Ergod. Th. & Dynam. Sys. (2011), **31**, 1273–1276 © *Cambridge University Press, 2011*

Papers to appear in forthcoming issues

Aliste-Prieto, J. and Coronel, D.	Tower systems for linearly repetitive Delone sets
Barański, K., Karpińska, B. and Zdunik, A.	Bowen's formula for meromorphic functions
Bárány, B.	Dimension of the generalized 4-corner set and its projections
Barge, M. and Martensen, B. F.	Classification of expansive attractors on surfaces
Bekka, B. and Heu, J.-R.	Random products of automorphisms of Heisenberg nilmanifolds and Weil's representation
Berger, P.	Structural stability of attractor–repellor endomorphisms with singularities
Biswas, K.	Simultaneous linearization of germs of commuting holomorphic diffeomorphisms
Bounemoura, A.	Generic super-exponential stability of invariant tori in Hamiltonian systems
Bousch, T.	La distance de réarrangement, duale de la fonctionnelle de Bowen
Bowen, L.	Sofic entropy and amenable groups
Brownlowe, N., an Huef, A., Laca, M. and Raeburn, I.	Boundary quotients of the Toeplitz algebra of the affine semigroup over the natural numbers
Bundfuss, S., Krüger, T. and Troubetzkoy, S.	Topological and symbolic dynamics for hyperbolic systems with holes
Burger, M. and Iozzi, A.	Bounded cohomology and totally real subspaces in complex hyperbolic geometry
Buzzi, J., Fisher, T., Sambarino, M. and Vásquez, C.	Maximal entropy measures for certain partially hyperbolic, derived from Anosov systems
Carlsen, T. M. and Thomsen, K.	The structure of the C^*-algebra of a locally injective surjection
Carminati, C. and Tiozzo, G.	A canonical thickening of $\mathbb{Q}$ and the entropy of α-continued fraction transformations
Carvalho, A. N. and Cholewa, J. W.	Exponential global attractors for semigroups in metric spaces with applications to differential equations
Ceccherini-Silberstein, T. and Coornaert, M.	A Garden of Eden theorem for linear subshifts
Chaika, J.	There exists a topologically mixing interval exchange transformation
Chu, Q. and Frantzikinakis, N.	Pointwise convergence for cubic and polynomial multiple ergodic averages of non-commuting transformations
Cortez, M. I. and Rivera-Letelier, J.	Topological orbit equivalence classes and numeration scales of logistic maps
Danilenko, A. I.	New spectral multiplicities for mixing transformations

https://doi.org/10.1017/S0143385711000502 Published online by Cambridge University Press

de Melo, W., Salomão, P. A. S. and Vargas, E.	A full family of multimodal maps on the circle
Deaconu, V., Kumjian, A. and Quigg, J.	Group actions on topological graphs
Demers, M. F., Wright, P. and Young, L.-S.	Entropy, Lyapunov exponents and escape rates in open systems
Dolgopyat, D., Freidlin, M. and Koralov, L.	Deterministic and stochastic perturbations of area preserving flows on a two-dimensional torus
Dooley, A. H. and Hagihara, R.	Computing the critical dimensions of Bratteli–Vershik systems with multiple edges
Dooley, A. H. and Rudolph, D. J.	Non-uniqueness in G-measures
Dooley, A. H. and Zhang, G.	Co-induction in dynamical systems
Downarowicz, T. and Serafin, J.	A short proof of the Ornstein theorem
Fan, S., Liu, Q.-H. and Wen Z.-Y.	Gibbs-like measure for spectrum of a class of quasi-crystals
Fang, Y.	Invariant rigid geometric structures and expanding maps
Fang, C., Huang, W., Yi, Y. and Zhang, P.	Dimensions of stable sets and scrambled sets in positive finite entropy systems
Farina, A. and Valdinoci, E.	Some results on minimizers and stable solutions of a variational problem
Ferguson, A. and Pollicott, M.	Escape rates for Gibbs measures
Fried, D.	Ideal tilings and symbolic dynamics for negatively curved surfaces
Glasner, E. and Weiss, B.	On Hilbert dynamical systems
Guivarc'h, Y. and Raja, C. R. E.	Recurrence and ergodicity of random walks on linear groups and on homogeneous spaces
Gupta, C., Holland, M. and Nicol, M.	Extreme value theory and return time statistics for dispersing billiard maps and flows, Lozi maps and Lorenz-like maps
Hazard, P. E.	Hénon-like maps with arbitrary stationary combinatorics
Hochman, M.	On notions of determinism in topological dynamics
Hua, Q.	Continuity of packing measure function of self-similar iterated function systems
Jiang, M.	Differentiating potential functions of SRB measures on hyperbolic attractors
Kadyrov, S.	Positive entropy invariant measures on the space of lattices with escape of mass
Kalikow, S.	Infinite partitions and Rokhlin towers
Kalikow, S.	Non-intersecting splitting σ-algebras in a non-Bernoulli transformation
Kaloshin, V. and Kozlovski, O. S.	A C^r unimodal map with an arbitrary fast growth of the number of periodic points
Kamae, T.	Uniform sets and super-stationary sets over general alphabets
Kamae, T. and Salimov, P. V.	On maximal pattern complexity of some automatic words
Katok, S. and Ugarcovici, I.	Applications of (a, b)-continued fraction transformations
Kesseböhmer, M., Munday, S. and Stratmann, B. O.	Strong renewal theorems and Lyapunov spectra for α-Farey and α-Lüroth systems

