Inverse Problems and Applications

Inside Out II

Edited by Gunther Uhlmann

Mathematical Sciences Research Institute Publications

The expository survey essays in this book describe recent developments in inverse problems and imaging, including hybrid or couple-physics methods arising in medical imaging, Calderon's problem and electrical impedance tomography, inverse problems arising in global seismology and oil exploration, inverse spectral problems, and the study of asymptotically hyperbolic spaces. It is suitable for graduate students and researchers interested in inverse problems and their applications.

\$110.00: Hardback: 978-1-107-03201-9: 592 pp.

Mathematical Aspects of Fluid Mechanics

Edited by James C. Robinson, José L. Rodrigo, and Witold Sadowski

London Mathematical Society Lecture Note Series

A selection of surveys and original research papers in mathematical fluid mechanics arising from a 2010 workshop held in Warwick.

\$65.00: Paperback: 978-1-107-60925-9: 271 pp.

Partial Differential Equation Analysis in Biomedical Engineering

Case Studies with Matlab

William E. Schiesser

Gives graduate students and researchers an introductory overview of partial differential equation analysis of biomedical engineering systems through detailed examples.

\$105.00: Hardback: 978-1-107-02280-5: 430 pp.

Spectral Theory and its Applications

Bernard Helffer

Cambridge Studies in Advanced Mathematics

Introduces the basic tools in spectral analysis using numerous examples from the Schrödinger operator theory and various branches of physics.

\$65.00: Hardback: 978-1-107-03230-9: 264 pp.

Prices subject to change.

CAMBRIDGE
UNIVERSITY PRESS

INSTRUCTIONS FOR CONTRIBUTORS

Editorial Policy

The journal welcomes high quality contributions on topics closely related to dynamical systems and ergodic theory. Submissions in the field of differential geometry, number theory, operator algebra, differential, topological, symbolic, measurable dynamics and celestial and statistical mechanics are especially welcome. Expository survey papers and reviews of relevant books will be published from time to time.

Submission of manuscripts

Manuscripts should be submitted via the website: <http://mc.manuscriptcentral.com/etds>.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

The journal strongly recommends submission of accepted papers in L^AT_EX using the ETDS L^AT_EX class file. Papers that use this class file will be processed more efficiently. A L^AT_EX2e file `etds.cls` is available via anonymous ftp from the Cambridge University Press site at <ftp.cup.cam.ac.uk> in the directory `/pub/texarchive/journals/latex/etds-cls/`. In case of difficulties with these files, please contact etds@sunrise-setting.co.uk or the Journal editorial office at etds@maths.warwick.ac.uk. Alternatively, authors may use 'article' style.

On acceptance of a paper, authors should upload the L^AT_EX source code including the figures (line figures only) and all author-defined macro and style files, together with a pdf produced using the same file, via the submission site <http://mc.manuscriptcentral.com/etds>.

The publisher reserves the right to typeset any article by conventional means if the author's T_EX code presents problems in production.

Manuscript

Papers should be typed with generous margins. The pages must be numbered.

The first page should give the title, the author's name and institution, and a short abstract intelligible to mathematicians.

The title, while brief, must be informative (e.g. 'A new proof of the ergodic theorem', whereas 'Some applications of a theorem of Birkhoff' would be useless).

Notation

Avoid abbreviations such as Thm, Prop., Eq., iff. In the text do not use symbols \forall , \exists , \Rightarrow and \Leftrightarrow . Fractions are generally best expressed by a solidus. Complicated exponents like $\exp\{z^2 \sin \theta / (1 + y^2)\}$ should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.
If an author wishes to mark the end of the proof of a theorem, the sign \square may be used.

Footnotes should be avoided.

Figures

Graphics should be prepared to professional standards, preferably using Postscript or L^AT_EX drawing facilities. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the manuscript. Figures should be used sparingly and only when they greatly clarify the exposition. The preferred resolutions for submission of electronic artwork are: halftone images 300 dpi; line tone 600 dpi; bitmap 1200 dpi.

Tables

Tables should be numbered (above the table) as Table 1, Table 2, Indicate the position of each in the text as for figures.

References

References should be collected at the end of the paper numbered in alphabetical order of the author's names or by order of citation. Include in the list of references only those works that are cited. For the style of references please consult recent issues of the journal. A reference to a book should give the title, in italics, and then in roman type the publisher's name and the place and year of publication:

[4] N. Dunford and J. T. Schwartz. *Linear Operators*. Part I. Wiley, New York, 1958.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Journal titles should be abbreviated as in *Mathematical Reviews*:

[6] J. E. Littlewood. The 'pits effect' for functions in the unit circle. *J. Analyse Math.* **23** (1970), 236–268.

Proofs

Authors receive one pdf proof for correction. Typographical and minor corrections only are permitted at this stage. For papers with more than one author the proofs are sent to the first named author unless the editor receives other instructions. It is important that proofs are corrected and returned promptly.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see www.fsc.org for information.

Ergodic theory and dynamical systems

VOLUME 33 PART 2 APRIL 2013

CONTENTS

<i>Abért, M. and Weiss, B.</i> Bernoulli actions are weakly contained in any free action	323
<i>Conley, C. T., Kechris, A. S. and Tucker-Drob, R. D.</i> Ultraproducts of measure preserving actions and graph combinatorics	334
<i>de Lima, A. and Smania, D.</i> On infinitely cohomologous to zero observables	375
<i>Deroin, B.</i> The Poisson boundary of a locally discrete group of diffeomorphisms of the circle	400
<i>Dias, K.</i> Enumerating combinatorial classes of the complex polynomial vector fields in \mathbb{C}	416
<i>Fiebig, D.</i> Canonical compactifications for Markov shifts	441
<i>Gomes, J. B. and Ruggiero, R. O.</i> On Finsler surfaces without conjugate points	455
<i>Haydn, N., Nicol, M., Persson, T. and Vaienti, S.</i> A note on Borel–Cantelli lemmas for non-uniformly hyperbolic dynamical systems	475
<i>Kida, Y.</i> Examples of amalgamated free products and coupling rigidity	499
<i>Kloeckner, B.</i> Optimal transport and dynamics of expanding circle maps acting on measures	529
<i>Kosloff, Z.</i> The zero-type property and mixing of Bernoulli shifts	549
<i>Liang, C., Sun, W. and Tian, X.</i> Ergodic properties of invariant measures for $C^{1+\alpha}$ non-uniformly hyperbolic systems	560
<i>Liao, L. and Seuret, S.</i> Diophantine approximation by orbits of expanding Markov maps	585
<i>Navas, A.</i> An L^1 ergodic theorem with values in a non-positively curved space via a canonical barycenter map	609
<i>Zhang, Y. and Lin, C.</i> Invariant measures with bounded variation densities for piecewise area preserving maps	624
<i>Bowen, L. and Gutman, Y.</i> Nonabelian free group actions: Markov processes, the Abramov–Rohlin formula and Yuzvinskii’s formula – CORRIGENDUM	643
