## Book Reviews

THE CNS IN ACTION THE OLFACTORY SYSTEM #3. 1999. Edited by Dr. Louise Charron, Dr. Jean-Marie Peyronnard. Published by SSB Multimedia Health Sciences. CD ROM media C\$123.50 approx.

This compact disk offers a detailed presentation on both the anatomy and neurobiology of the olfactory system. The target population for such a deep account of the olfactory system would be ENT, neurology, neurosurgery trainees, as well as certain persons in olfaction research.

The layout was logical and systematic with bright and

colourful pictures. It is indeed very helpful to be able to select areas of interest by the click of a mouse.

There are a few areas that could be improved. Firstly, the cost. At \$123.50, it is quite prohibitive to most persons in training. This is particularly so as it only covers a small area of anatomy (albeit well).

Secondly, it took quite a few tries to get this program started. A short note on how to initiate "Quicktime", and the program itself, would be greatly appreciated by most with limited computer skills.