https://doi.org/10.1017/S0143385711000502 Published online by Cambridge University Press

Kosloff, Z.	On a type III_1 Bernoulli shift
Kułaga, J.	On the self-similarity problem for smooth flows on orientable surfaces
Kunze, M. and Ortega, R.	Complete orbits for twist maps on the plane: the case of small twist
Kwapisz, J.	Rigidity and mapping class group for abstract tiling spaces
Le Roux, F.	There is no minimal action of $\mathbb{Z}^2$ on the plane
Li, Y., Chen, E. and Cheng, W.-C.	Tail pressure and the tail entropy function
Lim, S. and Oh, H.	On the distribution of orbits of geometrically finite hyperbolic groups on the boundary
Lima, Y.	$\mathbb{Z}^d$-actions with prescribed topological and ergodic properties
Lindenstrauss, E. and Shapira, U.	Homogeneous orbit closures and applications
López-Hernanz, L.	Summable formal invariant curves of diffeomorphisms
Maderna, E.	On weak KAM theory for N-body problems
Matheron, É.	Subsemigroups of transitive semigroups
Mauduit, C. and Moreira, C. G.	Generalized Hausdorff dimensions of sets of real numbers with zero entropy expansion
Melbourne, I., Niţică, V. and Török, A.	Transitivity of Heisenberg group extensions of hyperbolic systems
Melbourne, I. and Török, A.	Convergence of moments for Axiom A and non-uniformly hyperbolic flows
Mihailescu, E.	On a class of stable conditional measures
Mihaljević-Brandt, H.	Dynamical approximation and kernels of non-escaping-hyperbolic components
Mohammadi, A.	A special case of effective equidistribution with explicit constants
Mora, L. and Ruiz, B.	Diffeomorphisms with infinitely many irrational invariant curves
Moss, A. and Walkden, C. P.	Stable topological transitivity properties of $\mathbb{R}^n$-extensions of hyperbolic transformations
Peng, W., Yin, Y. and Zhai, Y.	Density of hyperbolicity for rational maps with Cantor Julia sets
Petersen, K.	An adic dynamical system related to the Delannoy numbers
Peterson, J. and Sinclair, T.	On cocycle superrigidity for Gaussian actions
Polo, F.	Equidistribution of singular measures on nilmanifolds and skew products
Reeve, H. W. J.	The packing spectrum for Birkhoff averages on a self-affine repeller
Rørdam, M. and Sierakowski, A.	Purely infinite C^*-algebras arising from crossed products
Rousseau, J.	Recurrence rates for observations of flows
Sadun, L.	Exact regularity and the cohomology of tiling spaces
Schneider, M.	Alexandrov embedded closed magnetic geodesics on S^2
Schweitzer, S. J. P. A.	Normal subgroups of diffeomorphism and homeomorphism groups of R^n and other open manifolds

https://doi.org/10.1017/S0143385711000502 Published online by Cambridge University Press

Stoyanov, L.	Non-integrability of open billiard flows and Dolgopyat type estimates
Szarek, T. and Worm D. T. H.	Ergodic measures of Markov semigroups with the e-property
Tapie, S.	A variation formula for the topological entropy of convex-cocompact manifolds
Tokman, C. G., Hunt, B. R. and Wright, P.	Approximating invariant densities of metastable systems
Wang, Z.	Rigidity of commutative non-hyperbolic actions by toral automorphisms
Yang, J.	Newhouse phenomenon and homoclinic classes
Yarmola, T.	An example of a pathological random perturbation of the Cat Map
Yayama, Y.	Existence of a measurable saturated compensation function between subshifts and its applications
Yildiz, I. B.	Discontinuity of topological entropy for Lozi maps
Yoo, J.	Measures of maximal relative entropy with full support
Yu, B.	The templates of non-singular Smale flows on three manifolds

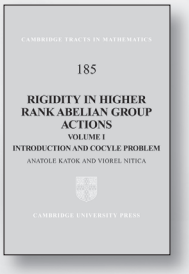
CAMBRIDGE

Great Titles *from* Cambridge University Press!

