

# INSTRUCTIONS FOR CONTRIBUTORS

## *Editorial Policy*

The journal welcomes high quality contributions on topics closely related to dynamical systems and ergodic theory. Submissions in the field of differential geometry, number theory, operator algebra, differential, topological, symbolic, measurable dynamics and celestial and statistical mechanics are especially welcome. Expository survey papers and reviews of relevant books will be published from time to time.

## *Submission of manuscripts*

Manuscripts should be submitted via the website: <http://mc.manuscriptcentral.com/etds>.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

The journal strongly recommends submission of accepted papers in L<sup>A</sup>T<sub>E</sub>X using the ETDS L<sup>A</sup>T<sub>E</sub>X class file. Papers that use this class file will be processed more efficiently. A L<sup>A</sup>T<sub>E</sub>X2e file `etds.cls` is available via anonymous ftp from the Cambridge University Press site at <ftp.cup.cam.ac.uk> in the directory `/pub/texarchive/journals/latex/etds-cls/`. In case of difficulties with these files, please contact [etds@sunrise-setting.co.uk](mailto:etds@sunrise-setting.co.uk) or the Journal editorial office at [etds@maths.warwick.ac.uk](mailto:etds@maths.warwick.ac.uk). Alternatively, authors may use 'article' style.

On acceptance of a paper, authors should upload the L<sup>A</sup>T<sub>E</sub>X source code including the figures (line figures only) and all author-defined macro and style files, together with a pdf produced using the same file, via the submission site <http://mc.manuscriptcentral.com/etds>.

The publisher reserves the right to typeset any article by conventional means if the author's T<sub>E</sub>X code presents problems in production.

## *Manuscript*

Papers should be typed with generous margins. The pages must be numbered.

The first page should give the title, the author's name and institution, and a short abstract intelligible to mathematicians.

The title, while brief, must be informative (e.g. 'A new proof of the ergodic theorem', whereas 'Some applications of a theorem of Birkhoff' would be useless).

## *Notation*

Avoid abbreviations such as Thm, Prop., Eq., iff. In the text do not use symbols  $\forall$ ,  $\exists$ ,  $\Rightarrow$  and  $\Leftrightarrow$ . Fractions are generally best expressed by a solidus. Complicated exponents like  $\exp\{z^2 \sin \theta / (1 + y^2)\}$  should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.  
If an author wishes to mark the end of the proof of a theorem, the sign  $\square$  may be used.

Footnotes should be avoided.

## *Figures*

Graphics should be prepared to professional standards, preferably using Postscript or L<sup>A</sup>T<sub>E</sub>X drawing facilities. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the manuscript. Figures should be used sparingly and only when they greatly clarify the exposition. The preferred resolutions for submission of electronic artwork are: halftone images 300 dpi; line tone 600 dpi; bitmap 1200 dpi.

## *Tables*

Tables should be numbered (above the table) as Table 1, Table 2, ... Indicate the position of each in the text as for figures.

## *References*

References should be collected at the end of the paper numbered in alphabetical order of the author's names or by order of citation. Include in the list of references only those works that are cited. For the style of references please consult recent issues of the journal. A reference to a book should give the title, in italics, and then in roman type the publisher's name and the place and year of publication:

[4] N. Dunford and J. T. Schwartz. *Linear Operators*. Part I. Wiley, New York, 1958.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Journal titles should be abbreviated as in *Mathematical Reviews*:

[6] J. E. Littlewood. The 'pits effect' for functions in the unit circle. *J. Analyse Math.* **23** (1970), 236–268.

## *Proofs*

Authors receive one pdf proof for correction. Typographical and minor corrections only are permitted at this stage. For papers with more than one author the proofs are sent to the first named author unless the editor receives other instructions. It is important that proofs are corrected and returned promptly.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see [www.fsc.org](http://www.fsc.org) for information.

# *Ergodic theory and dynamical systems*

VOLUME 40 PART 5 MAY 2020

## CONTENTS

<i>Ashwin, P., Goetz, A., Peres, P. and Rodrigues, A.</i> Embeddings of interval exchange transformations into planar piecewise isometries	1153
<i>Bekka, B. and Francini, C.</i> Spectral gap property and strong ergodicity for groups of affine transformations of solenoids	1180
<i>Connell, C., Nguyen, T. and Spatzier, R.</i> Hyperbolic rank rigidity for manifolds of $\frac{1}{4}$ -pinched negative curvature	1194
<i>David, O. and Shapira, U.</i> Equidistribution of divergent orbits of the diagonal group in the space of lattices	1217
<i>Farsi, C., Gillaspy, E., Jorgensen, P., Kang, S. and Packer, J.</i> Monic representations of finite higher-rank graphs	1238
<i>Glasner, E. and Glasner, Y.</i> A metric minimal PI cascade with $2^{\mathfrak{c}}$ minimal ideals	1268
<i>Gorbovickis, I. and Yampolsky, M.</i> Rigidity, universality, and hyperbolicity of renormalization for critical circle maps with non-integer exponents	1282
<i>Mierczyński, J.</i> The $C^1$ property of convex carrying simplices for competitive maps	1335
<i>Pawliuk, M. and Sokić, M.</i> Amenability and unique ergodicity of automorphism groups of countable homogeneous directed graphs	1351
<i>Teixeira, P.</i> On the conservative pasting lemma	1402
