

Instructions to Contributors

Full Directions to Contributors, of which this is a summary, can be found at the following web site
http://titles.cambridge.org/journals/journal_catalogue.asp?mnemonic=dar

General

The *Journal of Dairy Research* publishes reports on all aspects of dairy science from any country. Material for publication should be sent to the Editor: **DG Chamberlain, Hannah Research Park, Mauchline Road, Ayr KA6 5HL, UK.** Receipt of all material will be acknowledged. Submission of a paper will be taken to imply that it reports original unpublished work, that it is not under consideration elsewhere, and that if accepted by the Journal it will not be published elsewhere in any language without the consent of the Editors. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

Submission of Papers

Papers should be written in English using the spelling of the Concise Oxford Dictionary and should as far as possible be comprehensible to the non-specialist reader. They should be concise, but without omitting necessary material, and contain sufficient detail to allow repetition of the work.

Papers may be submitted electronically. The summary should be included as a separate Word file suitable for distribution to potential referees. Electronic submissions may be sent by post on disc or as e-mail attachments (jdr@hannahresearch.org.uk) a Word document file. Submitted manuscripts must be limited in length to a maximum of 6000 words allowing 250 words per fig or table. This is approximately the equivalent of a Word document of 18 A4 pages of doublespaced 12pt Times New Roman font.

Layout of Papers

Authors should consult the most recent issue of the Journal to familiarize themselves with Journal conventions and layout. Attention to these and other details will speed publication.

The paper should generally be divided as follows. (a) **Cover sheet** with the title of the article, names of authors each with one forename, together with their affiliations, a shortened version of the title suitable as a heading, and the name, postal address and e-mail address for correspondence. (b) A brief **Summary** should encapsulate the whole paper, showing clearly the new knowledge acquired. (c) The **introduction**, without heading, should not contain a full literature review, but should indicate why the subject of enquiry is interesting or important, and why the authors have chosen the approach described. (d) The Experimental or **Materials and Methods** section should contain adequate descriptions of procedures or appropriate references; sources of all materials (including address with post code) and sources or strains of animals, microorganisms and so on should be indicated. (e) **Results** should be as concise as possible, without repetition or inclusion of irrelevant material. Tables and illustrations should be used efficiently. (f) The **Discussion** should not repeat the results but discuss their significance. A combined **Results and Discussion** section is quite acceptable. Any acknowledgements are given in a separate paragraph without heading. It is the responsibility of the authors to ensure that individuals or organizations acknowledged as providing materials or otherwise are willing to be identified. (g) **References**. For some types of paper, other divisions may be preferable. **Pages** should be numbered; the addition of line numbers will aid refereeing.

References

References should be given in the text as Brown & Jones (1987) or (Schmidt, 1985; Nakamura et al. 1989); the first author with

et al. is used for papers with three or more authors. Where necessary, papers are distinguished as Lenoir (1988a), (Litov et al 1990a, b). When several references appear together in the text, cite them in chronological order, and alphabetically within years. The Reference list at the end of the paper, which should begin on a fresh page, is given in strict alphabetical order. Authors should refer to a recent issue for the format of references.

Tables

Tables should be numbered and carry headings enabling them to be understood without reference to the text. Each Table should be typed on a separate sheet. Symbols for footnotes should be in the order: †, ‡, §, ¶, ††, etc. The use of *, **, etc. should be limited to indicating levels of significance.

Illustrations

Printed originals of figures and photographs should be provided as best possible quality. Figures such as graphs must be supplied in an editable file format, such as Excel. The use of bar graphs and histograms should be restricted, as the information can often be better presented in a table. In the presentation of results, experimental points should be indicated by symbols, used in order: ○, ●, △, ▲, □, ■, ×, +. Scale marks should be on the inside of the axes. Each Figure should be provided with a legend such that with the Figure it is comprehensible without reference to the text. Figure legends should be typed on a separate sheet or sheets, beginning Fig. 1.

Photographs should be glossy black and white prints accompanied by a legend as above. Scale bars on the photograph should be used, not magnifications in the legend. Colour plates can be included but these will normally result in a charge to the authors. Uncompressed electronic copies (e.g. TIFF files) may also be supplied.