Rigidity in Higher Rank Abelian Group Actions
Volume 1: Introduction and Cocycle Problem
ANATOLE KATOK *and* VIOREL NITICA
Cambridge Tracts in Mathematics

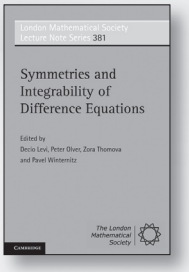
CONTENTS: Introduction: an overview; Part I. Preliminaries from Dynamics and Analysis: 1. Properties of abelian group actions; 2. Principal classes of algebraic actions; 3. Preparatory results from analysis; Part II. Cocycles, Cohomology and Rigidity: 4. First cohomology and rigidity for vector-valued cocycles; 5. Cocycles with non-abelian range; 6. Higher order cohomology; Bibliography; Index.
$85.00: Hardback: 978-0-521-87909-5: 320 pp.



New in Paperback!

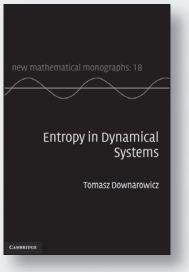
Symmetries and Integrability of Difference Equations
Edited by DECIO LEVI, PETER OLVER, ZORA THOMOVA, *and* PAVEL WINTERNITZ

CONTRIBUTORS: V. Dorodnitsyn, R. Kozlov, B. Grammaticos, A. Ramani, J. Hietarinta, M. E. H. Ismail, A. Its, D. Levi, R. I. Yamilov, S. P. Novikov, P. J. Olver, J. Patera, Yu. B. Suris, P. Winternitz
London Mathematical Society Lecture Note Series
$65.00: Paperback: 978-0-521-13658-7: 352 pp.



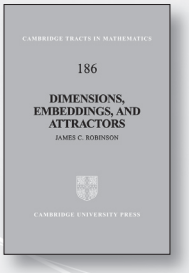
Entropy in Dynamical Systems
TOMASZ DOWNAROWICZ
New Mathematical Monographs

A comprehensive course on entropy in dynamical systems ideal for graduate students learning the subject from scratch.
$90.00: Hardback: 978-0-521-88885-1: 408 pp.



Dimensions, Embeddings, and Attractors
JAMES C. ROBINSON
Cambridge Tracts in Mathematics

Accessible monograph exploring what it means for a set to be 'finite-dimensional' and applying the abstract theory to attractors.
$65.00: Hardback: 978-0-521-89805-8: 218 pp.



Prices subject to change.

CAMBRIDGE JOURNALS

Journal of Fluid Mechanics

Editor
M. G. Worster, University of Cambridge, UK

Journal of Fluid Mechanics is the leading international journal in the field and is essential reading for all those concerned with developments in fluid mechanics. It publishes authoritative articles covering theoretical, computational and experimental investigations of all aspects of the mechanics of fluids. Each issue contains papers on both the fundamental aspects of fluid mechanics, and their applications to other fields such as aeronautics, astrophysics, physiology, chemical and mechanical engineering, hydraulics, meteorology, oceanography, geology, acoustics and combustion.

Journal of Fluid Mechanics

INSTRUCTIONS FOR CONTRIBUTORS

Editorial Policy

The journal welcomes high quality contributions on topics closely related to dynamical systems and ergodic theory. Submissions in the field of differential geometry, number theory, operator algebra, differential, topological, symbolic, measurable dynamics and celestial and statistical mechanics are especially welcome. Expository survey papers and reviews of relevant books will be published from time to time.

Submission of manuscripts

Manuscripts should be submitted to an executive or managing editor whose interest is closest to the material of their article. In case of doubt authors may send manuscripts to the Managing Editors at the University of Warwick. Manuscripts may be submitted electronically in pdf or ps form as an attachment to an email, i.e. not in the body of an email. Please also send the TEX file. If you are unable to do this, please submit the manuscript in printed form. The editor in charge of the paper will acknowledge receipt of the paper. **It is important that authors inform the editor of any changes of postal and/or e-mail address while their paper is under consideration**.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

The journal strongly recommends submission of accepted papers in LATEX using the ETDS LATEX class file. Papers that use this class file will be processed more efficiently. A LATEX2e file etds.cls is available via anonymous ftp from the Cambridge University Press site at ftp.cup.cam.ac.uk in the directory /pub/texarchive/journals/latex/etds-cls/. In case of difficulties with these files, please contact etds@sunrise-setting.co.uk or the Journal editorial office at etds@maths.warwick.ac.uk. Alternatively, authors may use 'article' style.

