THE MECHANISTIC CONCEPTION OF LIFE. Biological Essays by
JACQUES LOEB, Head of the Department of Experimental Biology, Rockefeller
Institute for Medical Research.

238 pages, 12mo, cloth; 6s. net.

The achievements of Professor Jacques Loeb in the field of experimental biology have made him so widely known as to ensure any book of his a large circle of readers. His experimental work at the universities of Chicago and California, as well as in his present position, gives this volume an especial significance.

In this his latest work Professor Loeb presents many of the current problems in biology, and discusses the question whether the phenomena of life can be explained by physical and chemical laws. He finds it possible to control by physical or chemical means not merely the processes of reproduction, but also the conduct of animals with reference to environment.

"The profession, as well as everyone interested in biology, will thank the author and the publishers for collecting these essays and placing them before the reading public."—*The New York Medical Journal*

"All eager to know more of the origin of life will find no modern book of its size nearly so instructive or inspiring."—*Johns Hopkins Hospital Bulletin*

The publications of the University of Chicago Press, a full catalogue of which will be sent on application, are sold in the United Kingdom and the British Colonies by

THE JOURNAL OF HYGIENE PLAGUE SUPPLEMENT III EIGHTH REPORT ON PLAGUE INVESTIGATIONS IN INDIA

ISSUED BY THE ADVISORY COMMITTEE APPOINTED BY THE SECRETARY
OF STATE FOR INDIA, THE ROYAL SOCIETY AND THE LISTER
INSTITUTE.

CONTENTS

- LXIV. The influence of cultivation in serum-containing media upon the virulence and immunising properties of the plague bacillus. By S. Rowland. (With Plate XVI)
- LXV. The influence of the medium in which the plague bacillus is propagated upon the facility with which it is ingested by human leucocytes. By R. St John Brooks
- LXVI. The morphology of the plague bacillus. By S. Rowland. (With Plates XVII–XXIII)
- LXVII. Observations on the mechanism of the transmission of plague by fleas. By A. W. Bacot and C. J. Martin. (With Plates XXIV–XXVI and 4 Text-figures)
- LXVIII. Influence of the medium in which *B. pestis* is propagated upon its virulence. By S. Rowland
- LXIX. A study of the bionomics of the common rat fleas and other species associated with human habitations, with special reference to the influence of temperature and humidity at various periods of the life history of the insect. By A. W. Bacot. (With Plates XXVII–XXXIV, 12 Charts and 3 Text-figures)
- LXX. On the survival of bacteria in the alimentary canal of fleas during metamorphosis from larva to adult. By A. W. Bacot
- LXXI. The effect of the vapours of various insecticides upon fleas (*Ceratophyllus fasciatus* and *Xenopsylla cheopis*) at each stage in their life history and upon the bed bug (*Cimex lectularius*) in its larval stage. By A. W. Bacot. (With 1 Text-figure)

The new series of Plague Supplements now being issued are, in pagination, completely independent of the Journal, although subscribers to the latter will receive copies without extra cost. The price to non-subscribers is 7s. net each, parts I and II; 10s. net, part III.
