Lepidoptera Genetics

Roy Robinson

Contains an account of world-wide genetic and karyological studies with Lepidoptera species, with chapters on the structure and physiology of this order and the concepts/techniques of genetics. Introduces the systematic collection of investigations in Lepidoptera which is supported by the complete bibliography of papers published in this field.

Genetics for Cat Breeders

Roy Robinson

Provides, in an essentially elementary treatment, the fundamentals of Mendelian inheritances and scientific animal breeding that a cat breeder or fancier would find useful. The author has written this book from the conviction that only the art of breeding reinforced by a knowledge of genetics and the techniques of modern animal breeding, can lead to improvement once the basic needs of the cat in diet, shelter and health are satisfied. In scope, it covers basic genetics, reproduction and breeding practice, making it a useful source book for more advanced work.

Genetic Counselling in Relation to Mental Retardation

Symposium No. 2

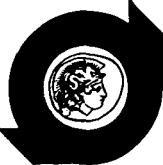

Edited by J.M. Berg. *The Kennedy-Galton Centre for Mental Retardation, Research and Diagnosis, near St Albans*

This, the second in a series of symposia to be published on behalf of the Institute for Research into Mental Retardation, considers from different but complementary standpoints the general question of genetic counselling in relation to mental retardation.