Statistical Treatment

Individual results should not normally be given. The methods of statistical analysis should be clearly described; a suitable reference is adequate. Authors should make it clear whether they are quoting (e.g.) SD or SE. Any statement that two groups of values are different should be supported by the level of significance involved, as a single or range of *P* value: (*P* = 0.008) or (*P* < 0.01). Differences should not be claimed or implied if *P* > 0.05.

Gene Sequences

Original DNA sequences reported in JDR must also be submitted to GenBank. Instructions can be found at <<http://www.ncbi.nlm.nih.gov/Genbank/index.html>>

Ethics of Experiments

Authors are expected to adhere to the relevant codes covering human subjects and the use of animals.

Proofs

Authors will be advised when to expect proofs, which should be returned without delay to the appropriate editor. Proofs are sent for the correction of any printer's or editorial errors, not for addition of new material or revision of the text. Excessive alteration may have to be disallowed or made at the authors' expense, and may delay publication. Order forms for offprints are sent with proofs and should be returned directly to The Cambridge University Press.

Journal of Dairy Research

CONTENTS

ORIGINAL ARTICLES

- **The average culling rate of Dutch dairy herds over the years 2007 to 2010 and its association with herd reproduction, performance and health**
NM Nor, W Steeneveld and H Hogeveen 1
- **Administration of antibiotics to ewes at the beginning of the dry-period**
IG Petridis and GC Fthenakis 9
- **Adhesion properties of potentially probiotic *Lactobacillus kefir* to gastrointestinal mucus**
P Carasi, NM Ambrosis, GL De Antoni, P Bressollier, MC Urdaci and M de los Angeles Serradell 16
- **Milking behaviour of buffalo cows: entrance order and side preference in the milking parlour**
A Polikarpus, F Grasso, C Pacelli, F Napolitano and G De Rosa 24
- **Consumption of transgenic milk containing the antimicrobials lactoferrin and lysozyme separately and in conjunction by 6-week-old pigs improves intestinal and systemic health**
CA Cooper, EA Maga and JD Murray 30
- **Feasibility of utilising an infrared-thermographic technique for early detection of subclinical mastitis in dairy camels (*Camelus dromedarius*)**
EM Samara, M Ayadi and RS Aljumaah 38
- **Absence of growth of *Listeria monocytogenes* in naturally contaminated Cheddar cheese**
M Dalmasso and K Jordan 46
- **New infection rate of bovine mammary glands after application of an internal teat seal at dry-off**
V Krömker, NT Grabowski and J Friedrich 54
- **Optimisation of medium composition for probiotic biomass production using response surface methodology**
M Anvari, G Khayati and S Rostami 59
- **Identification of lipid synthesis and secretion proteins in bovine milk**
J Lu, T van Hooijdonk, S Boeren, J Vervoort and K Hettinga 65
- **The influence of protein fractions from bovine colostrum digested in vivo and in vitro on human intestinal epithelial cell proliferation**
AJ Morgan, LG Riley, PA Sheehy and PC Wynn 73
- **Effect of feeding linseed oil in diets differing in forage to concentrate ratio: 1. Production performance and milk fat content of biohydrogenation intermediates of α -linolenic acid**
L Saliba, R Gervais, Y Lebeuf and PY Chouinard 82
- **Effect of feeding linseed oil in diets differing in forage to concentrate ratio: 2. Milk lactone profile**
L Saliba, R Gervais, Y Lebeuf, J-C Vuilleumard, J Fortin and PY Chouinard 91
- **Investigation of the structure of alpha-lactalbumin protein nanotubes using optical spectroscopy**
Ö Tarhan, E Tarhan and Ş Harsa 98
- **Effects of a latency period between pre-stimulation and teat cup attachment and periodic vacuum reduction on milking characteristics and teat condition in dairy cows**
A Vetter, HA van Dorland, M Youssef and RM Bruckmaier 107
- **Use of used vs. fresh cheese brines and the effect of pH and salt concentration on the survival of *Listeria monocytogenes***
BCT Schirmer, E Heir, B-A Lindstedt, T Møretro and S Langsrud 113
- **Effects of rapeseed and soybean oil dietary supplementation on bovine fat metabolism, fatty acid composition and cholesterol levels in milk**
C Altenhofer, M Spornraft, H Kienberger, M Rychlik, J Hermann, HHD Meyer and E Viturro 120
