

Yorick's World

Science and the Knowing Subject

by **PETER CAWS**

"These essays are the work of a genial, literate mind exploring a wide range of issues mainly centered on the philosophy of science and epistemology. . . . He has a knack for deflating the latest fashionable claims early in the game, even before fashion has set in."—Marx Wartofsky, Editor, *The Philosophical Forum*

VALIDATION IN THE CLINICAL THEORY OF PSYCHOANALYSIS

NEW!

A Study in the Philosophy of Psychoanalysis

by Adolf Grünbaum

"The most formidable among the skeptics, who has made the credibility of Freudian science (or lack of it) into an obsessive concern for a decade, is the philosopher Adolf Grünbaum."
—Peter Gay, Yale University

Well over one half of this magisterial new volume constitutes a major sequel to Grünbaum's highly influential 1984 book *The Foundations of Psychoanalysis: A Philosophical Critique*, which Sidney Hook said "has initiated a new era in the discussion of the topic" and Richard W. Miller in the *Canadian Journal of Philosophy* called "the most sustained and powerful effort in our time to make the philosophy of science useful, useful in the pursuit of theories and evidence, and useful in the relief of suffering."

Also hailing *Foundations*, Hans J. Eysenck wrote "it goes to the roots of psychoanalysis in a manner which other philosophers have tried to do, but have conspicuously failed to achieve . . . a brilliant book by a razor-sharp intellect. . . the most important discussion of the topic . . ." Morris Eagle in *Philosophy of Science* termed it "a devastating critique of hermeneutic conceptualizations and formulations."

Now in this essential new volume Grünbaum—winner of Italy's 1989 Fregene Prize for outstanding achievement in the philosophy of science—goes far beyond that earlier book to offer new original ideas on such fundamental themes as: the psychoanalytic theory of transference, the investigative viability of the single-subject case study method, the placebo concept across *all* of medicine and psychotherapy, Freud's triadic *psychology* of religious belief in theism, the dream theory, etc.

" . . . brilliant and incisive critical analysis of the nature of the scientific enterprise within psychoanalysis. . . in a series of superbly reasoned and vigorously argued papers, Grünbaum established a new level of criticism that . . . demonstrates his superior sophistication about psychoanalysis compared with those philosophers who participated in the celebrated debates of 1959."
—Philip S. Holzman, Harvard University
