G. H. GOLUB  
H. B. KELLER  
H.-O. KREISS  
K. W. MORTON  
M. J. D. POWELL  
R. TEMAM

As numerical analysis develops and the number of publications increases, it becomes increasingly difficult to keep up with the latest techniques and developments. These annual volumes will present invited survey papers by the leading researchers in numerical analysis. The papers will present overviews of recent advances in their area and provide "state-of-the-art" techniques and analysis.

Covering the breadth of numerical analysis, each article will be written in a style accessible to researchers at all levels. Broad subject areas for inclusion will be:

- Linear algebra
- Optimization
- ODE's
- PDE's using finite difference, finite element and spectral methods
- Approximation theory
- Computational fluid dynamics
- Nonlinear dynamical systems and bifurcation theory

## Contents of the first issue

Wavelets	R. A. DeVore
Iterative solution of linear systems	G. H. Golub
Problems with multiple time scales	H.-O. Kreiss
Numerical methods for differential-algebraic equations	R. März
Theory of algorithms for unconstrained optimization	J. Nocedal
Symplectic integrators for Hamiltonian problems	J. M. Sanz-Serna
Error analysis of boundary integral methods	I. H. Sloan
Interior methods	M. H. Wright

**These are annual volumes that no numerical analyst should be without.**

**Volume 1 is available now at £19.95 net. Order by 'phone on 0223-325970 or fax 0223-325959, or write to Tom Peacock at the address below.**

**Vol 1: £19.95 net HB 0 521 41026 6  
320 pp. 1992**

**Continuation order subscriptions are available for future volumes.**

**ISSN: 0962 4929**

**c.£19.95 per annual volume**

UNIVERSITY PRESS**

The Edinburgh Building, Cambridge CB2 2RU

#### INSTRUCTIONS TO AUTHORS

*Submission of manuscripts* Papers may be submitted to any member of the editorial board. Three copies should be sent; originals of figures should *not* be included until the paper has been accepted. Papers may be submitted electronically by sending a LaTeX file to [EJAM@UK.AC.OX.VAX](mailto:EJAM@UK.AC.OX.VAX); this file should include the figures (line figures only). Electronic communications can also be used for minor corrections and for messages to the editors.

*Layout of manuscripts* Papers should be typewritten in **double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers must begin with an abstract of not more than 300 words, and they should end with a brief concluding section. The SI system of units must be used throughout. There is no formal restriction on length, but the constraint of fitting an integral number of papers into 96 pages means that short papers (20 typed pages or fewer) are likely to appear sooner than the long ones.

*Illustrations* Figures should be drawn in indian ink on good quality white paper. Wherever possible they will be reproduced with the author's lettering. A list of captions for figures should be attached separately.

Where appropriate, articles may be illustrated by photographs: high-quality glossy black and white prints are necessary.

*References* References should be listed in alphabetical order at the end of the main text. Please include the article title in the reference, which should be in the order: author's surname, initials; year in parentheses; article title; journal name, abbreviated in accordance with the *World List of Scientific Periodicals* (4th Edn); volume number (underlined); inclusive page numbers.

*Citations in the text* Any unambiguous system is acceptable. Three recommended ways of citing a 1992 paper by A. European are: European (1992); European [Eu]; European [7]. In the second case, the reference at the end of the text should be preceded by [EU], and in the third by [7]. Please note that in the third system, alterations may lead to wholesale renumbering.

#### EDITORIAL POLICY

The *European Journal of Applied Mathematics* aims to publish papers in all areas of applied mathematics, with especial emphasis on the following.

- (i) The exposition of new mathematical ideas relevant to the modelling and analysis of modern technological processes.
- (ii) The development of interesting mathematical methods with broad areas of applicability.

There is no restriction in the areas of applicability or the style of mathematics, although standard mathematical techniques will only be published if they are associated with novel applications or lead to substantial advances in established problem areas.

#### COPYING

This journal is registered with the Copyright Clearance Center, 27 Congress Street, Salem, MA 01970. Organisations in the USA who are also registered with the C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per-copy fee of \$5.00. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0956-7925/92 \$5.00 + .00

*ISI Tear Sheet Service*, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorised to supply single copies of separate articles for private use only.

*For all other use*, permission should be sought from the Cambridge or the American Branch of Cambridge University Press.

## CONTENTS

- Two-dimensional slow viscous flows with time-dependent free boundaries driven by surface tension page 193  
S. RICHARDSON
- Complex variable methods in Hele–Shaw moving boundary problems 209  
S. D. HOWISON
- Scale-invariant initial value problems in one-dimensional dynamic elastoplasticity, with consequences for multidimensional nonassociative plasticity 225  
D. G. SCHAEFFER and M. SHEARER
- On the identifiability of steel reinforcement bars in concrete from magnetostatic measurements 255  
H. W. ENGL and V. ISAKOV
- The propagation of turbulent bursts 263  
S. KAMIN and J. L. VAZQUEZ
- Bifurcations in a class of complex differential equations 273  
I. M. MOROZ
- Symmetrization of interface dynamics equations 283  
L. A. ANTONOVSKII
- Existence theorems for boundary value problems in the nonlinear theory of annular elastic membranes 299  
H. GRABMÜLLER and R. PIRNER
