JOURNAL OF PLASMA PHYSICS

https://doi.org/10.1017/S0022377800005808 Published online by Cambridge University Press

JOURNAL OF PLASMA PHYSICS exists for the publication of experimental and theoretical research papers on plasma physics and its applications.

EDITOR

DR J. P. DOUGHERTY

Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge, England

ASSOCIATE EDITORS

PROF. D. BERSHADER

Department of Aeronautics and Astronautics, Stanford University, Stanford, California 94305, *U.S.A.*

PROF. F. D. KAHN

Department of Astronomy, University of Manchester, Manchester 13, *England*

PROF. W. B. THOMPSON

Department of Physics, University of California, La Jolla, California 92038, *U.S.A.*

Authors wishing to have papers published in the JOURNAL should communicate them to any one of the persons named above, choosing one in their own country where possible.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers.

Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 15 in. by 24 in. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript. Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to receive 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

JOURNAL OF PLASMA PHYSICS is published once every two months in January, March, May, July, September and November, by Cambridge University Press, P.O. Box 92, London, NW1 2DB and 32 East 57th Street, New York, N.Y. 10022.

Three parts form a volume. The subscription price of a volume (which includes postage) is £12 net ($37.50 in the U.S.A.). Single parts cost £5 net ($15.50 in the U.S.A.) plus postage.

Copies of the journal for subscribers in the United States of America are sent by air to New York to arrive with minimum delay.

Second class postage paid at New York, N.Y.

CONTENTS TO VOLUME 5

Part 1 January 1971

A weak turbulence analysis of the two-stream instability. D. F. Smith and P. C. W. Fung *page* 1

Time asymptotic perturbation theory in weak plasma turbulence. I. Macroscopic description. K. Elsässer 31

Time asymptotic perturbation theory in weak plasma turbulence. II. Vlasov description. K. Elsässer 39

Interaction of electrostatic waves in collisionless plasmas. G. J. Lewak 51

Stability of the screw pinch with Hall current. S. K. Malik 65

Penetration to second order of an electrostatic field into a warm plasma. E. M. Zawadzki and G. J. Lewak 73

Measurement of microwave reflexion from a longitudinally magnetized plasma-filled co-axial wave-guide. M. L. G. Oldfield and R. N. Franklin 89

Parametric excitation in an inhomogeneous plasma. C. S. Chen 107

The contribution of electronic excitation to the total specific heats of high temperature gases: a misinterpreted absence. M. Capitelli and E. Ficocelli 115

Note on the existence of stationary shockwaves in collisionless plasmas. D. Pfirsch and K. Schindler 123

Comment on negative diffusion coefficients in quasi-linear theory. D. Montgomery and S. Bodner 131

Reply to the 'Comment on negative diffusion coefficients in quasi-linear theory' by D. Montgomery and S. Bodner. I. B. Bernstein and J. P. Klozenberg 135

Comment on revised quasi-linear equations dealing with wave-number spectra. B. Abraham-Shrauner 137

Quasi-linear theory in the non-resonant region. S. E. Bodner 141

On resonance of a plane plasma condenser in crossed electric and magnetic field. N. A. Nikolov 145

Part 2 March 1971

Effect of spatially uniform external periodic magnetic field on wave propagation through a hot electron plasma. K. P. Das 151

Non-linear Landau damping of electromagnetic cyclotron waves. Jibayo Akinrimisi and R. N. Sudan 161

https://doi.org/10.1017/S0022377800005808 Published online by Cambridge University Press

The structure of hydromagnetic shock waves. R. J. Bickerton, L. Lenamon and R. V. W. Murphy *page* 177

Non-linear wave particle processes in an electrostatic wave packet. D. Nunn 199

Theory and numerical solutions of sheath growth in a low-pressure plasma. A. G. Jack, K. F. Sander and R. H. Varey 211

Scattering from magnetic fluctuations. William B. Thompson 225

Magnetic surfaces in a quadrupole. J. H. Williamson 229

Electrostatic oscillations in cold inhomogeneous plasma. I. Differential equation approach. Z. Sedláček 239

The interaction of homogeneous wave turbulence and a magnetohydrodynamic tangential discontinuity. C. K. W. Tam 265

The hydromagnetic Kelvin–Helmholtz problem in a Hall plasma. J. F. McKenzie 275

Review

Plasma Dynamics, by T. J. M. Boyd and J. J. Sanderson 289

Part 3 June 1971

Effect of ion motion on parametric oscillations of a cold plasma in a magnetic field. R. Prasad 291

Geometric optics in an ideal magnetohydrodynamic fluid. I. B. Bernstein 303

Relativistic kinetic theory of the large-amplitude transverse Alfvén wave. A. Barnes and G. C. J. Suffolk 315

On the effect of stochastic rf-fields on the stability of plasma. L. Krlín 331

The effects of ion-ion collisions on a ion-acoustic plasma pulse. M. S. Espedal 343

Stability of parametrically excited drift waves. J. G. Siambis 357

The gravitational instability of a rotating magnetoplasma in the guiding centre approximation. A. D. Lunn 365

Linear stability of exponential density profiles. R. Croci and R. Saison 375

Electron cyclotron echoes from plasma. R. L. Bruce 385

Non-linear interaction between three ordinary electromagnetic waves. L. Stenflo 413

Study of the oscillations stimulated at the upper hybrid resonance by a pulsed dipole antenna in weakly inhomogeneous plasma. P. Graff 427

Interaction of test particles with a plasma. E. W. Laing, A. Lamont and P. J. Fielding 441

Growth rates of plasma oscillations for symmetrical double-humped velocity distributions. K. Nishimura 455

https://doi.org/10.1017/S0022377800005808 Published online by Cambridge University Press

Coherent ion plasma oscillations in a d.c. corona discharge in rarefied air. P. LILIENFELD *page* 459

Magnetic stabilization of transverse plasma instabilities. B. BUTI and G. S. LAKHINA 467

Effects of electron–electron Coulomb interactions in low-voltage neon discharges. D. T. SHAW 475

CORRIGENDUM 483

INDEX TO VOLUME 5 484

https://doi.org/10.1017/S0022377800005808 Published online by Cambridge University Press
