ANOTHER UNEVENTFUL DAY.

DILANTIN

(phenytoin)

Start with it. Stay with it.

DILANTIN* (phenytoin) is a drug of first choice for controlling generalized tonic clonic seizures.

No other antiepileptic is more widely prescribed¹.

No other antiepileptic has been the subject of more extensive clinical studies?

And no other antiepileptic boasts a more simplified medication schedule.

The slow absorption of Dilantin Capsules allows a single daily dose for maintenance therapy in many adults, once the divided dose of three 100 mg capsules has adequately controlled seizures.

*Reg. T.M. Parke, Davis & Company, Parke-Davis Canada Inc., auth. user

New **Tegretol**[®] **Chewtabs**[™] (carbamazepine)

100mg and 200mg*

- the only chewable carbamazepine
- easier titration for both children and adults
- increased convenience provided by an easily administered chewable formulation
- improved compliance arising from a pleasant tasting cherry-mint flavour

Now indicated in children aged 6 years and over
