ADVERTISEMENTS

# The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR  
LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgment must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks will normally be held by the Printers for three years, after which they will be destroyed. Any author is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2. Coloured illustrations will be charged to authors, unless a special grant is authorized by the Editor.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is five guineas sterling (U.S.A. \$15) post free, and payable in advance.

9. Single copies will be on sale at 12s. 6d. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

#### *United States of America*

Orders for this *Journal* may be sent through local booksellers, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

## THE DROP THAT SOOTHES THE INFECTED EAR

'Otosporin' rapidly destroys virtually *all* bacteria commonly found in ear infections, reduces irritation, inflammation and pain. 'Otosporin' brand Drops contain polymyxin B sulphate, neomycin sulphate and hydrocortisone in a bland suspension designed to facilitate penetration. Issued in bottles of 5 ml.

# ORBENIN

## and its success in Gram-Positive Infections

### Otitis media Otitis externa

Boils  
Carbuncles  
Infected dermatoses

Pneumonia  
Lung abscess  
Acute bronchitis

Osteomyelitis  
Osteitis

### Tonsillitis Pharyngitis

Post-operative wound infections  
Burns  
Skin graft protection

Septicaemia  
Acute endocarditis

Staphylococcal enterocolitis  
Staphylococcal urinary tract infections  
Staphylococcal meningitis

ORBENIN (cloxacillin sodium B.P.) is a penicillin active against virtually all Gram-positive organisms, including staphylococci,  $\beta$ -haemolytic streptococci and pneumococci, irrespective of their resistance to other antibiotics.

It is encouraging that the widespread use of Orbenin in hospitals has not resulted in the emergence of resistant strains.

More than 300 references in the World Literature testify to the excellent clinical results obtained with Orbenin in a wide variety of Gram-positive infections.

Detailed literature is available on request.

### Dosage:

Two capsules (500mg.) or one vial (250mg.) q.i.d.

### Availability:

Capsules  
(250mg.)

Vials  
(250mg.)

Syrup  
(125mg./  
5ml.)

# **BÉKÉSY ACCESSORY**

For the very first time a fully automatic unit has been made available for a Clinic Audiometer, making the combined units into a true BÉKÉSY Audiometer.

This automatic accessory is being made for the PETERS SPD/5 CLINIC AUDIOMETER, which has a continuous frequency range and continuously variable attenuation. The result is therefore a true Békésy audiometer.

It can be attached to or detached from the audiometer in under one minute so that the two units together offer the facilities of an advanced clinic audiometer or Békésy audiometry at will.

It can be fitted to any existing SPD/5 Audiometer.

Please write for full details and demonstration to :

**FROM  
THE  
FRONT**

*...and with A.V.C. where required*

—that is the triumph of the  
**MACKIE**  
hearing aid

The new Mackie post-aural hearing aid is made in several different circuit versions so that the gain and frequency response can be selected to match the patient's needs; and it is available where required with a unique form of automatic volume control which has proved highly successful in cases of recruitment. The forward pick-up microphone gives maximum

intelligibility of speech without background interference.

It is exported to many countries including the United States of America—a tribute to its high quality and advanced design.

In Great Britain it is available for trial by your patients from *independent* hearing aid dealers in all parts of the country.

## What makes this antibiotic so valuable in the ENT unit ?

### Spectrum ?

Exceptionally broad. It covers most gram-positive organisms—including the penicillin-resistant staphylococci—and many gram-negative organisms.

### Action ?

Intensely bactericidal. It gives a rapid kill of bacteria at or near the minimum inhibitory concentration, especially in the case of gram-negative organisms.

### Safety ?

Wide clinical usage has confirmed the laboratory evidence that Ceporin has a remarkably low toxicity. It is usually well tolerated by patients allergic to penicillin.

### Clinical record ?

The latest analysis of clinical results obtained with Ceporin shows a total of 131 ENT infections treated: 109 (83%) responded satisfactorily. There were 28 cases of tonsillitis, of which 24 responded well. The majority of these infections was caused by beta-haemolytic streptococci, but there were several mixed infections involving streptococci, staphylococci and *Corynebacterium diphtheriae*.

Otitis also responded well. Of the 28 cases treated, 24 responded satisfactorily. Most of these infections were caused by staphylococci but infections involving coliforms, pneumococci, *Streptococcus pyogenes*, proteus and *Haemophilus influenzae* were also represented. Often rapid clinical response was obtained with Ceporin after other antibiotics had failed. Conditions which respond well to Ceporin include: mastoiditis, otitis media, sinusitis, quinsy, pharyngeal abscess, and intracranial infections secondary to infected sinuses and mastoiditis. Because of its three main attributes—broad spectrum, bactericidal action and low toxicity—Ceporin has proved valuable for use in place of more toxic drugs or combinations of antibiotics. **Presentation** Vials containing 250 mg, 500 mg and 1 gram of cephaloridine, packed singly and in boxes of five.

Ceporin is a Glaxo trade mark

Detailed literature is available from Glaxo Laboratories Limited Greenford, Middlesex