On final acceptance of a paper, authors should send the LATEX source code via e-mail including the figures (line figures only) and all author-defined macro and style files, to the Managing Editors, together with a pdf produced using the same file. The publisher reserves the right to typeset any article by conventional means if the author's TEX code presents problems in production.

Manuscript

Papers should be typed, double-spaced, with generous margins. The pages must be numbered.

The first page should give the title, the author's name and institution, and a short abstract intelligible to mathematicians.

The title, while brief, must be informative (e.g. 'A new proof of the ergodic theorem', whereas 'Some applications of a theorem of Birkhoff' would be useless).

Notation

Avoid abbreviations such as Thm, Prop., Eq., iff. In the text do not use symbols $\forall$, $\exists$, $\Rightarrow$ and $\Leftrightarrow$. Fractions are generally best expressed by a solidus. Complicated exponents like $\exp\{z^2 \sin\theta/(1+y^2)\}$ should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.

If an author wishes to mark the end of the proof of a theorem, the sign $\square$ may be used.

Footnotes should be avoided.

Figures

Graphics should be prepared to professional standards, preferably using Postscript or LATEX drawing facilities. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the manuscript. Figures should be used sparingly and only when they greatly clarify the exposition. The preferred resolutions for submission of electronic artwork are: halftone images 300 dpi; line tone 600 dpi; bitmap 1200 dpi.

Tables

Tables should be numbered (above the table) as Table 1, Table 2, ... Indicate the position of each in the text as for figures.

References

References should be collected at the end of the paper numbered in alphabetical order of the author's names or by order of citation. Include in the list of references only those works that are cited. For the style of references please consult recent issues of the journal. A reference to a book should give the title, in italics, and then in roman type the publisher's name and the place and year of publication:

[4] N. Dunford and J. T. Schwartz. *Linear Operators*. Part I. Wiley, New York, 1958.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Journal titles should be abbreviated as in *Mathematical Reviews*:

[6] J. E. Littlewood. The 'pits effect' for functions in the unit circle. *J. Analyse Math.* **23** (1970), 236–268.

Proofs

Authors receive one pdf proof for correction. Typographical and minor corrections only are permitted at this stage. For papers with more than one author the proofs are sent to the first named author unless the editor receives other instructions. It is important that proofs are corrected and returned promptly.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see www.fsc.org for information.

Ergodic theory and dynamical systems

VOLUME 31 PART 4 AUGUST 2011

CONTENTS

Bonatti, C. Towards a global view of dynamical systems, for the C^1-topology (Survey) 959

Antonevich, A. B., Bakhtin, V. I. and Lebedev, A. V. On t-entropy and variational principle for the spectral radii of transfer and weighted shift operators 995

Araújo, V. and Bufetov, A. I. A large deviations bound for the Teichmüller flow on the moduli space of abelian differentials 1043

Barnsley, M. F. and Vince, A. The chaos game on a general iterated function system 1073

Bartoszek, W. and Erkurşun, N. On quasi-compact Markov nets 1081

Broderick, R., Fishman, L. and Kleinbock, D. Schmidt's game, fractals, and orbits of toral endomorphisms 1095

Chazottes, J.-R., Gambaudo, J.-M. and Ugalde, E. Zero-temperature limit of one-dimensional Gibbs states via renormalization: the case of locally constant potentials 1109

Climenhaga, V. Bowen's equation in the non-uniform setting 1163

Eynard, H. A connectedness result for commuting diffeomorphisms of the interval 1183

Gaidashev, D. and Koch, H. Period doubling in area-preserving maps: an associated one-dimensional problem 1193

Ledrappier, F. and Xie, J.-S. Vanishing transverse entropy in smooth ergodic theory 1229

Pelayo, A. and Tolman, S. Fixed points of symplectic periodic flows 1237

Sander, E. and Yorke, J. A. Period-doubling cascades galore 1249

de la Llave, R. and Windsor, A. Avoiding early closing: 'Livšic theorems for non-commutative groups including diffeomorphism groups and results on the existence of conformal structures for Anosov systems' – CORRIGENDUM 1269

Papers to appear in forthcoming issues 1273
