children's hospital

WORKING TOGETHER TO IMPROVE OUTCOMES IN CH

Whether helping to bring you this educational supplement or medical technology to enhance care, Somanetics is pleased to partner with Cardiology in the Young. Our mission is to help you improve outcomes, and perhaps no where is that more desired than in children struggling with congenital heart disease.

Our noninvasive INVOS® System can help you detect *site-specific* oxygen deficits associated with low cardiac output, 1 renal dysfunction, 2 neurologic damage,³ shock⁴ and seizures⁵. It can also provide you earlier intervention opportunities than metrics such as mean arterial pressure, pulse oximetry, arterial blood gases and lactates^{6,2,4}. Our end goal is your end goal; to improve survival and quality of life for these children.
