisations authorised by the Copyright Licensing Agency may also copy material subject to the usual conditions.

*ISI Tear Sheet Service*, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorised to supply single copies of separate articles for private use only.

*For all other use*, permission should be sought from the Cambridge or the American Branch of Cambridge University Press.
