## Aims and scope

The aims and scope of *The Aeronautical Journal* are intended to reflect the objectives of the Royal Aeronautical Society as expressed in its Charter of Incorporation. Briefly, these are to encourage and foster the advancement of all aspects of aeronautical and space science. Thus the topics of *The Aeronautical Journal* include most of those covered by the various Specialist Groups of the Society, which include:

Aircraft design, aerodynamics, air law, air power, air transport, air navigation, airworthiness and maintenance, aviation medicine, avionics and systems, environmental issues, flight operations, flight simulation, fluid dynamics, fluid mechanics, general aviation, guided flight, human factors, human powered flight, light aviation, management studies, propulsion, rotorcraft, safety, space, structures and materials, structural mechanics, systems and test procedures and UAVs.

Papers are therefore solicited on all aspects of research, design and development, construction and operation of aircraft and space vehicles. Papers are also welcomed which review, comprehensively, the results of recent research developments in any of the above topics.

We recognise the inhibiting pressures of time and confidentiality and acknowledge that many of the design testing, manufacturing and operational problems that industry has to solve contain important information for the whole aerospace community. *The Aeronautical Journal* provides a platform for refereeing and presenting your work to an international audience.

Papers will be considered for publication in *The Aeronautical Journal* if they meet the terms and conditions listed in The Instructions for authors. If these are not met, the Editor reserves the right to withdraw the paper without redress, which may be at any time up to publication.

Papers should be sent to: Prof Peter Bearman, Royal Aeronautical Society, No. 4 Hamilton Place,  
London W1J 7BQ, United Kingdom or [wayne.davis@aerossociety.com](mailto:wayne.davis@aerossociety.com)

# CONTENTS

Volume 116 Number 1185

November 2012

**S. Anderson, J. Cooper, N. Gudde and J. Howes**

Aviation renewable fuels: technical status and challenges for commercialisation 1103

**A. Omran and B. Newman**

Analytical Volterra-based models for nonlinear low order flight dynamics approximation systems 1123

**S.J. Hodge, J.S. Forrest, G.D. Padfield and I. Owen**

Simulating the environment at the helicopter-ship dynamic interface: research, development and application 1155

**Y.T. Ng**

Characterising low-speed, transitional cavity flow 1185

**M.M. Lone, N. Ruseno and A.K. Cooke**

***Technical Note***

Towards understanding effects of non-linear flight control system elements on inexperienced pilots 1201

**S. Punniyakotti and J.L. Stollery**

The estimation of aerodynamic forces on flat plate aerofoils at hypersonic and supersonic speed 1207
