## NEW FROM MRS ...

### Better Ceramics Through Chemistry V

(1992 MRS Spring Meeting, San Francisco, California)

Editors: M.J. Hampden-Smith, W.G. Klemperer, C.J. Brinker

The application of chemical principles and practices to ceramic processing has mushroomed during the past decade, and the Materials Research Society's *Better Ceramics Through Chemistry* symposia have chronicled this growth biennially. As in the previous books, this volume has as its focus sol-gel processing of oxide ceramics. In addition, however, considerable space is devoted to recent advances in related systems such as metal nitrides, carbides, and borides, polymer precursors, and cement composite materials, as well as other synthesis techniques such as chemical vapor deposition, aerosol routes and electrochemical processing. This book is designed to provide both a retrospective and a preliminary view of exciting new results of mutual interest to ceramists and chemists. 1992, hardcover, 138 papers, 967 pages.

ISBN: 1-55899-166-2
